Twenty-Second Annual Report

OF THE

**HYDRO-ELECTRIC POWER
COMMISSION**

OF THE

PROVINCE OF ONTARIO

FOR THE YEAR ENDED OCTOBER 31st

1929

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO

ONTARIO

HYDRO-ELECTRIC POWER COMMISSION
OF ONTARIO

CHARLES A. MAGRATH.....*Chairman*

HON. J. R. COOKE, M.L.A.....*Commissioner*

C. ALFRED MAGUIRE.....*Commissioner*

W. W. POPE.....*Secretary*

F. A. GABY, B.A.Sc., D.Sc.....*Chief Engineer*

To His Honour THE HONOURABLE WILLIAM D. ROSS,

Lieutenant-Governor of Ontario.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present to your Honour the Twenty-second Annual Report of the Hydro-Electric Power Commission of Ontario for the fiscal year ending October 31, 1929.

This Report covers all of the Commission's activities and also embodies the financial statements for the calendar year 1929, of the municipal electric utilities operating in conjunction with the various systems of the Commission and supplying electrical service to the citizens of the Province.

Dealing, as it does, with a multiplicity of activities relating to several electrical systems obtaining power from thirty-two hydro-electrical plants operated by the Commission, supplemented by power purchased from other sources, and recording financial and other data relating to the individual local municipal electric utilities, the Annual Report presents a large amount of statistical information, much of which must, of necessity, be of a summary character.

The financial statements, the statistical data and the general information given, however, are so arranged and presented as to convey a comprehensive outlook on the features of the Commission's operations. Not only does the Report record the progress made during the past year, but it gives, in addition, certain cumulative results for the various periods during which operation has been maintained in the respective municipalities.

The constructional activities of the Commission during 1929 were featured by a number of outstanding developments and expansions. In the Niagara system the tenth generating unit was ordered for Queenston generating station and the final extension to the power house to accommodate this unit is well under way. The third and fourth banks of transformers and synchronous condensers were ordered for Toronto-Leaside transformer station. The 220,000-volt transmission line conveying power from the Gatineau river plants has given good service and the westerly half of the second circuit, constructed on separate towers, has been completed and placed in operation. A two-circuit 110,000-volt steel-tower line was constructed and placed in service from a point near Queenston to St. Thomas. This will reinforce the power supply and improve voltage conditions in the western section of the Niagara system. In the Georgian Bay system, the generating station at Trethewey Falls was placed in operation and two small generating stations at Bala in the district of Muskoka were purchased and improved.

In the newly-formed Eastern Ontario system, which is a consolidation of the former Central Ontario and Trent, St. Lawrence and Rideau systems, additions were made to the high-voltage network which serves the dual purpose of linking together the three former systems and of connecting the several

divisions of the present system with new large sources of power received at Ottawa over the transmission lines from the Gatineau river plants. The physical interconnection of these three systems forms an extensive network which in point of area comprised—but not, of course, in population served or load carried—approaches that of the Niagara system.

In the Nipissing system, the new generating station at Elliott Chute was placed in operation. In the Thunder Bay system, progress was made on the new development at Alexander on the Nipigon river. This will have an installed capacity of 54,000 horsepower and is being pushed ahead to completion. The development involves the construction of a large semi-hydraulic-fill dam, the first of this type constructed by the Commission. In the Patricia district the Commission has constructed a development at Ear Falls at the foot of Lac Seul on the English river. This has an installed capacity of 5,000 horsepower.

The operation of the systems in general has been characterized by expansion, many lines and power stations being placed in operation to serve new territory and to improve the service in areas already supplied, and the amount of power delivered greatly exceeding the load carried by the Commission in any previous year. The dry summer affected the stream flow and generating capacity of plants in many parts of the Province, necessitating special arrangements to carry the load, but the Commission was able to meet all demands, partly through the transfer of surplus power on some systems to meet the needs of others. Apart from the difficulty presented by a rapid increase in load with unusually low stream flow, the operation of the systems has been carried on successfully and uneventfully, the Commission's plants functioning smoothly and without any major failures of equipment. All necessary inspection and repair work has been carried out to maintain these plants in efficient condition to meet future demands.

During the year the Commission has given further consideration to the problem of providing satisfactory electrical service to the municipalities and industrial organizations of northern Ontario, particularly in the mining districts of Sudbury and Red Lake. In the former area the Commission has acquired the majority stock and thus obtained control of the Wahnapiatae Power Company which has a capital of \$1,180,000. The properties include three hydro-electric generating stations with installed capacities aggregating 10,700 horsepower, and a network of transmission lines supplying service to Sudbury and several mines adjacent thereto. In the Patricia district the development already referred to, constructed by the Commission at Ear Falls, will serve the mining district of Red Lake. The ultimate capacity of the site is estimated to be 30,000 horsepower.

COST OF ELECTRICAL SERVICE FURNISHED BY THE COMMISSION

The function of the Commission is not only to use its best endeavours to provide for the people of Ontario, at cost, an adequate and reliable supply of electrical energy, but also to ensure that the cost of that electrical energy to the consumers shall be the minimum consistent with the financial stability of the enterprise. The success that has been attained in the accomplishment of the latter object may be appreciated by a careful study of the statistical data relating to the supply of electrical energy to consumers as given in Statement "D" and the actual rates to consumers as presented in Statement "E," in conjunction with the various financial statements of the Report.

GROWTH IN LOAD

The following tabulation shows the growth in load in the various systems during the year.

DISTRIBUTION OF POWER TO SYSTEMS

20-MINUTE PEAK HORSEPOWER

SYSTEM COINCIDENT PEAKS

System	October	December	October	December
	1928	1928	1929	1929
Niagara system.....	879,337	894,772	949,732	970,509
Georgian Bay system.....	20,082	21,595	22,118	22,961
Eastern Ontario system.....	60,740	63,614	62,035	65,938
Ottawa system.....	20,241	21,213	22,079	23,050
Thunder Bay system.....	48,910	66,300	77,117	64,588
Nipissing system.....	3,170	3,248	3,599	3,492
Total.....	1,032,500	1,070,742	1,136,689	1,150,538

FINANCIAL SUMMARIES

It will be observed that the financial statements embodied in this Report are presented in two main divisions, namely, a division—Section IX—which deals chiefly with the operations of the Commission in the generation, transformation and transmission of electrical energy *to the co-operating municipalities*, and a division—Section X—which deals with the various operations of the municipal electric utilities in the localized distribution of electrical energy *to consumers*.

The cumulative results to date of the operation of the several systems of the Commission as set forth in this Report demonstrate a healthy financial condition.

The total investment of the Hydro-Electric Power Commission of Ontario in power undertakings and hydro-electric railways is \$222,082,637.06, and the investment of the municipalities in distributing systems and other assets is \$92,154,280.86, making in power and hydro-electric railway undertakings a total investment of \$314,236,917.92. The total revenue derived from the operation of these properties aggregated \$39,969,624.83 in the fiscal year 1929.

CAPITAL INVESTMENT

The following statement shows the capital invested in the respective systems and municipal undertakings:

Niagara system.....	\$168,004,159.13
Georgian Bay system.....	6,310,031.95
Eastern Ontario system.....	18,045,388.36
Madawaska system.....	1,864,647.32
Ottawa system.....	537,194.40
Thunder Bay system.....	15,325,411.00
Northern districts.....	1,565,754.37
Hydro-electric railways.....	7,259,996.73
Office and service buildings, construction plant, inventories, etc.....	3,170,050.80
	\$222,082,637.06
Municipalities' distributing systems and other assets (exclusive of \$14,754,865.40 of municipal sinking fund equity in H.E.P.C. system— all systems.....)	92,154,280.86
	\$314,236,917.92

COMBINED REVENUE

As usual the Commission is able to report that the revenue obtained from the consumers has been more than sufficient to meet the full cost of generating and transmitting the electrical energy as well as to provide for all operating expenses and fixed charges of the municipal utility equipments.

The following statement shows the combined revenue of the Hydro-Electric Power Commission and the municipal electric utilities:

Revenue of the Hydro-Electric Power Commission:

From the municipal electric utilities, rural power districts,
hydro-electric railways and other power customers—

Niagara system.....	\$20,231,830.28	
Georgian Bay system.....	799,343.17	
Eastern Ontario system.....	2,561,774.89	
Ottawa system.....	243,777.52	
Thunder Bay system.....	1,454,080.66	
Bonnechere storage.....	4,144.31	
		\$25,294,950.83

From rural consumers:

Niagara rural power districts.....	\$1,432,978.27	
Niagara rural lines.....	3,889.67	
Georgian Bay rural power districts....	74,225.78	
Georgian Bay rural lines.....	288.75	
Eastern Ontario rural power districts..	150,323.11	
Ottawa rural power districts.....	26,928.28	
		1,688,633.86

\$26,983,584.69

From hydro-electric railways:

Sandwich, Windsor & Amherstburg Ry.	\$1,241,041.79	
Guelph Radial Railway.....	117,947.81	
		1,358,989.60

Total revenue of the Commission.....	\$28,342,574.29
Revenue collected by the municipal electric utilities.....	29,206,684.53

Aggregate revenue of the Commission and the municipal electric utilities..... \$57,549,258.82

*Deduct:

Revenue from power supplied to municipal electric utilities.....	\$17,470,930.93	
Hydro-electric railways.....	108,703.06	
		17,579,633.99
Combined revenue.....		\$39,969,624.83

*NOTE: This deduction is made due to the fact that the revenue of the municipal electric utilities is the source from which the Commission is reimbursed for the cost of power supplied to such utilities.

REVENUE OF COMMISSION

The Commission collected from the municipal utilities and other customers, for power supplied, a total sum of \$26,983,584.69. This sum was appropriated to meet all the necessary fixed charges and to provide for the expenses of operation and administration. After meeting all charges there was left a net surplus of \$1,575,225.81.

The following statement summarizes the Commission's collections from municipal electric utilities and other power customers for the year and shows how the collections have been appropriated:

Revenue from municipal electric utilities and other power customers.....	\$26,983,584.69
Appropriated as follows:	
Operation, maintenance, administration, interest and other current expenses.....	\$18,048,129.36
Reserves for sinking fund, renewal of plant and equipment and contingencies and obsolescence.....	7,360,229.52
	<u>25,408,358.88</u>
Net surplus, after providing for all expenses and necessary fixed charges, credited to municipalities and shown in their accounts.....	<u>\$1,575,225.81</u>

RURAL ELECTRICAL SERVICE

During the past few years very substantial progress has been made in Ontario in the field of rural electrification. Practically all rural electrical service is now given through rural power districts which are operated directly by the Commission. There is now more than \$9,300,000 invested in the rural power district systems established by the Commission. Towards this rural work the Ontario Government, pursuant to its policy of promoting the basic industry of agriculture, has, in the form of grants-in-aid, contributed 50 per cent of the costs of transmission lines and equipment, or about \$4,600,000. About 4,835 miles of transmission lines have been constructed to date, of which 1,044 miles were constructed during the past year, a mileage which exceeds that constructed in any former year. There are now more than 37,000 customers supplied in the rural power districts.

MUNICIPAL ELECTRIC UTILITIES

The following is a summation of the year's operation of the local electric utilities conducted by municipalities receiving power under cost contracts with the Commission:

Total revenue collected by the municipal electric utilities.....		\$29,206,684.53
Cost of power.....	\$16,379,162.88	
Operation, maintenance and administration.....	5,116,401.73	
Debtenture charges and interest.....	3,839,897.13	
Depreciation.....	1,469,846.83	
Total.....		<u>26,805,308.57</u>
Surplus for the year, includes surplus from H.E.P.C.....		<u>\$2,401,375.96</u>

RESERVES OF COMMISSION AND MUNICIPAL ELECTRIC UTILITIES

The total reserves of the Commission and the municipal electric utilities for sinking fund, renewals, contingencies and insurance purposes amount to \$89,940,323.61, made up as follows:

Niagara system.....	\$35,940,823.40
Georgian Bay system.....	1,655,366.18
Eastern Ontario system.....	3,447,043.82
Ottawa system.....	24,734.17
Thunder Bay system.....	1,566,520.54
Bonnechere storage.....	16,450.97
Service buildings and equipment.....	542,754.55
Hydro-electric railways.....	133,298.05
Insurance, workmen's compensation and staff pension insurance.....	2,554,758.70
Total reserves of the commission.....	<u>\$45,881,750.38</u>
Total reserves of municipal electric utilities.....	<u>44,058,573.23</u>
Total Commission and municipal reserves.....	<u>\$89,940,323.61</u>

The consolidated balance sheet of the municipal electric utilities, on page 255, shows a total cash balance of \$858,733.68, and bonds and other investments of \$2,001,088.81. The total surplus in the municipal books now amounts to \$30,710,047.48, in addition to a depreciation reserve and sundry other reserves aggregating \$13,348,525.75.

* * *

The following is a brief summary of the principal operations relating to the several systems of the Commission:

NIAGARA SYSTEM

The Niagara system embraces all the territory lying between Niagara Falls, Hamilton, and Toronto on the east, and Windsor, Sarnia, and Goderich on the west, served with electrical energy generated at plants on the Niagara river, supplemented with purchased power transmitted from the Gatineau river.

There has been a steady increase in the number of consumers in this district and also in the load supplied by the Commission to the municipalities. Because of this rapidly increasing load it was necessary to arrange with the Gatineau

Power Company for power in excess of that which was to be delivered in 1929, as provided for in this Company's agreement with the Commission. Power supplied to the Commission by the Gatineau Power Company is received by the Commission at the inter-provincial boundary on the Ottawa river and is transmitted over a 220,000-volt, steel-tower transmission line to Leaside. The construction of the western half of a duplicate circuit, on separate steel towers, of this transmission line was completed during the year and put into operation to assist in carrying the heavy winter load.

A 110,000-volt, steel-tower transmission line from Niagara Falls to St. Thomas, which was planned during the previous year was completed and put into service to assist in taking care of the increasing demands in the western part of the area served by the Niagara system.

The installation of a tenth unit in the Queenston generating plant, which was arranged for in the previous year, is well under way and the unit will be available to assist in taking care of the winter load for 1930-31.

The Commission in this system has a total capital investment of \$168,004,159.13 and accumulated reserves for renewals, sinking fund and contingencies aggregate \$35,940,823.40. In the rural power districts of this system, which are operated directly by the Commission, the revenue for the year from customers was \$1,432,978.27, and the total cost of supplying the service was \$1,265,919.93, leaving a balance of \$167,058.34, which is placed to the credit of the districts in this system. The greater part of this surplus is returnable to the users in the form of reduced rates.

With respect to the electric utilities of the municipalities comprising this system, the actual cost of power during the year was \$1,069,149.68 less than the amounts of the interim bills. The municipal electric utilities operated with a net surplus of \$1,756,030.55, after providing \$1,250,559.13 for depreciation and \$1,511,788.75 for the retirement of instalment and sinking fund debentures. Seventeen municipalities had deficits during the year, aggregating \$15,328.77. The total revenue of the municipal electric utilities in this system was \$24,175,876.01, an increase of \$2,000,747.82.

GEORGIAN BAY SYSTEM

The Georgian Bay system serves that portion of the Province lying to the north of the area served by the Niagara system and west of the area served by the Eastern Ontario system. It comprises the territory adjacent to lake Huron and Georgian bay from Kincardine on the west to Uxbridge and Port Perry on the east, and north as far as Huntsville in the district of Muskoka.

Electrical energy is obtained from six hydro-electrical developments and from a frequency-changing station through which a block of power is obtained from the Niagara system. Surplus power is also obtained from a development owned by the town of Orillia. The combined capacity of these various sources of power all of which are tied together by a network of transmission lines approximates 25,000 horsepower. One of these developments, viz: that at Trethewey Falls on the south branch of the Muskoka river with a turbine capacity of 2,300 horsepower was completed and placed in operation during the year. Arrangements were also completed for constructing an additional frequency changing station at Hanover, power being obtained for this station over a 110,000-volt

transmission line between Kitchener and Hanover, part of which was erected during the year. It is expected that this station and line will be placed in operation during the summer of 1930, which will make available approximately 5,000 horsepower additional for the Georgian Bay system. Investigations and surveys concerning additional developments on the Musquash river at Ragged rapids were also carried on during the year in order to provide for additional plant capacity for the Georgian Bay system when required.

The results of the past year's operation were substantially better even than in 1928, which, up to that time, was the most successful year in the history of the system. The total capital invested by the Commission in this system is \$6,310,034.95, and the accumulated reserves, inclusive of renewals, sinking fund, and contingencies aggregate \$1,655,366.18. The revenue for the year from the rural power districts on this system which are directly operated by the Commission, amounted to \$74,225.78, whereas the total cost of service was \$69,567.94, thus leaving a balance of \$4,657.84 to be placed to the credit of the system.

The results obtained during the year from the operation of the electrical utilities in the various municipalities have been most satisfactory. The total cost of power during the year was \$77,630.81 less than the total amount collected at the interim rates. The total net surplus for the year from the various municipal electrical utilities amounted to \$104,025.71, after providing \$51,784.00 for depreciation, and \$53,389.04 for the retirement of installment and sinking fund debentures. Five small municipalities operated with an aggregate loss of \$2,424.78, whereas the total combined surplus of the other municipalities comprising this system was \$106,450.49, and the total revenue collected was \$1,044,636.48.

EASTERN ONTARIO SYSTEM*

This system, as at present constituted, combines the three systems hitherto known as the Central Ontario and Trent, the St. Lawrence and the Rideau systems. Except for the relatively small areas served by the Ottawa system, and the newly acquired Madawaska system, referred to later, the Eastern Ontario system serves the entire eastern part of the Province, that is, the territory lying to the east of the county of Ontario and the district of Muskoka, and bounded on the north, east and south by the Ottawa and the St. Lawrence rivers and lake Ontario.

The combining of these systems was necessitated in order to obtain an ample supply of additional power for the present and future needs of the eastern part of the Province. The Eastern Ontario system shares with the Ottawa system the mutual benefits to be derived by the purchase, from a common source, of power in bulk for future expansion. Under a contract with the Gatineau Power Company the Commission obtains a supply of 60-cycle power up to 100,000 horsepower from large developments on the Gatineau river. The various divisions of the Eastern Ontario system are now linked together by high-voltage transmission lines. The power is received by the Commission near Ottawa and from this city a 110,000-volt transmission line extends to the town of Smiths Falls of the Rideau district. From there one line branches off south to Brockville

*NOTE.—The formation of the Eastern Ontario system was not consummated until the earlier sections of this Report were in press. Consequently in Sections I to VI of this Report the former names of the eastern systems are used.

connecting with the St. Lawrence division at its westerly end; and another line branches off south-west to Kingston, connecting with the Central Ontario division at its easterly end. In addition to the benefits derived by the purchase of power in bulk from a common source, and those resulting from the physical interconnection of transmission systems, the consolidation of the accounting and operating activities will also effect economies to the partner municipalities.

The Commission in this system has a total capital investment of \$18,045,388.36 and accumulated reserves for renewals, sinking fund and contingencies aggregate \$3,447,043.82. In the rural power districts of this system, which are operated directly by the Commission, the revenue for the year from customers was \$150,323.11, and the total cost of supplying the service was \$136,078.22, leaving a balance of \$14,244.89, which is placed to the credit of the districts in this system. The greater part of this surplus is returnable to the users in the form of reduced rates.

With respect to the electric utilities of the municipalities comprising this system, the actual cost of power during the year was \$68,263.05 less than the amount of the interim bills. The municipal electric utilities operated with a net surplus of \$262,046.96 after providing \$72,774.21 for depreciation and \$79,272.11 for the retirement of installment and sinking fund debentures. Three municipalities had deficits during the year, aggregating \$1,612.16. The total revenue of the municipal electric utilities in this system was \$1,888,943.06.

MADAWASKA SYSTEM

The Madawaska system is the latest acquisition of the Commission to serve eastern Ontario. The properties comprising this system were formerly owned and controlled by Mr. M. J. O'Brien and were acquired by the Commission in June, 1929. The properties include the Galetta Electric Light Company, which serves the town of Arnprior and several adjacent villages and hamlets from a development on the Mississippi river at Galetta, capacity 1,400 horsepower; and the Calabogie Power Company with a plant at Calabogie on the Madawaska river, capacity 6,000 horsepower, which serves the municipality of Renfrew and is interconnected with the Galetta plant. In the town of Renfrew, several industries are supplied direct with power, and service is also given to some small rural communities in the vicinity of Renfrew and at Calabogie.

For the present the properties are being operated by the Commission in a similar manner to that followed by Mr. O'Brien. The undeveloped water power sites on the Madawaska river have an aggregate potential magnitude of 150,000 horsepower. The properties purchased included four of these sites, with a estimated capacity of about 85,000 horsepower.

OTTAWA SYSTEM

The Ottawa system serves the city of Ottawa, the village of Richmond, and the Nepean rural power district. Both the Nepean rural power district and Richmond obtain their supply of power through the distribution system of the city of Ottawa, Richmond obtaining its power over the network of lines supplying the Nepean rural power district.

For many years Ottawa has been receiving power through the Hydro-Electric Power Commission from the plant of the Ottawa and Hull Power Company. This company, now a subsidiary of the Gatineau Power Company, is under contract to supply the Commission with 20,000 horsepower. Hitherto this power has been developed in the company's plant on the Quebec side of the Ottawa river, opposite Ottawa. The power supply of 20,000 horsepower is now all in use and additional power is being obtained by virtue of the contract made with the Gatineau Power Company for bulk supplies for the general use of eastern Ontario. Under special arrangement, the Gatineau Power Company, throughout the year, has delivered any power required in excess of the 20,000 horsepower over the same lines as are used to supply this power. This arrangement provides for the additional needs of the system pending the completion of the 110,000-volt transformer station in the vicinity of the western part of the city of Ottawa, where additional power supply will be available from the Gatineau Power Company to meet future requirements.

THUNDER BAY SYSTEM

The Thunder Bay system serves the cities of Port Arthur and Fort William and the village of Nipigon situated in the district of Thunder Bay at the head of the Great lakes. Power is obtained from a hydro-electric development located at Cameron Falls on the Nipigon river, about seventy miles east of Port Arthur.

A second development on the Nipigon river, at camp Alexander, has been undertaken by the Commission to supply the growing demands for electrical energy in the Thunder Bay district. Alexander development, the capacity of which will be 54,000 horsepower, is situated a short distance below the Cameron Falls development and will probably be completed and placed in operation during the fall of 1930.

Power in this district, apart from that utilized for ordinary domestic, commercial and municipal purposes, is supplied chiefly to pulp and paper mills and terminal grain elevators at Port Arthur and Fort William. The demand for power last year on this system was greater than during any previous year, a peak of 77,000 horsepower having been established during the month of September. Had the grain trade been normal, and had plant capacity been available, the peak load, in all probability, might have reached the neighbourhood of 85,000 horsepower. The actual increase in this peak over that established the previous year was approximately 20,000 horsepower. The average power sold to Port Arthur during the year increased by 7,381 horsepower over the previous year. One of the large paper companies served increased its load by approximately 14,000 horsepower.

The Commission has, in the Thunder Bay system, a total investment of \$15,325,411.00, and accumulated reserves for renewals, contingencies, and sinking fund aggregating \$1,566,520.54. The total revenue of the municipal electrical utilities in the system was \$1,484,139.12, being \$127,545.33 greater than in 1928, and the total revenue collected by the Commission for power sold to the municipalities and private companies was \$1,454,080.66, or \$309,049.11 greater than for total collections from customers during 1928. The three municipalities served by this system operated with a net surplus of \$210,338.06 after providing depreciation to the extent of \$38,671.00 and \$22,901.53 for the retirement of debentures; all three showing substantial surpluses.

NIPISSING SYSTEM

This system serves the district adjacent to and inclusive of the city of North Bay, the town of Powassan, and the villages of Callander and Nipissing adjacent to the eastern end of lake Nipissing. Three hydro-electric developments now serve this system, all of which are situated at power sites on the South river; namely, at Nipissing, Bingham Chute, and Elliott Chute. The last named plant, with a turbine capacity of 1,800 horsepower, was completed and placed in operation during the year.

WAHNAPIŦAE DISTRICT

The service given by the Wahnapitae Power Company, the majority stock of which was acquired by the Commission during the year, has been continued with the same operating staff. Certain improvements have been made to the hydraulic structures; and service to Sudbury and other power customers has been continued as usual. Investigations have been carried on with a view to obtaining, either by development or purchase, a large block of power for use by mining properties adjacent to Sudbury.

PATRICIA DISTRICT

The hydro-electric development at Ear Falls at the foot of Lac Seul on the English river was completed during the year. This will supply power to mining developments in the Red Lake area. The Commission also co-operated with the Provincial authorities in the design of a conservation dam at Lac Seul, and of some marine railways to facilitate transportation between Lac Seul and Red Lake.

THE ANNUAL REPORT

The Table of Contents, pages xxi and xxii, conveys a good understanding of the scope of the matters dealt with in the Report, to which there is also a comprehensive Index. To those not conversant with the Commission's Reports the following notes will be useful.

In Section II, pages 5 to 51, dealing with the Operation of the Systems, are a number of interesting diagrams showing, graphically, the increase in the loads on the various systems. Tables are also presented showing the amounts of power taken by the various municipalities during the past three years.

The rural distribution work of the Commission has proved of widespread interest and special reference to this is made in Section III, on pages 61 to 75. The power distributed to rural districts is, and possibly must always be, but a relatively small proportion of the power distributed by the Commission. The supplying of electrical service in rural areas, and especially on the farm, has, however, been of great economic benefit to Ontario. The Provincial Government grants-in-aid to this work have been of value to agricultural activities, and have assisted the Commission to extend transmission lines to many areas.

In Sections IV, V and VI will be found information respecting progress of work on new power developments and on transmission system extensions, together with photographic illustrations.

About three-fifths of the Report is devoted to statistical, financial data which are presented in two Sections, IX and X.

Section IX presents in summary form the financial statements relating to the operations of the Commission chiefly in the generation, transformation and transmission of electrical energy to the co-operating municipalities. It is introduced by an important explanatory statement which appears on pages 125 to 129, to which special reference should be made.

Section X presents in summary form the financial statements relating to the operations of the municipalities in the localized distribution of electrical energy to consumers. It also contains details of the costs of electrical energy to consumers in the various municipalities and tabular statements of the rates in force which have produced these costs. An explanation of the various tables and statements is given at the commencement of this Section on pages 249-251; and a special introduction to Statement "D," which relates to the cost of electrical service in Ontario, together with a diagram, appears on pages 360 to 363.

In its Annual Reports the Commission aims to present a comprehensive statement respecting the activities of the whole undertaking under its administration. Explanatory statements descriptive of the operations of the Commission in various branches of its work are suitably placed throughout the Report in order that the citizens of the Province may be kept fully informed upon the working-out of the Commission's policies.

* * *

The various statements in this report bear testimony to another year of fine progress. During the year, a large block of electrical power was contracted for from the Beauharnois Power Corporation. The policy of the Commission is to ensure ample supplies of power to meet the growing needs of the co-operating municipalities.

In the development of this Province with its vast natural resources there seems to be but one sound policy, and that is to have available ample power supplies. If there is one obligation particularly resting upon a publicly-owned organization in hydro-electric development, it is to keep well ahead of the demand. That problem was quite serious a few years ago, and for a while threatened the Commission with some embarrassment. At that time the eastern part of the Province was quite exercised over the question of power supplies. That concern has since been removed, and the Commission has reason to believe that Ontario's Hydro municipalities are fully satisfied with the policy that has been pursued in order to take care of their electrical requirements.

The Commission has purchased power properties during the past twelve months on the Madawaska river, which enters the Ottawa river near Arnprior. Under full development, the Madawaska has a potentiality of about 150,000 horsepower. Similarly, a power property in the Sudbury district, known as the Wahnapiitae Power Company was acquired.

Beyond a few relatively small scattered properties, the only other sources of hydro-electric supply within the more closely settled portion of the Province, are in the waters of the Ottawa, St. Lawrence and Niagara rivers; all of which are either inter-provincial or international, and in their development call for co-operation by interests outside of this Province. Involved in the international waters there are in Canada federal and provincial issues, calling for settlement.

Moreover, there is a corresponding situation on the United States side of the St. Lawrence river where the federal government of the United States and the authorities of the State of New York do not seem yet to have reached agreement with regard to their respective claims.

During the past year, the Commission has been negotiating with Quebec interests for developments at both the Carillon and Chats power sites on the Ottawa river, and it is hoped that, at an early date, arrangements for proceeding with the work at the Chats site will be brought to a satisfactory conclusion.

The various reports herein presented clearly show that the Commission, in addition to taking care of its sinking fund requirements, is working into a strong position through the setting aside of very substantial reserves.

It is a pleasure to me again to acknowledge the splendid services always given by all employees. The Commission has a fine technical organization, and it is so regarded by those who come into contact with its staff.

To those entrusted by the various municipalities with the direction of their local "Hydro" utilities, I wish to express the sincere thanks of my colleagues and myself for their whole-hearted co-operation, and to the Press of the Province I also wish to say that we are very grateful for its service and support.

Respectfully submitted,

CHARLES A. MAGRATH,

Chairman.

TORONTO, ONTARIO, March 31st, 1930.

CHARLES A. MAGRATH, ESQ.,

Chairman, Hydro-Electric Power Commission of Ontario,

Toronto, Ontario.

SIR,—I have the honour to transmit herewith the Twenty-second Annual Report of the Hydro-Electric Power Commission of Ontario for the fiscal year ended October 31st, 1929.

I have the honour to be,

Sir,

Your obedient servant,

W. W. POPE,

Secretary.

TWENTY-SECOND ANNUAL REPORT

OF THE

Hydro-Electric Power Commission of Ontario

SECTION I

LEGAL

At the 1929 session of the Legislative Assembly of the Province of Ontario, four Acts relating to the work of The Hydro-Electric Power Commission of Ontario were passed. These are reproduced in full in Appendix I to this report. The short titles to the said Acts are as follows:

The Power Commission Act, 1929, Chapter 20.

The Power Commission Act, 1929 (No. 2), Chapter 21.

The Power Commission and Companies Transfer Act, 1929, Chapter 22.

The Hydro-Electric Railway Act, 1929, Chapter 55.

The agreements between The Hydro-Electric Power Commission of Ontario and the municipalities and corporations mentioned in the list hereunder given were approved by Order-in-Council dated the 14th day of May, 1929.

Waterford Sand & Gravel Company, Ltd.....	Sept. 30, 1927.

The Year's Activities

The Legal department of the Commission has had a very active year. Litigation extending over many years in which heavy damages were claimed in respect of the intake at Chippawa was finally disposed of by the judgment of the Privy Council. A large number of damage claims on behalf of and against the Commission have been dealt with during the year.

The Department has been actively engaged in the negotiation of a policy contract of insurance on behalf of the municipal commissions under which their employees will receive substantial pension and insurance benefits. The form of the policy contract has been finally settled and the scheme launched on a sound actuarial foundation. Many municipal commissions have already signed the necessary agreement with the Commission.

Right-of-Way

The continued extension of rural power lines during the year necessitated the securing of right-of-way and the approval of plans by many municipalities having control of township roads, as well as consents by commissions and other bodies, including the Department of Public Highways, having jurisdiction over provincial highways, county and suburban roads, etc. In addition it was found necessary in many cases to locate lines on private property where construction costs were found to be lessened by that procedure. In this connection it was also found necessary in many cases to secure tree-trimming rights and settlement of a few claims for damages. Work of the nature above outlined has been proceeded with in the following rural power districts: Beamsville, Beaumaris, Belleville, Brigden, Brockville, Chatham, Chesterville, Clinton, Cobourg, Drumbo, Exeter, Ingersoll, Kingston, London, Markham, Mitchell, Napanee, Nepean, Newcastle, Norwood, Oshawa, Peterborough, Port Perry, Prescott, Preston, Ridgetown, Sarnia, Scarborough, Simcoe, Smiths Falls, St. Marys, St. Thomas, Streetsville, Tara, Tilbury, Walsingham, Waterdown, Waterford, Welland, Williamsburg, Woodbridge, Woodstock, Wroxeter.

Low-Tension Lines

Tree-trimming rights, damage claims and settlements for pole rights and anchors have been secured on the following low-tension lines during the year:

Simcoe Junction to St. Williams.	Kilworthy Junction to Wasdells Falls.
Mount Vernon to Burford.	Chesterville to Finch.
Palermo to Milton.	Brockville to Athens.
Fletcher to Merlin.	Morrisburg to Winchester.
Gosfield Junction to Leamington.	Woodstock Transformer Station to Dufferin
Waubushene to Midland.	Construction Company, Innerkip.
Greenbank Distributing Station to Uxbridge	Brant to Brantford.
Junction.	Hamilton Transformer Station to Canada
Uxbridge Junction to Uxbridge.	Crushed Stone Corporation, Vinemount.
Uxbridge Junction to Port Perry.	Wiltshire Avenue to Weston.
Kent to Wallaceburg.	Thorold Transformer Station to Wabash
Newcastle to Orono.	Junction.
Newcombe Junction to Welcome Junction.	Winchester Junction to Prescott Distributing
Bowmanville to Oshawa.	Station.
Whitby Junction to Whitby Municipal	Kitchener to Hanover.
Station.	Muskoka Beach Junction to Muskoka Beach.
Kilsyth to Tara.	Dundas Transformer Station to Dundas
Tara to Southampton.	Municipal Station.

Substation Sites

Sites have been purchased for new substations as follows: Albion, Cataraqui, Forfar, Longbranch, Lyn, New Toronto, Niagara, Vinemount.

Flooding Rights

The purchase of lands to be flooded in connection with the proposed development at Chats falls on the Ottawa river has been commenced and a considerable number of agreements for purchases of this kind have been secured. Work of a similar kind has also been proceeded with in connection with development work at Elliott Chute on the South river and at Trethewey falls on the Muskoka river.

Gatineau High-Tension Line

The work of securing tower rights and telephone pole easements on the second Gatineau circuit has also been proceeded with. The construction of the second Gatineau circuit necessitated the settlement of a very large number of claims for damages to crops, fences, etc., as well as the payment for bush and trees in many cases. This work is rapidly nearing completion.

New High-Tension Lines

New high-tension lines have been laid out and practically completed during the year as follows:

1. **From the Ottawa-Smiths Falls line to connect with the Ottawa transformer station:** It was found necessary to purchase land covering this right-of-way. This work has been nearly completed.

2. **From a point on the Welland canal near Allanburg to St. Thomas—**Steel-tower construction: The securing of this right-of-way with the exception of a very small number of damage claims has been finished.

3. **From Niagara Falls to Welland and Welland to Port Colborne:** The securing of this right-of-way is now in hand, a considerable portion of it having already been secured.

Leases for offices for rural districts and electrical inspection work have also been secured in a large number of cases.

Licenses have also been obtained from the Dominion and Provincial Governments for the right to cross navigable waters.

A number of parcels of property no longer required by the Commission have been sold.

The work of relocating lines on provincial highways where road improvement work is being carried on by the Department of Highways has rendered it necessary to make arrangements with that department as to the costs of work of this kind. In all cases this work has been satisfactorily arranged.

SECTION II

OPERATION OF THE SYSTEMS

The year 1928-29 has been one of marked expansion and growth. The construction of the plants at Trethewey Falls and Elliott Chute added two more generating stations of the semi-automatic, remote-controlled type, to the generating stations already in operation. The purchase of the Bala Electric Light Company added two more generating stations in Bala, and the purchase of the Hanover plant made the fifth generating station added. The purchase of the Madawaska and the Galetta systems included two generating stations at Calabogie and Galetta, besides transmission lines and transformer stations at Renfrew and Arnprior. The purchase of a controlling interest in the Wahnapitae Power Company included three power houses, also transmission lines and a transformer station in the Sudbury district. This makes a total of ten generating stations added to the list of those already operated by the Commission.

Important extensions have been made to the main transmission lines. On the Niagara system, a new 110,000-volt line was put into operation from a point near Niagara Falls to St. Thomas, giving a second line of supply to that district, improving voltage regulation and service security on the western end of the system, and effecting a material saving in power through reduction of line losses. In connection with the supply of power from the Gatineau river, about 100 miles of 220,000-volt line was put into operation, from near Leaside to Cooper, this line being a part of the second circuit from Leaside station to the Ottawa river now under construction. The use of this section of line effects a saving in transmission losses. In eastern Ontario additions were made to the high-voltage transmission lines as follows: new lines were put into operation between the Ottawa river (connecting with the Gatineau Power Company supply) and Smiths Falls; between Smiths Falls and Kingston, connecting with the Central Ontario and Trent system; between Smiths Falls and Brockville, connecting with the St. Lawrence system; and a short line between Smiths Falls and the Rideau System lines. Through these lines the Central Ontario and Trent, the St. Lawrence, the Rideau and the Ottawa systems are all interconnected. By means of these interconnections spare power on any system may be transferred to another system, or in emergency power may be supplied to any system to make up for failure of the system's own supply. The interconnections also make possible the transfer of power from the Gatineau Power Company to all of the above systems.

While the four eastern systems are still operated as separate systems for administrative and accounting purposes, through their physical interconnection

Grand total, 1929.....	1,222,321	1,258,491*	4,992,937,029
Grand total, 1928.....	1,141,887	1,149,545*	4,341,498,634
Increase.....	+80,434	+108,946*	+651,438,395

*Peak totals given are direct sums of plant peaks as shown, without allowance for diversity in time. Therefore these totals do not indicate the demands on the various systems where there is more than one plant supplying power. Consult also table in Chairman's letter of transmittal.

†Reciprocal arrangement for surplus power.

they form an extensive operating network extending from Whitby on the west to Cornwall on the east, and from Lindsay to Ottawa on the north, covering a territory 25 to 45 miles wide and about 240 miles long. In area this network approaches that of the Niagara system, though not in population served or load carried.

Another outstanding feature of this year's operation was the large increase in load on most of the systems. The peak loads of all systems show an increase over last year (excluding export power in each case), amounting to sixteen per cent on the total for all systems. Taking figures for the total load in kilowatt-hours, the increase for all systems this year was 799,000,000 kilowatt-hours above the previous year, a twenty-three-per cent increase. This year's increase is decidedly greater than a normal year's growth, and is much greater than the growth during the previous year, which amounted to 310,000,000 kilowatt-hours, or ten per cent. The amount of power purchased this year shows a large increase, more than 415,000,000 kilowatt-hours, above last year, but the total power purchased from all sources during the year, 652,000,000 kilowatt-hours, is less than the year's increase in load. While a great part of the increase in load is due to large industrial consumers in the Niagara peninsula, yet there has been a general increase on all systems, except the Georgian Bay, indicating wide-spread business activity and prosperity. The decrease on the Georgian Bay system was largely due to special conditions arising out of the reduction in the western grain crop and the storage in western elevators of more than the usual amount of grain at the end of the season for navigation. This has reduced the load of the grain elevators in Georgian Bay ports, which forms a substantial part of the Georgian Bay system load. In so far as the reduction in load has been caused by greater storage in western elevators, this load may be considered as merely delayed and will appear in next year's load figures when the grain is brought down. The increase in the total load of the Central Ontario and Trent system was 6 per cent, which is slightly above normal, though not equal to last year's increase of ten per cent; the increase on the Ottawa system was nine per cent, which is about that of an average year; on the Nipissing system the increase was twelve per cent, which is distinctly above normal; the St. Lawrence and Rideau systems show a large gain, amounting to twenty per cent, and on the Thunder Bay system the increase reached the unusual figure of 46 per cent.

The growth of load on the Niagara system was sufficiently large to require an arrangement with the Gatineau Power Company whereby 50,000 horsepower, of the allotment due for delivery October 1, 1929, became available September 3, and a further 20,000 horsepower, of the amount due for delivery October 1, 1930, became available October 16, 1929.

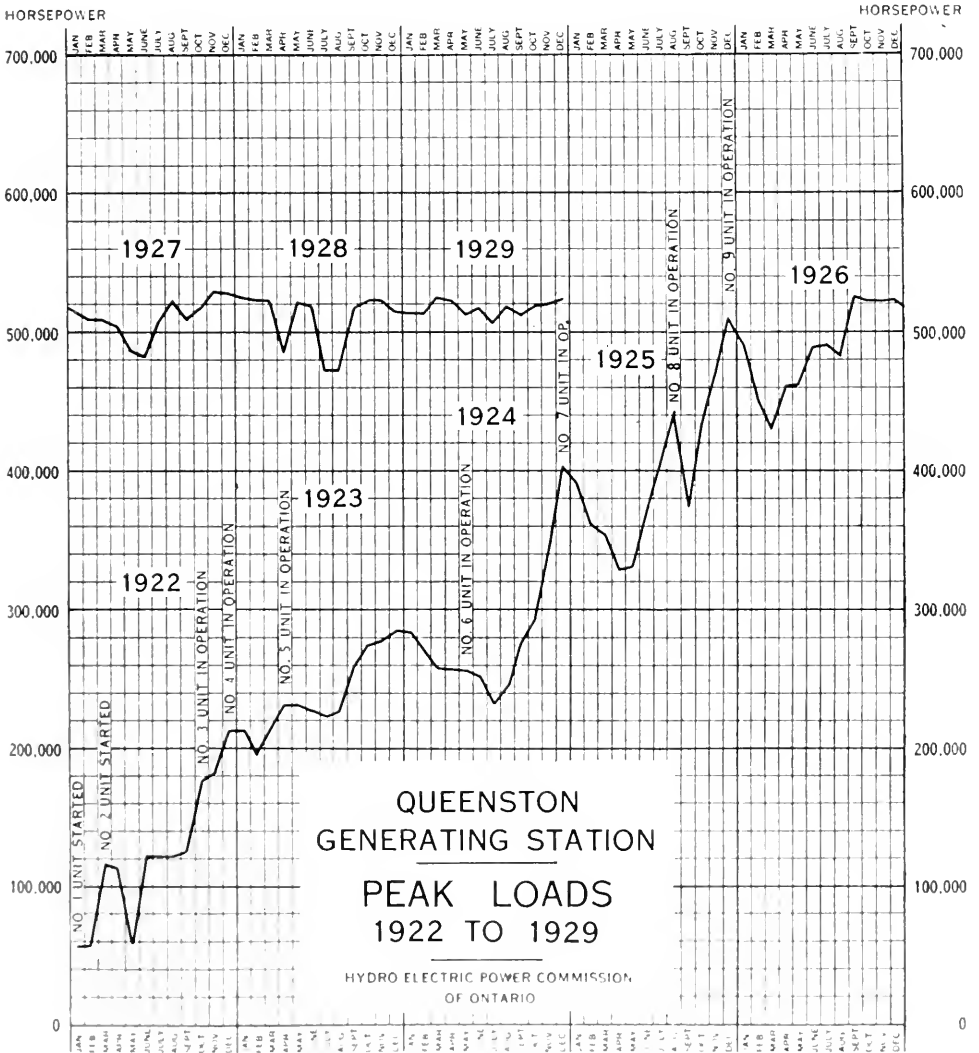

A dry summer season affected the water supply and generating capacity on all except the Niagara, St. Lawrence and Ottawa systems. The water supply was particularly deficient on the Georgian Bay system, where special arrangements had to be made for the purchase of power from outside sources. On the Central Ontario and Trent system, advantage was taken of the new line connecting through Smiths Falls with the Gatineau supply, relieving the situation, although it necessitated increasing the year's contract amount by 6,000 horsepower.

The output of the plants purchased during the year in the Madawaska, Galetta, Bala and Wahnapiatae districts is not included in the figures mentioned above, or in the tabulation of total power generated given herewith, complete figures not yet being available.

NIAGARA SYSTEM

Queenston Generating Station

There were no failures of electrical equipment at this plant during the year. From the first of November to the latter part of March, only the routine maintenance necessary to keep the plant in good operating condition was carried out,

as all equipment was required to carry the load. On April 20, after the usual seasonal decrease in load, No. 9 unit was removed from service and the armature completely rewound with new type coils. During this period the draft tube cone, the top portion of which had failed last year, was built up by mounting thereon a steel cap. Repairs to this unit were completed and it was returned to service on May 21, 1929. No. 8 unit was then removed, the armature rewound

in a similar way to No. 9, the top part of the concrete cone cut off and capped with metal, and the machine completely inspected, the unit being returned to service on June 8, 1929. On July 7, 1929, No. 4 unit was removed from service, the armature was rewound and an inspection made of all parts. The rewinding was finished and the machine returned to service on July 18. On July 19, No. 3 unit was completely dismantled, the generator was given a thorough overhauling and cleaning, and the turbine runner was replaced with the rebuilt welded runner removed from No. 4 unit last year, putting the machine in first-class condition. The unit was returned to service on August 12, 1929.

The usual annual inspection of all electrical equipment was carried out and repairs made where necessary. Turbine guide bearings were renewed, and some of the turbine runners, which showed signs of wear, were welded. Parts of the building and structures, both inside and outside, were painted during the year.

Ontario Power Plant

No serious troubles were experienced in the general operation of this plant during the year. On November 3, 1928, one armature coil of No. 2 generator broke down, necessitating the replacement of one group. The machine was repaired and returned to service on November 8. On December 23, 1928, the armature on No. 1 generator broke down in service, necessitating the removal of one group of armature coils, which was repaired and the unit returned to service on December 29. No. 2 generator was removed from service in May, 1929, for the installation of a new turbine runner and general overhauling. During this period the generator field coils were reinsulated, armature coils cleaned and complete windings thoroughly painted. This unit was returned to

service on June 22. On July 7, No. 15 unit was removed from service to install spare turbine runners, and both turbine and generator were generally overhauled. This unit was returned to service on August 28, 1929.

During April, 1929, No. 3 pipe line, of wood-stave construction, was given a very close external inspection and all bands and iron work given a coat of rust-resisting paint. The regular routine inspection and repair of all equipment was carried on during the year and all necessary repairs made, keeping the plant in good operating condition.

Toronto Power Plant

There were no failures in generating equipment at this plant during the year. Turbine No. 2 was given a complete overhauling and all worn parts repaired or renewed. The penstocks of units Nos. 4, 6, 8, 9, 10 and 11 were painted with a special rust-resisting paint. On April 14, 1929, the discharge tunnel was inspected and it was found that a part of the lining on the bottom had disintegrated and disappeared. The entire plant was shut down from June 28 until July 8, 1929, during which period complete repairs were made to the tunnel lining.

All electrical equipment was inspected regularly and repairs made where necessary. At the transformer station, No. 1 transformer of No. 2 bank, of 6,000-kv-a. capacity, which failed on September 15, 1928, was repaired and placed in service on January 29, 1929. There were four failures of 2,640-kv-a. units while in service, as follows: No. 1 transformer of No. 4 bank failed July 18, 1929, and was repaired and returned to service on October 19, 1929. No. 3 transformer of No. 3 bank failed on September 14, 1929; No. 1 transformer on No. 5 bank and No. 2 transformer of No. 3 bank failed on October 16, 1929. These latter three units are now being rebuilt.

Transmission, Transformation and Distribution

The operation of the transmission system was continued as three divisions, known as the yellow, green and brown, during the year. There were no interruptions on the brown and yellow divisions during the year and only one of approximately one-minute duration on the green division feeding to the east.

The 220,000-volt line from the Ottawa river to Toronto and the step-down transformer station at Leaside, gave extremely good service during the year. There were altogether ten interruptions to service. Four of these, covering a total period of one hour and ten minutes, were caused by lightning; three interruptions, totalling $26\frac{1}{2}$ minutes, were caused by failure of power supply at point of generation, and three interruptions amounting to a total of 10 hours and 45 minutes were due to trees or other foreign objects coming in contact with the line. There was no failure of line insulation during any of these troubles.

On April 1, 1929, a severe sleet and wind storm occurred over the entire system, resulting in line failures in the Essex, Kent, London and Dundas districts, and in a fire at the Woodstock station, damaging the low-tension switching equipment. On July 18, 1929, during a severe lightning storm, a 110,000-volt lightning arrester failed in Dundas station, followed by a serious fire. On December 13, 1928, a fire occurred on the low-tension switching structure of Guelph station, caused by a failure of local lines in the city of Guelph.

All station equipment, including both high-tension and distributing stations, received the usual routine inspection and overhauling in accordance with our standard schedule. On several high-tension stations the original 110,000-volt oil-breaker bushings were replaced with the gum-filled type.

Twenty transformer failures occurred during the year, of which three were returned to the manufacturers for repairs; fourteen were repaired by the Commission maintenance staff; one unit was scrapped, and two are now in course of being repaired.

The usual regular patrol inspection and maintenance work was carried out on the high-tension and distribution lines during the year, making all repairs necessary to lines damaged during storms.

Changes on the 110,000-volt lines were made at Niagara Falls, Allanburg, Hamilton and Burlington junctions in order to facilitate load changes and to improve operating conditions.

The distribution lines supplying Wallaceburg, Petrolia, St. Marys Cement, Waterloo and the Dominion Tire Company, were overhauled during the year. Insulators were tested on many low-tension lines and changed where found defective.

The telephone circuits following the Toronto Power right-of-way from Niagara Falls to Toronto were transposed and a phantom circuit installed. A telephone line, paralleling the 220,000-volt circuit from the Ottawa river to Leaside, was completed and put in operation on October 9, 1929, and gives extremely good service. Relays were installed on the telephone protective equipment at all stations between Dundas and St. Thomas and have improved operating conditions.

On the 220,000-volt system a new section of line from a point about half-a-mile east of Leaside to Cooper, a distance of 100 miles, was put into service. This is a part of the second circuit to the Ottawa river, the balance being still under construction.

On the 110,000-volt system, new lines from Allanburg junction to St. Thomas, and from Welland junction to Port Colborne were put in operation.

On the distribution lines the following were put in operation: 26,400-volt lines from Essex transformer station to Windsor; LaSalle junction to LaSalle; Gosfield junction to Leamington; and from Fletcher to Merlin; and 13,200-volt lines from Leaside to Scarborough; Toronto to Weston; Albion Park junction to Albion Park, and Hamilton to Vinemount. The line feeding Kingston Road division of Toronto and York Radial Railway was dismantled.

During the year a number of changes were made in the capacity of high-tension stations and distributing stations, as follows:—

Mount Joy distributing station	Three single-phase, 150-kv-a. transformers installed in place of one three-phase, 150-kv-a. transformer..	Nov. 22, 1928
Leamington distributing station	Three single-phase, 500-kv-a. transformers installed in place of three 250-kv-a. transformers	Jan. 26, 1929
Glendale distributing station	Three single-phase, 250-kv-a. transformers installed in place of three single-phase 150-kv-a. transformers.	Mar. 29, 1929
Walton distributing station	Three single-phase, 150-kv-a. transformers installed in place of one three-phase, 150-kv-a. transformer..	May 22, 1929
Elmira distributing station	Three single-phase, 500-kv-a. transformers installed in place of three single-phase, 250-kv-a. transformers.	June 23, 1929
Broughdale distributing station	Three single-phase, 250-kv-a. transformers installed in place of three single-phase 150-kv-a. transformers..	July 26, 1929
Stratford high-tension station	Three single-phase, 2,500-kv-a. transformers installed	Mar. 23, 1929
New Toronto distributing station	One three-phase, 3,000-kv-a. transformer installed and one three-phase, 1,500-kv-a. transformer removed	Feb. 17, 1929
New Toronto distributing station	One three-phase, 3,000-kv-a. and three single-phase, 1,500-kv-a. transformer installed	July 14, 1929
Etobicoke Township distributing station	Three single-phase, 500-kv-a. transformers installed in place of two three-phase, 300-kv-a. transformers.	July 13, 1929
Watford distributing station	Three single-phase, 100-kv-a. transformers installed in place of one three-phase, 150-kv-a. transformer..	April 11, 1929
Hamilton high-tension station	Three single-phase, 5,000-kv-a. transformers installed	Aug. 26, 1929

New transformer stations have been placed in service with transforming equipment, as follows:—

Ford distributing station	One three-phase, 3,000-kv-a. transformer	Dec. 4, 1928
Scarborough distributing station	Three single-phase, 1,000-kv-a. transformers	Feb. 15, 1929
Merlin distributing station	Three single-phase, 150-kv-a. transformers	Feb. 10, 1929
LaSalle distributing station	Three single-phase, 150-kv-a. transformers	Dec. 16, 1928
Albion Park distributing station	Two three-phase, 300-kv-a. transformers	Sept. 3, 1929
Vinemount distributing station	Three single-phase, 150-kv-a. transformers	May 17, 1929
Cyanamid transformer station	Six single-phase, 7,500-kv-a. transformers	Dec. 4, 1928
	Three single-phase, 7,500-kv-a. transformers	May 6, 1929

The following transformer stations were discontinued during the year:—

Fletcher distributing station	Now being fed from rural lines	Feb. 10, 1929
Port Colborne transformer station	Now being fed from Welland	Sept. 5, 1929
Blantyre distributing station	Now being fed from Toronto	Oct. 28, 1928

GEORGIAN BAY SYSTEM

The loads on this system have shown very little change from last year, the monthly peaks increasing about three per cent and the average loads decreasing by the same percentage. There has been a normal growth in load throughout most parts of the system but this has been offset as a result of the small quantity of grain handled in the elevators during the past year. The power required by the elevators at Midland, Port McNicoll and Owen Sound, during a normal year, forms a substantial part of the Georgian Bay system load.

There was sufficient river flow and storage-water supply throughout the system until August, but the lack of rainfall and excessive evaporation from this time until the end of the fiscal year caused the storage water to be depleted on all watersheds. To offset this condition, arrangements were made with the Owen Sound Public Utilities Commission for the operation of its steam plant, commencing about the middle of October, 1929, and with the Canadian Pacific Railway Company for the operation of its steam plant at Port McNicoll, commencing the last week in October.

During the year 1929 the Commission purchased the power plants, machinery, water rights and all lands and buildings in connection with the hydraulic power plants at Hanover and Maple Hill. In order to assist in the saving of storage water and to assist on peak load, the Hanover plant was renovated and placed in operation the latter part of September with a full load capacity of about 300 kilowatts.

The two hydraulic plants of the Bala Electric Light and Power Company were taken over by the Commission on April 27, 1929. The combined generating capacity of these two plants is 450 kv-a. The Bala plants and distribution networks are operated as a division of the Georgian Bay system but are not interconnected with the rest of the system.

NOTE:—The Georgian Bay system includes the Severn, Eugenia, Wasdells and Muskoka divisions. In the diagram the load for the Muskoka division is not included until November, 1924. Details respecting this load for preceding years are given in earlier Annual Reports. The load of the new division at Bala is not included in above graph, records being incomplete.

A 38,000-volt tie line was constructed between the Muskoka and Wasdells divisions to improve service to the Wasdells division. This line was ready for service in April, 1929. Power over this line is stepped down to 22,000 volts at the Wasdells auto-transformer station for the Wasdells division. A 1,500-kv-a. auto-transformer was installed at Wasdells power house for this purpose and was placed in service in May, 1929. Trethewey Falls plant, with an installed capacity of 2,000 kv-a., was placed in commercial operation September 29, 1929. This is a remote-controlled plant, situated on the south branch of the Muskoka river above the South Falls and Hanna Chute plants and is controlled from South Falls plant.

A substantial amount of power was purchased from the Orillia Water, Light and Power Commission during September and October, 1929, in order to make the most efficient use of the water flow in the Severn river.

A severe sleet storm on the system on April 1, 1929, caused damage to numerous sections of the lines. The greatest damage was done to the tie line between the Severn and Eugenia divisions, where, between Collingwood and Stayner, seventy-seven poles were broken. Collingwood, which is normally supplied from the Severn division, was supplied from the Eugenia division until

repairs to the lines were carried out. At this time there were also eighteen consecutive poles down on the Wasdells division as well as other odd poles at intervals on both the Severn and Wasdells divisions. Service was resumed with the least possible delay in view of the bad travelling and working conditions at this time of the year.

Severn Division

Peak loads on this division decreased four per cent from last year, while the average loads decreased fourteen per cent. This is accounted for, to some extent, by the reduced demands of the grain elevators.

A new circuit on a separate pole line was constructed from Waubaushene into the Midland district in the autumn of 1928, and was placed in service November 18. This makes the third circuit into the Midland district from Waubaushene, facilitating operation and maintenance, and affording better voltage regulation to this load centre.

Numerous changes to pole lines between Waverley, Elmvale and Barrie were necessary due to road alterations made by the Department of Provincial Highways. Extensive guying of poles was carried out on this division to strengthen the lines against severe storms such as were experienced during the winter and spring of this year, also the usual work of maintenance, insulator testing and replacement received attention. Four new air-break switches were erected on the lines at the south end of the Severn division, replacing switches of older design.

To improve operation at the Big Chute plant a number of changes were made. Braking equipment was installed on all four generating units. New hand-control equipment was installed on the No. 4 unit, and a central oil-pressure and pumping system for the operation of the governors on all units was installed. Extensive painting of the inside of the Big Chute plant and of the equipment was carried out during the year.

Owing to growth of load at Coldwater, the three 40-kv-a. transformers were removed from Coldwater distributing station and were replaced by three 100-kv-a. transformers which were removed from Orangeville distributing station last year.

A new boat house was erected at Waubaushene to replace the one destroyed by high water and storms during the spring period.

A 22,000-volt feeder out of the Collingwood station was placed in service to supply the new elevator substation at Collingwood erected during the year.

Eugenia Division

The peak and average loads on this division have shown an increase of thirteen per cent over last year.

Holland Centre distributing station, with a 10-kv-a., single-phase transformer, was placed in service December 20, 1928. This transformer steps the voltage down from 22,000 to 110 for local distribution.

A bank of three 250-kv-a. transformers was placed in service at Meaford April 28. This bank replaced a three-phase, 300-kv-a. transformer.

The three-phase, 300-kv-a. transformer, which was removed from Meaford, was taken to Holyrood and installed there May 12, replacing a bank of three 50-kv-a. transformers.

The Owen Sound steam plant was operated for part of November and the first week of December, 1928, to help carry the Eugenia division loads. This was made necessary by the failure of one of the transformers in the 25-cycle bank at Mount Forest frequency changer station on November 7, 1928. This transformer was repaired and returned to service December 2, 1928.

During a wind-and-sleet storm, which caused severe whipping of the lines feeding the Owen Sound district, trouble was experienced due to the breaking of insulator ties, heads pulling off insulators and insulators off pins. This trouble occurred in January during the bad travelling conditions. Trouble was also experienced on other lines of the division at this time, but not to such an extent as on the north lines to Owen Sound.

On April 1 the severe sleet storm, which caused excessive damage on the Severn and Wasdells divisions, was also experienced on the Eugenia division, but damage was not so great as on the other divisions. Repairs were made difficult owing to lack of communication, as the Commission's private telephone lines were down and other telephone and telegraph service was entirely disrupted.

A synchronous condenser was installed at Eugenia power house and placed in operation October 23. This unit was installed to improve the facilities for the transmission of peak and off-peak power from the Severn division to the Eugenia division, for conservation of water, and to improve system operation.

The small, 300-kv-a., hydro-electric plant (two 150-kv-a. units), at Hanover, purchased during the year, was overhauled and placed in operation to assist in carrying the division load, on account of the anticipated water shortage at the other plants supplying the system. To meet the increasing demands for power, combined with the poor water conditions existing on the various watersheds, arrangements were made for the operation of the Owen Sound steam plant, starting in October, 1929, and to be operated until relief is experienced by fall rains or spring freshets.

Wasdells Division

The peak load has shown very little increase over last year on this division but the average load has shown an increase of fifteen per cent. The addition during the year of the tie line from Muskoka and the auto-transformer station at Wasdells power house has been an important factor in assuring Wasdells division of continuity of power supply.

During the floods of the past spring, the tail-water was so high at Wasdells power house that for a period of ten days the head-water available was not sufficient to operate the plant. For a further period of two weeks the head was so low that very little power could be generated. During all this period the Wasdells division depended on the supply of power over the Orillia tie line, as the tie line to the Muskoka division was not completed at this time.

Reconstruction of the Commission's lines at various points was made necessary to provide clearance over the new Bell Telephone Company line from Oshawa to North Bay and Sault Ste. Marie.

A large amount of special maintenance work was carried out on the high-tension lines due to interference by road alterations, and extra line guys were installed to strengthen the lines where they are exposed to severe storm conditions.

Muskoka Division

The peak and average loads on this division are practically the same as last year.

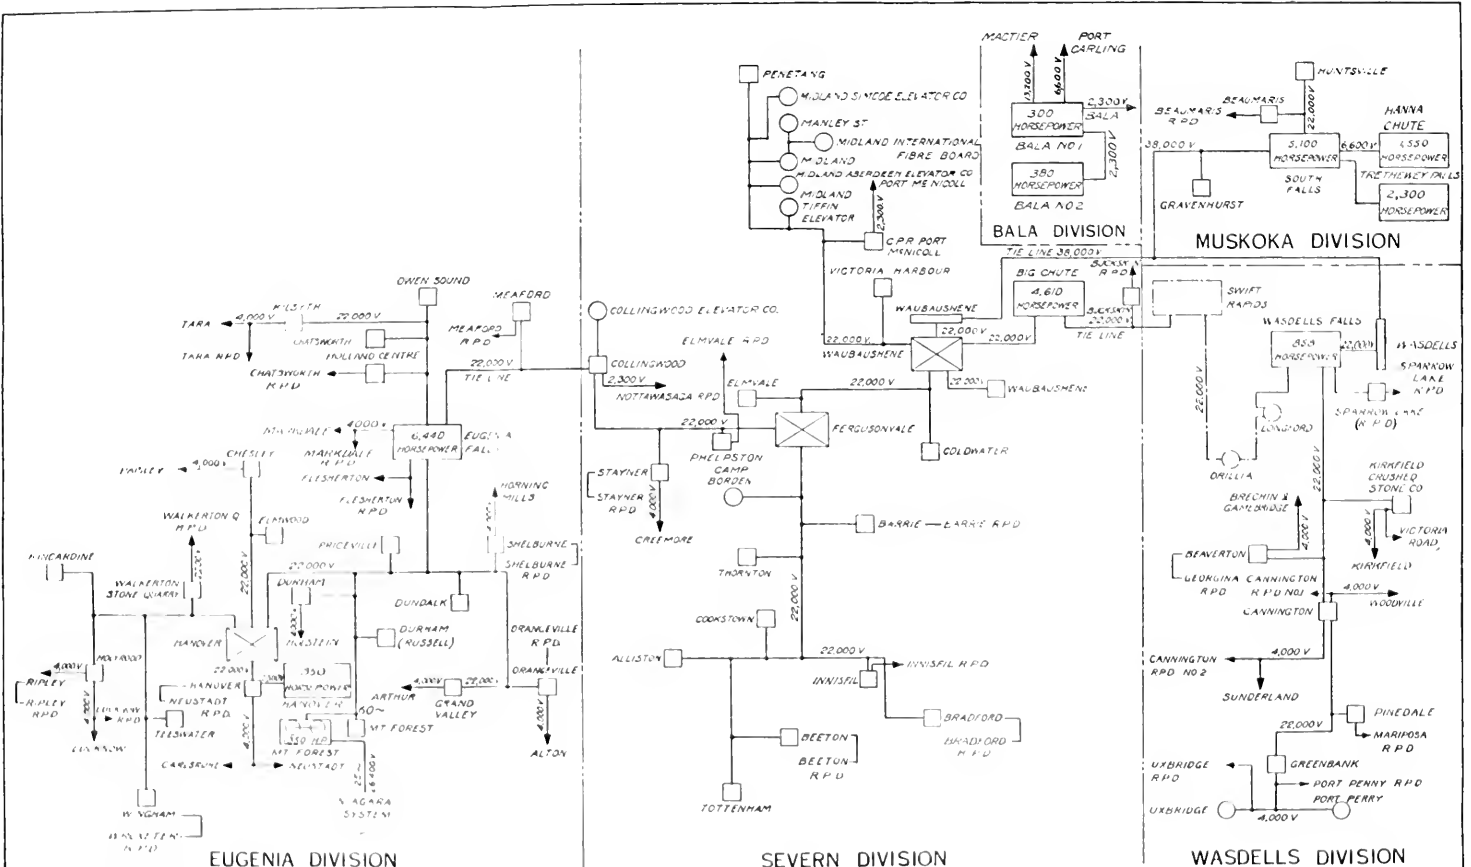

Extreme flood conditions existed on the Muskoka watershed in the spring of 1929. In spite of the fact that lake levels had been lowered in preparation for the freshet, the normal break-up, combined with continuous rains, produced extremely high levels in both Hollow lake and Lake of Bays. Later in the season the loss of storage water used to assist late spring and early summer log-driving operations, and the dry weather experienced from August to the end of October, combined to reduce lake levels and storage water to a point below anything before experienced at this time of the year.

A large number of stumps and dead trees, also refuse of other kinds, was removed from above Hollow Lake storage dam to assist in log-driving and control of storage water. Maintenance work at Hollow Lake dam was also carried out, the metal work being painted and the concrete deck waterproofed. Certain work was carried out at the Minden Bay storage dam to bind the earth fill—grass and shrubbery being planted on the surface.

An operator's cottage was constructed at Hanna Chute plant for the use of the operator stationed permanently at this plant. The Hanna Chute plant was shut down for inspection and repairs in July and it was found that the draft tube had broken away from the base ring of the turbine and was resting on the bottom of the draft-tube chamber. The necessary repairs were made by the Construction department, and entailed the building of a coffer dam to unwater the tailrace. At the same time piers were constructed in the tailrace with guides for stop logs to provide an easy method to unwater the draft-tube chamber. The turbine pit was waterproofed, the turbine adjusted where necessary, and other maintenance work performed.

Due to the fact that a water shortage was anticipated, the new plant at Trethewey falls, about two miles up the river from the Hanna Chute plant, was rushed to completion and put in operation on September 28, 1929, with head water slightly below the intended level. This plant has a 2,000-kv-a., 6,600-volt, three-phase unit installed and is operated by automatic equipment with remote control from the South Falls plant about two and one-quarter miles distant.

In order to arrange an adequate power supply for the Waddells division of the Georgian Bay system, where the demands had increased above the generating capacity at the Waddells plant, the 40,000-volt line between South falls and Waubaushene was tapped at a point several miles south of Gravenhurst station and a 40,000-volt line built to the Waddells power house. This 40,000-volt line was connected to the Waddells power house 22,000-volt bus through an outdoor auto-transformer station of 1,500-kv-a. capacity, erected adjacent to the plant.

Bala Division

The Bala system of the Bala Electric Light Company was taken over by the Commission in April, 1929, and its operation and service is being adjusted up to the Commission's standard.

It was noted that the machine at the No. 2 power house would not generate up to near its rated capacity. A complete examination was made and it was found that the curb ring or base ring was broken, allowing the lower portion of this ring and draft tube to become displaced. Temporary repairs were made by installing timber bracing and steel supports and by stopping air leaks as much as possible by sealing the upper end of the draft tube. These repairs were effective and the unit afterwards developed power up to nearly its rated capacity. More permanent repairs will be made when conditions permit.

In July the No. 2 unit at No. 1 plant was badly damaged by lightning. Arrangements were made to use the generator which was bought with the Maple Hill plant and had been cleaned up and painted. This generator was installed with its own exciter and after some alterations and adjustments went into service satisfactorily.

The walls of the forebay at No. 1 plant had deteriorated at the water line, and there was considerable leakage. In September after the season's heaviest loads were over, the No. 1 plant was shut down and repairs to this wall were carried out by the Construction department. The turbines at this plant were also examined and adjusted where necessary. They appeared to be in very fair condition for operation.

A small building was erected adjacent to the No. 1 plant to serve as field office for general division business in connection with the operation and maintenance of the plants and distribution system and service to customers.

The lack of satisfactory ventilation at the No. 2 plant was overcome by installing a large roof ventilator and placing panels with louvres in the doors.

The load on this division now taxes the generating capacities of the plants and provision for additional capacity is under consideration.

ST. LAWRENCE SYSTEM

Operating conditions generally on the St. Lawrence system have been satisfactory throughout the fiscal year. The load showed an increase of six per cent on the peak load for the year, and twenty per cent increase on the average load, which is gratifying. It will be noted from the graph that the loads throughout the entire year varied but slightly from the peak established in the month of November.

As mentioned in the last issue of this Report, the Cedars Rapids Transmission Company was supplying an additional amount of power to this system in excess of the contracted amount. However, during the month of November, 1928, the new 44,000-volt line was completed, extending from a point near Brockville to the high-tension transformer station at Smiths Falls, and power from the Gatineau Power Company became available to this system, thereby enabling the Commission to reduce the power taken from the Cedars Rapids Transmission Company to the contracted amount.

Five system interruptions of short duration were experienced during the months of June, July, August, September and October, owing to the failure of the power supply from the Cedars Rapids Transmission Company.

Telephone communication throughout the system has been greatly improved by the installation of standard telephone protective equipment.

A new 300-kv-a. transformer station was built at Lyn and placed in service in December, 1928, for the purpose of supplying power to the village of Athens and the surrounding territory.

At the Howard Smith Paper Company substation a second additional 750-kv-a. transformer was installed temporarily in March. The load at this station has continued to increase and the transformer is still in service.

At Cornwall transformer station the high-tension oil-breakers and electrolytic lightning-arresters were overhauled. The station site was considerably improved by levelling the land and planting evergreen shrubs.

The usual maintenance of stations and equipment work was carried out. Extensive maintenance work on lines was necessary, chiefly in replacing defective pin-type insulators. A number of poles were charred and treated with solignum to arrest the decay which usually takes place at the ground line.

RIDEAU SYSTEM

During the past fiscal year the demand for power on the Rideau system has shown a marked increase, both on peak and average loads, amounting to approximately 20 per cent. Water conditions during the year have been somewhat unfavourable for power development. This condition, together with the loss by fire of the Rideau Power Company generating station at Merrickville during the month of October, 1928, necessitated augmenting the system power supply. Accordingly, a temporary station was built at Smiths Falls immediately adjacent to the new high-tension transformer station and a 26,400-volt line extended from this station and tapped into the main line of the Rideau system about two miles from Smiths Falls, thereby making available to the Rideau system a supply of power from the Gatineau Power Company. The Rideau Power Company plant was rebuilt and power was again supplied by it to the system in June.

The Commission's generating station at Carleton Place was operated to advantage on several occasions during peak-load periods. At Kemptonville the 150-kv-a. transformer was replaced with a 300-kv-a. transformer to meet the increasing load demand. At Merrickville metering equipment was installed, replacing that which was destroyed by fire in October, 1928.

The usual routine work in connection with the maintenance of stations and equipment was carried out. A considerable amount of line maintenance

work was found necessary. About forty miles of poles were charred and treated with solignum. In many instances the decay was so far advanced that it was necessary to stub the poles. A number of the original 26,000-volt pin-type insulators were replaced.

THUNDER BAY SYSTEM

The load on the Thunder Bay system has shown a considerable increase for this year over the load carried during the preceding year, the increase in the average load amounting to over 46 per cent. Due to the extension of the ground-wood section and the placing in service of two large paper machines in the Great Lakes Paper Company mill at Fort William, the system load has been maintained at a very constant value from July onward. This load is approaching the maximum capacity obtainable from the generating plant at Cameron falls. The Nipigon Corporation pulp mill at Nipigon has not been operating during the year.

A slight change in the 110,000-volt lines occurred during the year when about half a mile of single-circuit steel-tower line leading to the new substation of the Great Lakes Paper Company was connected in service, thus permitting an equivalent section of wood-pole circuit to the original substation to be removed from service.

No new equipment was placed in operating service in the generating station or in any of the transformer stations.

The hydraulic maintenance work on No 4 unit mentioned in last year's Report was completed by the end of November, 1928. A new guide bearing was fitted to the turbine on No 2 unit, and other slight repairs were made while this unit was shut down for mechanical work on the generator during the early

part of 1929. The cast-iron runner of No 6 unit, which showed a relatively small amount of pitting or erosion, failed on September 30. The new cast-steel runner in stock was installed and the machine again placed in service during the evening of October 9. During the time this unit was out of service a certain amount of power was obtained from the Kaministiquia Power Company through interconnection at Fort William. The governor pumps and water-circulating pumps have been overhauled during the year and placed in good operating condition. The headgate cables of most of the units required replacement.

A certain amount of apparent slackness in the guide bearings of the generator on No. 2 unit indicated the desirability of dismantling this generator early in 1929. It was then found advisable to redesign the thrust collar support. The shaft of this generator was then removed from the rotor and returned to the factory where the shaft was straightened and a new type of thrust collar fitted. The unit has been operating very satisfactorily since it was returned to service April 23, 1929.

The 12,000-volt breakers at Cameron Falls generating station have been inspected and overhauled during the year. The failure of a bushing on one of the 110,000-volt oil breakers at Cameron falls caused one total interruption to all system customers. The only other total interruption was caused by the operator clearing the lines manually on account of a very severe system surge during a lightning storm.

The service obtained from the transmission lines during the year was again excellent. No interruption to any customer resulted from any trouble on the main lines from the generating station to Port Arthur, although Fort William and the Great Lakes Paper Company, which are supplied by single lines, each had one or more interruptions. A considerable number of side guys were added to the poles of the wood-pole line during the year and this line is now practically completely guyed. Treating of the poles at the ground line was again carried on during suitable weather this year, as this treatment gives promise of extending the life of the poles. Brush was cut along certain sections of the right-of-way.

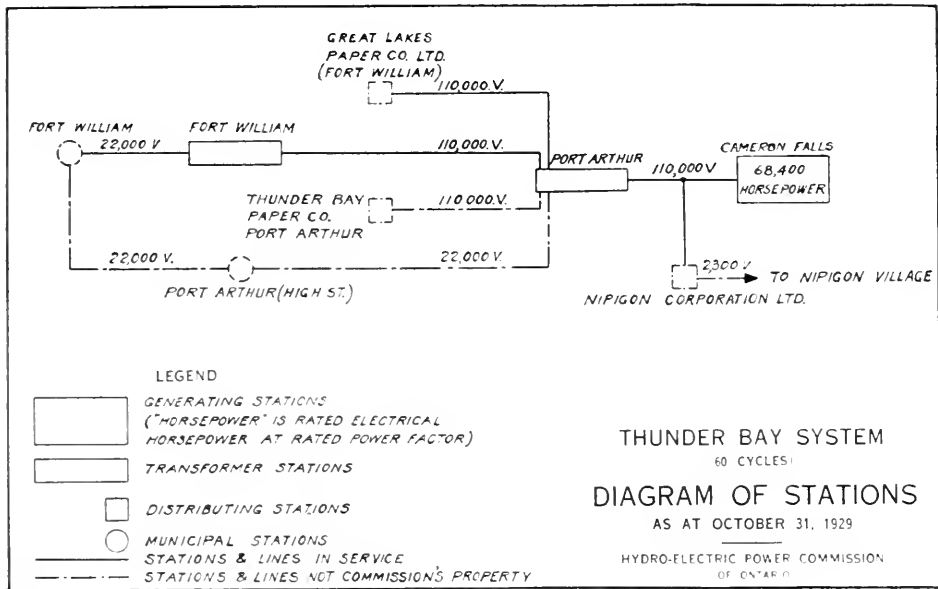

The Port Arthur transformer station has passed another year with no failures of major equipment. All oil breakers have been inspected and overhauled. Correct operation evidently has been obtained from all relays and associated breakers during the year.

The Fort William transformer station has also operated continuously with no failures of equipment. Slight mechanical trouble in one 22,000-volt breaker resulted in an interruption to this station, but careful readjustment and frequent inspection should prevent recurrence of such trouble. All the breaker equipment at this station has been inspected and overhauled.

The precipitation in the watershed supplying this system has been relatively light during the year, and there has been no water spilled (wasted) over the power house dam. The heavy load on the system has required a rather heavy flow in the river.

Radio Communication

The two short-wave experimental radio stations at Cameron falls and Toronto have been in service all year, with the exception of January and part of February due to lack of an operator at Cameron falls. Communication between the two stations was fairly reliable throughout the year except during the months of February and March, when atmospheric conditions were very bad. In no other month were there more than two days on which satisfactory communication was not secured. No special maintenance work was required on the equipment at either end during the year. The defective armature referred to in last year's Report has been repaired, of course, and replaced in operation with satisfactory results. Some slight changes have been made in the antenna system at Toronto, which have resulted in increased efficiency of transmission of signals.

THUNDER BAY SYSTEM—LOADS OF MUNICIPALITIES, 1927-1928-1929

Municipality	Peak load in horsepower			Change in load 1928-1929	
	Oct., 1927	Oct., 1928	Oct., 1929	Decrease	Increase
Fort William.....	8,635.0	10,556.3	9,966.5	589.8
Nipigon Township.....	48.2	56.2	57.6	1.4
Port Arthur.....	32,392.7	27,839.1	41,863.2	14,024.1

OTTAWA SYSTEM

From an operating point of view, conditions on the Ottawa system have been uniformly satisfactory throughout the year. The demand for power both in peak and average load has again shown a substantial increase and compares very favourably with the increase in previous years.

Owing to the increasing demand for power in November, 1928, the system capacity was augmented by a supply of power from the Gatineau Power Company. This power was supplied at 11,000 volts until such time as the new 110,000-volt station is completed.

In order to meet the requirements of the Nepean rural power district, the three 75-kv-a. transformers at the Carlington distributing station were replaced by three 200-kv-a. transformers.

OTTAWA SYSTEM—LOADS OF MUNICIPALITIES, 1927-1928-1929

Municipality	Peak load in horsepower			Change in load 1928-1929	
	Oct., 1927	Oct., 1928	Oct., 1929	Decrease	Increase
Ottawa	18,480	20,241	22,079	1,838

NOTE.—Nepean rural power district and Richmond included in Ottawa load to the extent of 295 horsepower for October, 1927, 282 horsepower for October, 1928, and 375.3 horsepower for October, 1929.

CENTRAL ONTARIO AND TRENT SYSTEM

During the past fiscal year, the demand for power on the Central Ontario and Trent system has again shown the usual annual increase. While the load was at all times within the limits of the installed generator capacity, trouble was on several occasions experienced due to very poor stream flow conditions which

restricted the normal output of several of the generating stations and necessitated the purchase of additional power.

The outstanding development of the year was the placing in service of the 44,000-volt connection to the high-tension transformer station at Smiths Falls on November 16, 1928, making available to this system power from the Gatineau Power Company. During the months of August and September the Gatineau power supply became decidedly more important, due to the very limited stream flow in the Trent river, and the original contracted amount of 6,000 horsepower had to be increased by increments of 2,000 horsepower until a demand of 12,000 horsepower was reached by September 12. Load reductions became necessary on several occasions in August and September during periods of most serious low-flow conditions. These, however, were of comparatively short duration.

The new telephone circuit from Belleville to Kingston was completed during the month of November. This, together with the newly-constructed telephone lines which are placed on the power line structures extending between Kingston, Smiths Falls and the Gatineau Power Company generating stations on the

Gatineau river, is of great value in load despatching and system operating. A decided improvement to our standard telephone protective equipment has been made by replacing the fuses with a low-energy type of relay which is automatically energized during periods of trouble and grounds both sides of the telephone line. Previously, considerable delay and inconvenience was experienced following power surges owing to the fuses blowing, resulting in some instances in extended delays in restoring power supply after an interruption to service.

The new high-tension line extending between Smiths Falls and Kingston, while it is now operating at 44,000 volts, was designed and constructed for ultimate operation at 110,000 volts. This line terminates in the new out-door switching station at Kingston, at which point the two systems may be synchronized.

At several of the transformer stations additional transformer capacity was added to meet the increasing power demand. The usual work connected with the maintenance of stations and buildings was carried out. At several of the plants turbines and governors were inspected and defective or damaged parts replaced.

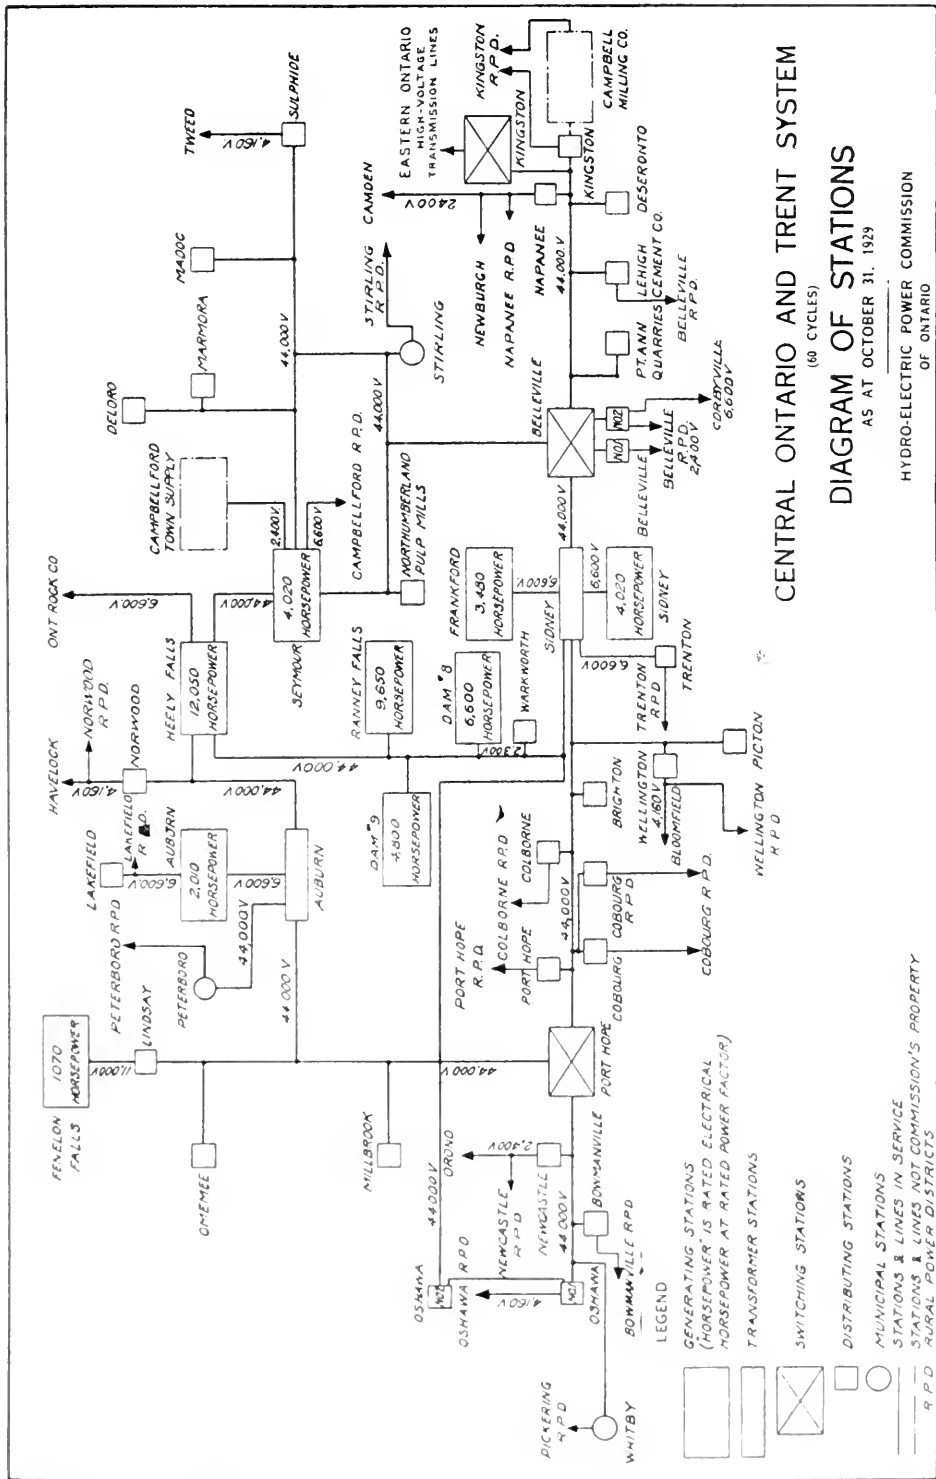

At Sidney, plant No. 2, no extensive maintenance work was necessary. A new ball-thrust bearing was installed on the turbine exciter unit, and the armature of this machine rewound. The floors of the power house and the transformer station were painted. The high-tension oil-breakers were all overhauled.

At Frankford, plant No. 5, the turbines and governors were all overhauled. A number of broken gates had to be replaced in each turbine. The head and tail-race gates were scraped and painted. Extensive repairs had to be made to the tail-race diversion wall which was dangerously undermined for a considerable length.

At Meyersburg, plant No. 8, all three turbines were unwatered and a quantity of driftwood removed from the turbine pits. All high-tension oil-breakers were overhauled and painted, two defective 44,000-volt oil-breaker bushings being replaced. The out-door transformers and all the steel structures were painted.

At Hague's Reach, plant No. 9, some trouble was experienced due to a large amount of driftwood accumulating in the forebay, and it was found necessary on three occasions to clean out the forebay and racks. All turbines were unwatered and a quantity of driftwood and debris removed from the wheel pits. The runner of one turbine was badly eroded, but satisfactory repairs were made by welding. The speed ring of the same unit had to be replaced. Special pressure-switches were installed on all governors for the purpose of keeping the motor-driven pumps in operation after the machines have been cut out, thereby maintaining a sufficiently high oil pressure for operating the brakes, which are automatically applied. All high-tension oil-breakers were overhauled and one defective high-tension bushing was replaced. The out-door oil-breakers, transformers and all steel structures were painted.

It will be recalled from previous issues of this Report that the above two plants are of the automatic supervisory remote-controlled type, and it may be of interest to state that these plants have operated very satisfactorily.

At Ranney Falls, plant No. 10, one turbine was unwatered on two occasions for the purpose of removing driftwood and debris from the wheel-pit. Seven broken gate-levers were replaced in the turbine. All high-tension and low-tension oil-breakers, the high-tension lightning-arresters, and the two voltage-regulators were overhauled.

At Seymour, plant No. 11, the forebay was unwatered and the racks cleaned. All governors were thoroughly overhauled, new connecting links, pins and screws being installed on the connections to the fly-balls, new spindles and steel bushings installed on the fly-balls, and the fly-ball heads balanced. A broken pedestal was replaced on one of the governors. All turbines were unwatered and thoroughly inspected. On one turbine it was necessary to rebabbit the lower guide-bearing and adjust the centre guide-bearing. All high-tension oil-breakers were overhauled. One of the generators was thoroughly cleaned and painted and a defective coil was replaced. The voltage-regulator was overhauled. Trouble was experienced with the three old 1,125-kv-a., three-phase transformers, and they were replaced with two 3,000-kv-a., three-phase transformers. A new oil-storage tank was installed in the basement of the power house.

At Heely Falls, plant No. 14, two of the turbines were unwatered and thoroughly inspected. The turbine glands and gate shafts of one unit were repacked. Two of the governors were overhauled and gate-limiting devices were added. The voltage-regulator and high- and low-tension oil-breakers were overhauled. One defective coil was replaced in each of two generators. Extensive repairs were made to the outside walls of the power house.

At Auburn, plant No. 18, the forebay was unwatered and the racks cleaned. Twelve new stop-logs were framed for use in the dam and a set of the old stop-logs reframed for use in the timber slide. All turbines were unwatered and inspection showed that a number of gates had to be replaced in each turbine. One turbine was thoroughly overhauled, all defective gate arms, links, pins and connecting rods being replaced. All the governors were overhauled. One generator failed during a severe electrical storm, two defective coils having to be replaced. A second generator failed during normal operating conditions and it was found that twenty-three defective coils had to be replaced.

At Auburn switching tower the high-tension oil-breakers were overhauled, one defective high-tension bushing being replaced. The out-door steel structure and oil-breakers were painted.

At the Oshawa condenser station a new 5,000-kv-a. synchronous condenser and voltage-regulator were installed.

At Oshawa transformer station one of the 3,000-kv-a. transformers failed in service and was returned to the manufacturer for repairs. This transformer, following repairs, was again placed in service on September 4. The control-panels for the two high-tension oil-breakers were moved from upstairs down into the control room. The high-tension oil-breakers were overhauled.

At Kingston transformer station one of the 750-kv-a. transformers was replaced on October 20 by a 1,500-kv-a. transformer to meet the increasing load demand. The dry-cell tripping-battery was replaced with a 24-volt storage-battery with trickle charger.

At Napanee transformer station one of the 300-kv-a. transformers was replaced with a 750-kv-a. transformer. Reactors were installed in the secondaries of the other two 300-kv-a. transformers to insure the proper distribution of load. A 24-volt storage-battery with trickle charger was installed. The high-tension lightning-arresters were overhauled.

PLATE A. PRECIPITATION DATA

The upper graph represents the estimated actual monthly precipitation on the Otonabee watershed expressed as a percentage of the normal precipitation.

The estimate is based upon the actual and normal returns of the Meteorological Service for Peterboro, Lindsay, Bancroft and Haliburton.

Although the numerical values differ from month to month the normal precipitation is taken as 100 per cent., hence the solidly hatched areas represent the amount by which the precipitation exceeded the average while the dotted hatched area represents in a similar manner the deficiencies.

The lower graph shows the actual and the normal precipitation in inches of rain.

PLATE BI—GENERAL OPERATING DATA
December 22, 1928, to June 21, 1929

GRAPH No. 1—System average weekly load in kilowatts.
 GRAPH No. 1a—Weekly average kilowatts supplied by plants on Trent river, including purchased power, but excluding power obtained from the Gatineau Power Co.
 GRAPH No. 2—Weekly average power equivalent of total flow at all dams. This equals the weekly average system load plus the power equivalent of the weekly average wastage of water at all plants from which the Commission derives its regular supply. The wastage is shown by the dotted hatched area between graphs 2 and 1.

Description continued on opposite page.)

PLATE B2 GENERAL OPERATING DATA
June 21, 1929, to December 29, 1929

GRAPH No. 3 - Average daily wastage at all plants expressed in kilowatts. In the weekly aggregate the area under this graph equals the wastage, represented by the hatched area between graphs 2 and 1 and shows the daily distribution on this weekly wastage.
 GRAPH No. 4 - Average daily power purchased in kilowatts.
 GRAPH No. 5 - Midnight elevation of Rice Lake.
 GRAPH No. 6 - Midnight elevation of Heely-Hastings reach.

At Belleville switching station one of the old rotor-type disconnecting switches was replaced by a new double-break disconnecting-switch. New control-cables were installed between the switchboard and the high-tension bus-structure. Synchronizing equipment was installed. Ammeters were installed on the Belleville tap. All the high-tension oil-breakers were thoroughly overhauled.

At Port Hope switching station the dry-cell battery was replaced by a storage-battery and trickle charger. On three of the high-tension lines directional residual-type relays were added. On the fourth high-tension line the induction-type overload relays were replaced by unidirectional relays. A third 44,000-volt potential transformer was installed. All high-tension oil-breakers were overhauled.

At Newcastle transformer station the 100-kv-a., single-phase transformer was replaced with a 300k-v-a., three-phase transformer. The station was changed over to three-phase, 44,000 volts on the high-tension side and 4,160 volts on the low-tension side. An additional feeder-panel complete with metering equipment was added.

At Picton transformer station, one of the 300-kv-a. transformers was replaced with a 750-kv-a. transformer. A reactor was installed in the secondaries of the remaining 300-kv-a. transformer.

At Port Hope transformer station the 300-kv-a. transformer was replaced by a 750-kv-a. transformer. The station was changed over from 2,400 volts delta to 4,160 volts star. Extensive repairs were made to the low-tension equipment following a burn-out behind the switchboard. The 44,000-volt series mechanical trip-relays were removed and a 24-volt trip-coil was installed and connected to operate from the transformer relays. The tripping potential on the transformer and feeder relays was changed from 110 volts alternating current to 24 volts direct current. The high-tension oil-breaker and the high-tension lightning-arresters were overhauled.

At Whitby municipal station a second 750-kv-a. transformer was installed.

At Cobourg an out-door, 300-kv-a. transformer station was built to supply power for the Cobourg rural power district.

At Norwood a second 300-kv-a. transformer was added to meet the increasing load demand.

A temporary 750-kv-a. transformer station was built near the Canada Cement Company plant at Lakefield to supply power to this company.

At Lehigh transformer station the high-tension oil-breakers and high-tension lightning-arresters were overhauled. Extensive repairs were made to the station roof.

At Marmora transformer station a second 50-kv-a. transformer was installed.

At Lindsay transformer station one of the 750-kv-a. transformers failed in service and had to be completely rewound. A second 750-kv-a. transformer failed in service and the defective coils on one leg were replaced. A new water-cooling coil was also installed in this transformer.

An extensive programme of line maintenance was carried out during the year. Preservation of pole butts was actively carried out, 4,300 poles being charred at the ground line and then treated with solignum. A considerable number of poles were stubbed on the different line sections. During the year 23,500 pin-type insulators were inspected, 1,200 found defective being replaced; 4,300 suspension-type insulators were inspected and 450 defective units were replaced.

Due to the very heavy rains in the spring and early summer, followed by high wind storms, a large amount of work was necessary to straighten leaning

poles at different points on the system. The usual amount of tree-trimming was done.

The Belleville machine and meter repair shop has again been very active throughout the year. General repair and production work has been carried out for local systems, private companies and the various sections of the Operating department. Assistance has been rendered throughout the year to various municipalities in connection with technical problems in the field.

Load and Water Conditions, Trent River Watershed

Following several years when water conditions were on the whole more favourable than usual, the latter part of the summer of 1929 shows a decided change, as will be observed from the precipitation graph, Plate A. During the winter months a comparatively heavy snow fall had accumulated, which remained without being reduced by thaws until late in March. Mild weather early in April, accompanied by rainfall in excess of twice normal, caused a heavy freshet flow in this month which practically equalled the record flows in the spring freshets of the years 1922 and 1928. Rainfall remained above normal until the month of June, when it fell to about 35 per cent of normal. Heavy rainfall in the early part of July raised the total for this month to above normal. These heavy rains, however, came at a time when the storage was about at a maximum and consequently ran off and were of no great benefit. During the latter part of the month of July and the months of August and September, precipitation was considerably below normal. This low precipitation, together with increased evaporation, created a condition decidedly unfavourable for power development.

Due to the above causes, the supply of power available from the generating stations on the Trent river became inadequate and it was necessary to purchase additional power from the Gatineau Power Company to meet the demand.

It might be added that during the month of December, 1928, trouble was experienced at several of the generating stations due to severe frazil and anchor ice. No serious load reductions were necessary on this account.

CENTRAL ONTARIO AND TRENT SYSTEM—LOADS OF MUNICIPALITIES, 1927-1928-1929

NIPISSING SYSTEM

Both the peak and average loads on this system show an increase over last year amounting to ten per cent. on the year's peak load and to twelve per cent on the average load.

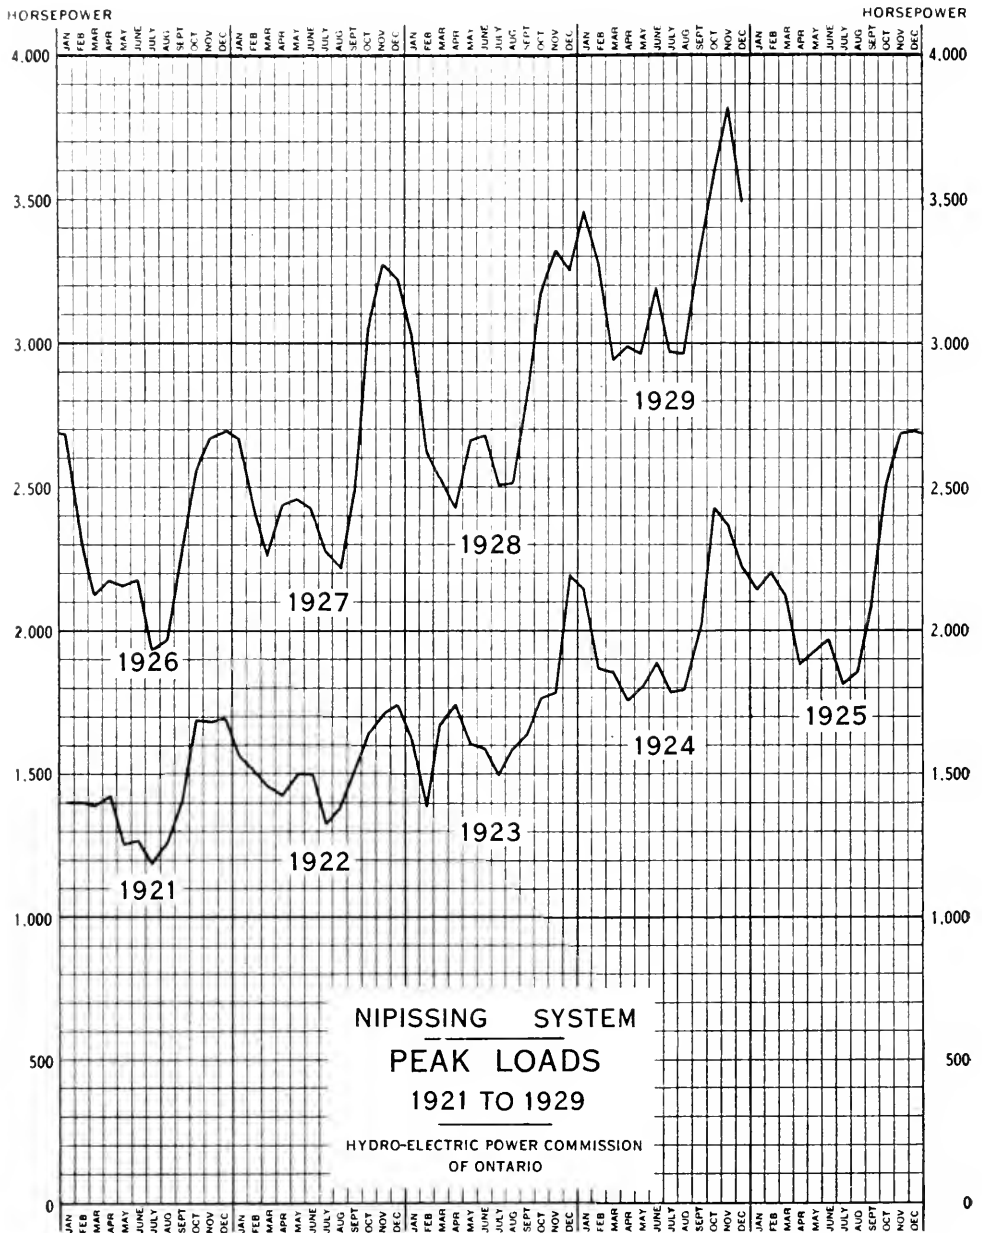

The new switching structure at North Bay was completed in November, 1928, giving North Bay the benefit of a double-circuit line from junction No. Z52 to No. Z4, North Bay substation. In December the 22,000-volt line connecting No. 1 station (Z4) with No. 2 station (Z9) in North Bay was made alive and the first transformer bank was tested out for service. In January the 750-kv-a. bank was removed from Z4 to Z9 and paralleled. The No. Z4 station at North Bay has now the original three 450-kv-a., single-phase transformers, and the No. Z9 station has two three-phase transformers of 750 kv-a. each. The No. 1 bank at No. Z9 station was formerly in service at Hanover station on the Georgian Bay system.

Floods were severe on the South river during the spring of 1929 but extra precautions had been taken at the generating stations so that water was prevented from entering the plants and doing damage to equipment, as happened in the previous year when excessive flooding also occurred on the river.

Owing to the dry summer season and the heavy loads, the storage water was largely depleted by the middle of September. Arrangements were made to have the new generating station at Elliott Chute in service as soon as possible. To conserve water and help carry the peak loads, the plant being put in operation on manual control October 7, 1929. This plant has an 1,800-kv-a. generator and

will be a semi-automatic, remote-controlled plant. When completed it will be controlled from Bingham Chute plant, which is situated about a mile further down-stream.

A large amount of work was carried out on the storage dams as part of a maintenance and renewal programme extending over a number of years.

MADAWASKA SYSTEM

The operation of the Madawaska system was taken over by the Commission on June 29, 1929. An inspection of the stations and lines has been made by the Commission's engineers and operating procedure is being gradually brought into accordance with the Commission's practice on other systems. Service has been satisfactorily maintained and no noteworthy changes have occurred.

EASTERN ONTARIO HIGH-VOLTAGE TRANSMISSION LINES

The outstanding development of the year affecting the Central Ontario and Trent, the St. Lawrence, the Rideau and the Ottawa systems, was the placing in service in eastern Ontario of a network of high-voltage lines and stations. These transmission lines serve as interconnecting links whereby 60-cycle power purchased from the Gatineau Power Company is transmitted to the Rideau, the Central Ontario and Trent, the St. Lawrence and the Ottawa systems, and whereby surplus and emergency power may be transferred from any one of these systems to another.

A line extending from the inter-provincial boundary near Ottawa to Smiths Falls supplies power to the new transformer station at 110,000 volts. Two lines are connected to the 44,000-volt bus at this station, one extending to Kingston and terminating in the new switching station for supplying power to the Central Ontario and Trent system, the other extending to a point near Brockville where it is tapped into the network of lines supplying power to the St. Lawrence system. The power supply for the Rideau system is taken from the 4,160-volt bus of the Smiths Falls transformer station and stepped up to 26,400 volts, by means of a temporary transformer station which was built on the same property. A 26,400-volt line was extended from this temporary station and tapped into the main Rideau system line about two miles from Smiths Falls. As a temporary expedient the power supplied to the Ottawa system is fed at 11,000 volts direct from the Gatineau Power Company until such time as the new 110,000-volt transformer station in Ottawa is completed.

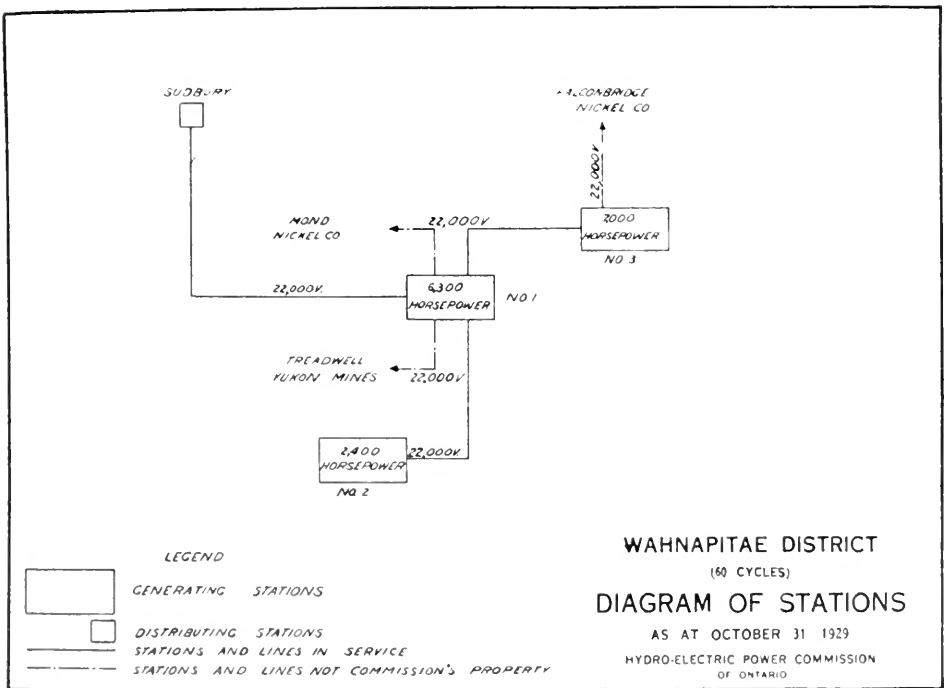

The new high-tension transformer station at Smiths Falls has a transformer capacity of 15,000 kv-a. The transformers have three windings, i.e., primary 110,000 volts, secondary 44,000 volts and tertiary 4,160 volts. Voltage regulation under load is accomplished by means of a specially designed regulating transformer which has a range of ten per cent buck or boost, with four steps in either direction.

The supply of Gatineau power over the high-voltage network in eastern Ontario has played a very important part in the successful operation of the above-mentioned four systems during the year. Following a very dry summer, water conditions became very unfavourable for power development on both the Central Ontario and Trent and the Rideau systems. The contract with the Gatineau Power Company provided for the definite delivery of 6,000 horsepower to October 1, with provisions for ordering additional power if required. Owing to the water conditions, additional power was ordered during the summer in blocks of 2,000 horsepower until the total contracted demand became 12,000 horsepower by September. The following are the peak-load demands of the

various systems on the Gattineau supply: Central Ontario and Trent system, 11,595 horsepower; St. Lawrence system, 4,290 horsepower; Ottawa system, 2,079 horsepower; Rideau system, 1,126 horsepower. These figures, of course, represent peaks occurring at different times, the combined total at any one time not exceeding the contract amount of 12,000 horsepower.

WAHNAPIITAE DISTRICT

While control of the Wahnapiitae Power Company was acquired by the Commission during the year, the company has continued as a joint stock company pending further arrangements, the same operating staff as formerly being retained. Service to Sudbury and other power customers in that locality has been continued but there has been nothing of special note to include in this year's annual report.

SECTION III

MUNICIPAL WORK

The Commission acts in an advisory capacity in connection with the operation of the "Hydro" utilities of the various municipalities with which it has contracts. In this connection the Commission arranges for the purchase, construction or extension of distribution systems and assists the municipal officials in making their financial arrangements to pay for the cost of these systems. All rate adjustments, as provided under The Power Commission Act, are recommended by the Commission, and a study of the operating conditions of all utilities is made annually and adjustments recommended accordingly. The Commission generally supervises the management and operation of all systems, more especially in the smaller municipalities, which, individually, are not of sufficient size to employ a manager with the technical knowledge necessary to administer properly all phases of the local system's operation.

In the case of the rural power districts, the Commission itself—on behalf of the corporations of the individual townships—operates the rural power systems, and distributes electrical energy to the customers of the respective corporations in any such rural power district.

NIAGARA SYSTEM

The power demands in the Niagara system showed a consistent growth during the year and the Commission has continued to add additional lines and capacity to take care of the ever-increasing loads of the municipalities. A tenth unit was purchased during the year for the Queenston plant. To take care of the rapid load growth in the western portion of the Niagara system, a 110,000-volt line was constructed from Niagara Falls to St. Thomas, following an almost direct route.

To take care of additional load from the Gatineau Power Company under the Commission's contract with it, an additional 112 miles of single-circuit 220,000-volt line was completed during the year from Toronto east. This is approximately one-half of the second circuit which will be completed during the coming year between Toronto and the Ottawa river.

The special contracts for interruptible power which the Commission has been able to arrange with various large power customers located close to Niagara Falls have been of substantial benefit to the system. By operating the Queenston-

Chippawa plant—the most efficient of the three plants owned by the Commission—at full capacity as much of the time as possible, the Commission is able to obtain from the available water supply a maximum amount of power. After taking care of the full requirements of the Niagara system operating at its greatest capacity, the Commission still has available a substantial block of power for sale under terms which permit its being interrupted during the maximum winter peak period, or whenever required, for use in Ontario.

The Commission has during the year sold substantial quantities of off-peak power to companies in the United States under arrangements which permit its withdrawal when required by Canadian industries.

General engineering assistance was given during the year to practically all of the municipalities in the Niagara system, by a general supervision of management and operation, and also in connection with the construction and extension of distribution systems and stations. Certain municipalities received special engineering advice and assistance regarding a number of matters, which are more fully referred to as follows:

Ayr—The local Commission, by resolution, requested on September 1st that the operation of its system be transferred to the Brant rural power district with respect to operation, maintenance, billing and collecting.

Beachville—The maintenance of the local distribution system was taken care of during the latter part of the year by the Commission at the request of the local Trustee Board.

Brantford Township—The local Commission, by resolution, requested on September 1 that the operation of its system be transferred to the Brant rural power district with respect to operation, maintenance, billing and collecting.

Burgessville—In accordance with a resolution of the Trustee Board, the operation and the maintenance of the distribution system were taken care of by the Commission, through the Norwich rural power district field staff.

Chatham—Underground cables were installed and the capacity of the municipal step-down station was increased to take care of the utility's present load conditions.

Courtright—The distribution system in Courtright was remodelled to supply an electrically operated pump in the waterworks plant. Also, the 4,000-volt line and the metering equipment which supplies power to Courtright were changed to three-phase.

Dashwood—At the request of the local Trustee Board, operation and maintenance were taken care of by the Commission's Exeter rural power district staff.

Dorchester—Plans and estimates were completed for a joint pole agreement with a local telephone company. The work in the field was carried out by the Commission's staff which operates the Dorchester rural power district. Under the new arrangement the appearance of the village is greatly improved, and better service is given to the consumers.

Drumbo—On September the first, at the request of the local Trustee Board, operation and maintenance were taken care of by the Commission's Brant rural power district staff.

Erieau—At the request of the village Council, the operation and maintenance of the local electrical distribution system were taken care of by the Commission, the work in the field being taken care of by their rural power district staff. Plans were completed to change to three-phase, the 4,000-volt line supplying the village, and to make additions and extensions to the village system to supply power to a large coal dock.

Essex County—A contract was made for a supply of 300 horsepower at 26,400 volts to a company supplying gas in this district. This power is to operate an artificial gas plant located a short distance southwest of the limits of the city of Windsor, and is to be used during the time of heavy demand on the natural gas supply, and to take care of any emergency which might arise. The Commission's engineers designed and superintended the construction of the company's substation.

Galt—A rearrangement of the 550-volt distribution system throughout the city was planned and advice was given regarding substation transformers to supply power at 550 volts for all industries.

Leamington—A supply of approximately 400 horsepower was given to a large factory in the town which formerly generated all its own power from steam.

Lucan—Plans and estimates were completed for the overhauling of the distribution system. The distribution line work was carried out by the Commission's staff which operates the London and Lucan rural power districts.

Merlin—At the request of the Police Trustee Board, the operation and maintenance of the village system were taken care of by the Commission, and operated by the rural power district field staff. The distribution system was changed from 4,000 to 8,000 volts to receive power from the new 26,400/8,000-volt distributing station constructed in Merlin.

New Toronto—To provide for the increasing loads, the greater portion of the primary distribution system was changed from 2,300 to 4,000 volts and additional primary feeders were erected.

Otterville—The operation and the maintenance of the electrical distribution system were taken care of by the Commission through the Norwich rural power district staff, in accordance with a request of the Trustee Board.

Petrolia—Tests were carried out by engineers of the Commission on the installation of a second electrically operated pump (750 imperial gallons per minute at 300-foot head, driven by a 100 horsepower, 550-volt motor) in the Petrolia waterworks plant.

Port Colborne—Plans were prepared for new cable crossings under the Welland ship canal.

Sandwich—Plans were made for the power supply to the Ambassador suspension bridge connecting the town of Sandwich with the city of Detroit. The downstream side of this bridge for its entire length will be lighted by electric energy from the Sandwich Hydro-Electric system, a series lighting system being installed.

Scarborough Township—A new station was erected for the purpose of supplying this township. Very extensive alterations and additions were made in the 4,000-volt distribution system on account of supplying the power from a different location and because of an increase in the general load.

Springfield—The maintenance of the distribution system during the year was taken care of by the Aylmer rural power district staff.

Stratford—Plans were prepared for the remodelling of the local substation for the purpose of installing larger equipment to take care of increasing loads.

Strathroy—The 4,000-volt distribution system was rebuilt in order to improve the local service.

Tavistock—Plans covering changes in the distribution system were forwarded to the municipality and the work was taken care of under the supervision of the Commission's engineers.

Thorndale—The operation and the maintenance of the local distribution system were taken care of by the Commission, at the request of the local Trustee Board.

Trafalgar Township—A distribution system owned jointly by the customers supplied was absorbed into Area No. 2, comprising the southwesterly section of the township. This system was partially rebuilt and considerable extensions were made to it.

Walkerville—Additional 4,000-volt feeders were installed to supply power to two large automotive companies, and to serve as a tie line between Walkerville's new substation in the southern part of the town.

Woodstock—A new 1,500-kv-a. step-down substation was constructed in the southwest section of the city. A study was made of the operating characteristics of the local system in order to determine the desirability of completing the 13,200-volt ring bus connecting the five municipal step-down stations by the installation of air-break switches, etc.

York North Township—New primary lines for feeding the westerly section of the township from a new station erected north of Weston have been constructed.

Zurich—The operation and the maintenance of the local system during the year were taken care of by the Commission, at the request of the local Trustee Board.

GEORGIAN BAY SYSTEM

The demand for power on this system has manifested a steady growth throughout the year, in consequence of which the output of the new 2,300 horsepower development at Trethewey Falls, which was completed and placed in operation during the year, has all been taken up. The Muskoka developments were tied in with the Wasdells development on the Severn river by a connecting transmission line, during the year, and the 22,000-volt transmission line was extended to Uxbridge and Port Perry to give improved service at the south end of the Wasdells district.

In order to provide for the present and future requirements of the Eugenia district—the demand for power in that area having grown beyond the capacity of the Eugenia development—the Commission has made arrangements for

constructing a 110,000-volt line from Kitchener (in the Niagara system) to Hanover and for the installation of a 5,000 kv-a. frequency-changer set at Hanover. It has also installed a synchronous condenser and auto-transformers at the Eugenia development to facilitate the transfer of larger blocks of power from the Severn and Muskoka developments to the Eugenia district. The Commission has also completed the purchase of two power sites on the Saugeen river at Maple Hill and Hanover.

Arrangements were made to proceed with the construction of a 12,000-horsepower development on the Musquash river at Ragged rapids and work was commenced on a tie transmission line between this development and Big Chute generating station.

The property of the Bala Electric Light Company serving the towns of Bala, Port Carling, and the adjacent area was purchased from the Burgess estate during the year. This gave the Commission complete control of all the power sites on the Musquash river. This system, together with the generating plants at Bala, will eventually be merged into and form a part of the Georgian Bay system. Arrangements were made for extending the transmission line on the north end of Eugenia development to the town of Southampton. This extension was placed under construction during the month of September.

The meeting of the Eugenia system municipalities (consisting of all the municipalities in the Eugenia division) was held this year at the Eugenia park, the delegates being guests of the Commission. The occasion afforded an excellent opportunity for the inspection of the Eugenia development by representatives from the towns receiving electrical energy from it.

General engineering assistance and advice concerning the management and operation of the various local distribution systems, the application of rates, and information to power and lighting consumers, was rendered to practically all municipalities.

Engineering advice of a special nature in connection with the matters referred to was given to the following municipalities:

Chesley—A complete survey was made of the Chesley distribution system with respect to changes necessary to provide for increasing demands for electrical energy, involving transformer changes and the installation of additional transformers and primary and secondary conductor. Arrangements were made for organizing a construction gang to complete this work.

Gravenhurst—A complete new ornamental street-lighting system was designed and constructed for the municipality. All poles and lines, including those of the Bell Telephone Company, were removed from the main street in the business area and the secondary mains were placed on the buildings on each side of the street by secondary rack construction.

Kincardine—A complete survey of the distribution system in this municipality was made by the Commission's engineers and recommendations were made with respect to transformer and primary and secondary line changes necessary to provide for improved service.

Lucknow—A complete survey was made of the distribution system in this municipality and recommendations were made covering changes in transformers and primary and secondary lines necessary to provide for improved service.

Orangeville—A complete new ornamental street-lighting system was designed for the business section on the main street of the town. Material was purchased and arrangements were completed for proceeding with construction work early next year.

Port Perry—Arrangements were completed for constructing a substation in this municipality to serve the distribution system from a new 22,000-volt transmission line, replacing the 4,000-volt service at present obtained from the Greenbank substation.

Southampton—Both enabling and money by-laws were passed by this municipality during the year covering the execution of a contract with the Commission for electrical service. An investigation was made covering the cost of constructing a new distribution system and assistance was given to the local officials in submitting information to the ratepayers concerning hydro-electric service.

Uxbridge—Arrangements were completed for constructing a new substation in this municipality to be served from a new 22,000-volt transmission line superseding the 4,000-volt service formerly obtained from the Greenbank substation.

Walkerton—A valuation was made of the private company's distribution system and an estimate prepared covering the cost of constructing a new distribution system in the municipality in connection with hydro-electric service. Information was given to the local officials in connection with these matters.

ST. LAWRENCE SYSTEM

During the year the demand for electrical energy for industrial power, in one municipality decreased owing to woodworking factories discontinuing operations, and in two other municipalities, factories manufacturing milk products, made changes in the process of manufacture whereby the uses of electrical energy were curtailed. There has been an increase in use, in all municipalities, for electrical energy for domestic purposes.

A system customer in Cornwall township made extensive additions and alterations to his plant, and when the contract for 5,000 horsepower expired in June a new contract was completed for a demand up to 10,000 horsepower.

Cardinal—The village of Cardinal completed negotiations during the year for a supply of power. This municipality will be supplied at 4,000 volts, three-phase, from a substation erected in the municipality.

RIDEAU SYSTEM

Growth of load in the municipalities served by the Rideau system has required an increase in station transformer capacity at Perth and Kemptville, and arrangements are being made to add additional transformer capacity at Carleton Place.

Power has been supplied from the High Falls plant, from the plant at Carleton Place, from the Gatineau Power Company through the transformer station at Smiths Falls, and also from the Rideau Power Company's plant at Merrickville which was rebuilt during the year, following a fire in 1928.

THUNDER BAY SYSTEM

During the year the loads in the various municipalities comprising this system equalled the generating capacity at the Cameron Falls generating station. The Cameron Falls development was placed in operation in December, 1920, with a demand approximating 7,000 horsepower and in less than nine years the full capacity of the development has been taken up, a demand of 77,000 horsepower having been established during the month of September. The construction of the new Alexander development on the Nipigon river was continued during the year and will probably be placed in operation at the end of the year 1930. When completed, it will have a capacity of 54,000 horsepower. Arrangements were made for constructing a third transmission circuit between Cameron Falls and the Bare Point substation at Port Arthur.

A large pulp and paper company in Fort William doubled its demand for power, having completed a large extension to its mill. It established a demand of 24,000 horsepower. The load sold in Port Arthur during the year was 7,382 horsepower greater than during the previous year and the total increase in load sold on the Thunder Bay system for the current year was 14,409 horsepower greater than last year.

Engineering assistance with respect to the operation and management of the local distribution systems and the application of rates was given during the year to the municipalities of Fort William, Port Arthur and Nipigon village, which comprise the municipalities served by the Thunder Bay system.

OTTAWA SYSTEM

The Ottawa system is supplied with power under a contract which was originally with the Ottawa and Hull Power Company, now incorporated in the Gatineau Power Company's system. This contract provides for supplying up to 20,000 h.p. at 11,000 volts. Arrangements were made with the Gatineau Power Company for additional power during the period of constructing a new transformer station. This new station will supply power to the Ottawa system from the 110,000-volt line, under a contract with the Gatineau Power Company. The Ottawa Hydro is erecting at the same point a low-tension switching station.

CENTRAL ONTARIO AND TRENT SYSTEM

During the year 1929 active steps were taken to place this system on the same basis as the other systems of the Commission. Negotiations were carried on with practically all the municipalities not owning their local distribution systems, with a view to the sale of the local systems to the respective municipalities. When this sale has been completed, it is proposed to have the title to the generating and transmission system vested in the Commission, in the same manner as in all the other systems.

The growth of load on this system has been satisfactory and the additional power required has been supplied over the connection through Kingston and Smiths Falls from the Gatineau Power Company. This supply of power has protected the system's customers from a serious shortage of power, due to low water on the Trent river and its tributaries.

Belleville—The local distribution system, formerly owned by the Government and operated by the Commission, has now been purchased by the municipality and will be operated by the Commission until the local Hydro-Electric Commission takes office, after the next municipal elections.

Bowmanville—A new feeder was installed in Bowmanville substation to take care of increased demand for power.

Cobourg—A number of water mains in the Cobourg waterworks system have been renewed where the corporation is paving the streets. The installation of two new filters has been authorized for the pumping plant.

Deseronto—Engineering assistance was given to the corporation in connection with its waterworks system and a new electrically driven pump was installed under the supervision of the Commission.

Hastings—A report is in preparation on the supply of power to Hastings for local distribution.

Kingston—The Public Utilities Commission has made extensions to the white-way street-lighting system on Princess street and in other sections of the city. Arrangements have been completed for installing a new feeder switchboard at the substation.

Lindsay—The Corporation of Lindsay completed the purchase of the local distribution system last year and has been very successful in the operation of it.

Napanee—A 750-kv.-a. transformer has been installed to replace a 300-kv.-a. in the Napanee substation, in order to provide for the growth of load in Napanee and the surrounding district.

Norwood—An additional 300-kv.-a. transformer has been installed in Norwood substation to provide for the growth in load in Norwood and Havelock.

Oshawa—The city of Oshawa completed negotiations during the year for the purchase of the local electric and gas utilities owned by the Government and operated by the Commission.

Peterborough—The city of Peterborough has purchased the local gas plant, formerly owned by the Ontario Government and operated by the Commission. It is proposed to install an additional 3,000-kv.-a transformer in the Peterborough municipal substation to provide for increased load.

Picton—To provide substation capacity to meet the growth in domestic appliances, the transformer equipment was increased from 600 kv.-a. to 1,050 kv.-a.

Port Hope—The voltage of the local distribution system was changed from 2,400 volts delta to 4,160 volts "Y" in order to improve the voltage regulation and to take care of increased load.

Trenton—The Trenton street-lighting system is being changed from a series system to a multiple system. The Trent Cotton Company has contracted for power and is being served at 6,600 volts.

Whitby—The municipality of Whitby is installing a second 750-kv-a. transformer in its substation to take care of the increase in load at Whitby and in the Pickering rural power district.

NIPISSING SYSTEM

Due to the growth of load and the increasing demand for power, especially in the city of North Bay, a new development at Elliott Chute on the South river was constructed and placed in operation during the year, increasing the generating plant capacity of the system by 1,800 horsepower.

MADAWASKA SYSTEM

During the year, the Commission purchased the electrical properties supplying the towns of Arnprior and Renfrew and the surrounding district, formerly owned and controlled by Mr. M. J. O'Brien. These properties consist of:

1. The Galetta Electric Light Company, the stock of which was purchased by the Commission. This Company serves the town of Arnprior and numerous villages and hamlets in this vicinity, from a development on the Mississippi river at Galetta.

2. The Calabogie Power Company on the Madawaska river, together with interconnecting transmission lines to the Galetta Company's property and to Renfrew. These properties were acquired from Mr. M. J. O'Brien and the purchase included a number of important power sites on the Madawaska river which will be available for future power requirements of the Commission.

NEW ONTARIO DISTRICT

Engineering advice and information concerning electrical service was given to various municipalities in the northern part of the Province, especially to the city of Sault Ste. Marie and the towns of Chelmsford, Rainy River, Capreol, and Sioux Lookout. The construction of a development was undertaken at Ear Falls on the English river for the purpose of supplying power to mining, paper and other companies, and 2,000 horsepower has already been contracted for. This development will also be used in future for serving the town of Sioux Lookout, and possibly for the pulp and paper industry. A survey was made of the present and future mining loads in the vicinity of Sudbury and adjacent to the territory known as the Sudbury basin, and an investigation was carried on covering future developments on the French, Ottawa, Mississagi and other rivers as well as the possibility of bringing power into the district from developments on the Hudson Bay watershed. The Commission purchased the majority stock of the Wahnapiatae Power Company and is now operating its developments and transmission lines which serve the town of Sudbury and several mining corporations in the district.

RURAL ELECTRICAL SERVICE IN ONTARIO
A farm home in Ontario using "Hydro" service

RURAL ELECTRICAL SERVICE

The history of the application of mechanical power to agriculture is largely a record of individual effort. In Ontario, windmills have chiefly been used for pumping water and, since pioneer days, small waterpowers have been harnessed and used for sawing wood, grinding grain and similar processes. More recently, gasoline and oil engines have in some cases been utilized both for the operation of equipment on the individual farm and for the operation of the larger portable equipment which serves the rural community generally. The application of mechanical power to farming operations is therefore no novelty in Ontario and there is a growing appreciation of its importance as a contributing factor to successful farming.

Farm electrical service as given by the "Hydro", however, is much more than an aid to certain operations about the farm. It is a service that, in addition, adds the conveniences of the city dwelling to the attractiveness of the farm home, and more than any other agency can contribute to the maintenance of a satisfactory standard of living which will attract and hold the younger generation. The rural population has therefore welcomed with enthusiasm the possibility of obtaining the combination of lighting service with that of a most flexible form of power. The great networks of transmission lines which serve urban municipalities have constituted an opportunity and afforded a base from which rural primary lines may economically be extended over wide areas of the more closely settled parts of rural Ontario. The growth in mileage of rural lines during recent years has been phenomenal, and the farmers of Ontario are taking advantage of the service as fast as lines can be built to supply them.

The policy and practice of the Commission has been, and is, to make a distribution of electrical energy as widespread as possible, and to extend to every community that can economically be reached by transmission lines the benefit of electrical service. In harmony with this policy, the supplying of electrical service to rural districts has been undertaken according to a comprehensive and carefully thought-out programme. For the purpose of electrical service in rural Ontario, rural power districts are formed in the most closely settled portions of the Province traversed by transmission lines. A typical rural power district

RURAL ELECTRICAL
A farm home near Waterloo,

covers about 100 square miles. Its boundaries are not arbitrary geographical limits—such as define, for example, the areas of townships—but depend rather upon the economic distances which may be served from a distribution centre of city, town or village. It should be appreciated that without such transmission networks as have been constructed to serve the cities and towns of the Province, any extensive rural electrification would be economically impracticable.

The experience gained by the Commission and the improvements in technique, enable electrical service to be given to rural districts when there can be secured three signed farm contracts, or their equivalent, per mile of line to be constructed.

The assistance given by the Province to farmers and rural residents in the form of a grant toward the capital cost of supplying electrical service is being made to the maximum amount provided for by the Rural Hydro-Electric Distribution Act, namely, 50 per cent of the cost of lines and secondary equipment.

This assistance is in pursuance of a long-established governmental policy of promoting the basic industry of agriculture in various ways. This policy had previously found expression in the establishment of agricultural schools, colleges and experimental farms, in assistance for road building and in other ways. The grants-in-aid thus given make it possible to extend hydro-electrical power service to those engaged in and connected with agricultural pursuits in less densely populated districts where otherwise such service would not be financially feasible.

The extent and effect of the Province's financial assistance with respect to the distribution of power in rural districts should be clearly understood. The Government grant-in-aid relates to the initial capital investment. Having made

SERVICE IN ONTARIO
Ontario, using "Hydro" service

its grant-in-aid, the Government's participation in operations respecting the property to which the grant applies ceases. Each rural power district not only pays its cost of operation, maintenance and administration of these lines, but also sets up reserves for renewals, obsolescence and contingencies on the whole of the equipment and lines, as well as for sinking fund on the investment made by the Commission on behalf of the local authorities. The provincial grant-in-aid is of special assistance when the initial financial investment for any rural power district is made.

The aggregate load distributed to the rural dwellers is, and possibly must always be, but a relatively small porportion of the total energy distributed by the Commission, and the provincial grant towards the cost of rural service is of no advantage to the power system as a whole, because the demand for power at present, apart altogether from the small amount distributed to the rural districts, is such as readily to absorb all the available supply. On the other hand, the beneficial influence of rural electrical service on agriculture is reflected in the prosperity and welfare of the Province as a whole, and is already a factor of importance and worth.

The accompanying diagrams illustrate the unprecedented expansion of rural primary-line extensions during the last nine years, and the increase in the use of electricity by the farming communities of Ontario as shown by the aggregate peak loads. It is believed that further substantial progress will be made in the next few years. An outstanding reason for this growth is the extent to which the Commission has gained the confidence of the rural communities through efficiency in the construction of lines, through progressive reductions in rates and by a continuity of service which has contributed very materially to progress by inspiring confidence in the use of electrical power-driven machinery.

RURAL ELECTRICAL SERVICE IN ONTARIO

Three-horsepower motor in barn driving chopper, saw bench and line shaft

The Year's Activities

During the past year the amount of constructional work carried out in the rural power districts exceeded by a substantial margin that of any previous year. Some 1,044 miles of primary transmission lines were constructed and electrical service was given to 6,277 additional consumers. The capital expenditure approved for rural construction work during the past year was \$2,668,241, and the aggregate peak load in October, 1929, reached 21,138 horsepower. Details of these matters and of the present status of rural distribution are presented in the accompanying tables. For the coming year, arrangements have been made to construct about 1,500 miles of additional rural lines.

The engineers of the Commission attended during the past year a number of public meetings throughout the Province, held for the specific purpose of explaining to prospective consumers the rates at which electrical power could be supplied, the uses which can be made of power on the farm and the procedure necessary to obtain service. In all, eighty-eight meetings were held. Where possible, moving pictures were shown, illustrating the uses of electricity on the farm. The provincial statutes relating to rural distribution were explained, pamphlets were distributed, and assistance was given to local committees appointed to canvass their respective districts.

The Commission also co-operated with the Provincial Department of Agriculture by giving similar talks to students taking short-course lectures at the Agricultural College at Guelph, and at other centres. Representatives of the Commission also attended provincial ploughing matches and arranged to give

RURAL ELECTRICAL SERVICE IN ONTARIO

An electrically-equipped kitchen in a farmer's home in Markham rural power district. The electric range, washing machine, refrigerator, iron and toaster, with a modern sink and laundry tubs supplied by a water system installed in the basement, assist materially in relieving the arduous duties of the farmer's wife.

RURAL ELECTRICAL SERVICE IN ONTARIO

Water service for the farm, home and stables is always a problem. This illustration shows a single-pumping unit with two storage tanks and valve arrangements to take care of the supply of hard and soft water, the former for both house and barn, the latter for the house only. Three-way valve is on the intake and output sides of the pump provided for switching from one supply and storage to the other. This installation is in the basement of the house.

SUMMARY OF RURAL LINE EXTENSIONS

As Approved by the Commission from June 1, 1921, to October 31, 1929

System	Miles of primary line	Number of consumers			Capital approved for extension	
		Hamlet	Farm	Total	Total	Provincial grant
Niagara.....	4,340.58	16,165	14,041	30,206	\$ 9,614,248.94	\$ 4,807,124.47
Georgian Bay.....	275.30	1,475	596	2,071	580,484.36	269,175.70
St. Lawrence.....	159.53	780	298	1,078	342,879.45	171,439.72
Rideau.....	43.30	172	55	227	81,854.00	40,927.00
Ottawa.....	83.82	312	284	596	187,703.53	93,851.76
Central Ontario and Trent.....	353.71	2,141	860	3,001	817,357.50	408,678.75
Nipissing.....	5.00	152	9	161	17,268.00	8,634.00
Total.....	5,261.24	21,197	16,143	37,340	11,641,795.78	5,799,831.40

information to a large number of interested farmers. The manufacturers of electric motors and other equipment used in connection with power on the farm co-operated with the Commission in giving demonstrations at various places, showing actually how power can advantageously be employed by the farmer.

During the past year not only has the power taken by the rural power districts increased because of increased mileage of transmission lines and the demand of the consumer connected to these new lines, but the demand for power has also increased due to the greater use of electricity on the farms already served and due also to the connection of new consumers to existing lines. Furthermore, many townships have installed—in districts where the conditions warranted—street lighting systems on the public highways. To supply these increased loads, new substations have been constructed and the capacities and number of lines have been increased.

One of the most important factors in connection with rural power supply is the stability of the rates charged. Experience has led the Commission to adopt the safe policy of constructing rural lines only when sufficient contracts have been signed to guarantee payment of the fixed charges on the cost of the lines to be constructed; the minimum signed contracts required being three rural, light or medium, farm contracts, or their equivalent, per mile of line constructed.

The rates first submitted to the proposed consumers are, therefore, the maximum, and the rates in any rural power district may be and in practice have been reduced from time to time as the number of consumers per mile of line constructed in the district increases above the required minimum. Sixty per cent of all operating rural power districts have had their rates reduced as shown in the accompanying table, and it will be noted that service charges have been reduced to as low as 50 per cent of the maximum.

The service given by the Commission is "at cost" and the rate schedules are designed upon this basis. In practice, however, it is, obviously, sound practice to provide for a small surplus of revenue over estimated costs. Should greater use be made of the service than was anticipated, a greater revenue will result without proportionate increase in expenses; and therefore a greater surplus will also result. This has been the experience of the Commission in connection with the operation of rural power districts.

At the end of this section is given a tabulation of the rural power districts established in connection with the several systems of the Commission, which shows the miles of line, the number of consumers and the rate schedules for each district.

The tabulation on page 67 shows in detail the extensions approved during the year, the number of consumers, the amounts of power supplied, the capital expenditures and the amounts of provincial grant-in-aid of rural lines approved by the Government.

CLASSIFICATION OF SERVICES FOR RURAL POWER DISTRICTS

When contracts between the consumer and the township have been executed, users of power in townships are supplied with electric service under twelve general classes with limitations as follows:

Class	Service	Class demand kilowatts	Phase	Volts	Fuse rating amperes (maximum)
1B	Hamlet Lighting	0.75	1	110	15
1C	“ “	2	1	220 110	35
2A	House Lighting	1	1	110	20
2B	Small Farm Service	2	1	220 110	35
3	Light Farm Service	3	1	220 110	35
4	Medium Farm Service	5	1	220 110	50
5	“ “ “	5	3	220 110	35
6A	Heavy Farm Service	9	1	220 110	100
6B	“ “ “	9	1 and 3	220 110	60
7A	Special Farm Service	15	1	220 110	According to load
7B	“ “ “	15	1 and 3	220 110	According to load

Class I: Hamlet Service—Includes service in hamlets, where four or more consumers are served from one transformer. This class excludes farmers and power users. Service is given under two sub-classes as follows:

Class 1-B: Service to residences or stores. Use of appliances over 750 watts permanently installed is not permitted under this class.

Class 1-C: Service to residences or stores with electric range or permanently installed appliances greater than 750 watts. Combinations of residence and store supplied from one service shall be not less than Class 1-C. Special or unusual loads will be treated specially.

Class II-A: House Lighting—Includes service to all residences that cannot be grouped as in Class I. This class excludes farmers and power users.

Class II-B: Farm Service, Small—Includes service for lighting of buildings and power for miscellaneous small equipment and power for a single-phase motor not exceeding 2 horsepower or an electric range (motor and range not to be used simultaneously) on a small farm of fifty acres or less.

Class III: Farm Service, Light—Includes service for lighting of farm buildings, power for miscellaneous small equipment, power for single-phase motors not exceeding 3 horsepower and electric range. Range and motor are not to be used simultaneously.

Class IV: Farm Service, Medium Single-Phase—Includes service for lighting of farm buildings and power for miscellaneous small equipment, power for single-phase motors up to 5-horsepower demand or an electric range. Range and motor are not to be used simultaneously.

Class V: Farm Service, Medium 3-Phase—Includes service for lighting farm buildings and power for miscellaneous small equipment, power for 3-phase motors, up to 5-horsepower demand, or an electric range. Range and motor are not to be used simultaneously.

Class VI: Farm Service, Heavy—Includes service for lighting of farm buildings and power for miscellaneous small equipment, power for motors up to 5-horsepower demand and an electric range, or 10-horsepower demand without an electric range. Single- or three-phase service will be given at the discretion of the Hydro-Electric Power Commission of Ontario.

Class VII: Farm Service, Special—Includes service for lighting of farm buildings, power for miscellaneous small equipment, power for 3-phase motors from 10- to 20-horsepower demand and electric range. Single or three-phase service will be given at the discretion of the Hydro-Electric Power Commission of Ontario.

SECTION IV

HYDRAULIC ENGINEERING AND CONSTRUCTION

Construction work on five power developments was in progress during the past year. Of these, the greatest in magnitude, from the standpoint of capacity, is the addition to the Queenston development, where the plant is being completed by the installation of a tenth unit. This is followed closely, from the same standpoint, by the Alexander development on the Nipigon river. One development has been completed and brought into service in the Georgian Bay system and another in the Nipissing system, and there is being constructed a single unit development in the Patricia district on the English river at Ear falls.

Investigations are in progress on a number of other power sites. The first of these is at Chats falls on the Ottawa river, where a possible 200,000 horsepower can be developed. Preparations are also being made for the development of the power at Ragged rapids on the Muskoka river, to which reference was made in the last annual report.

The developments on the Muskoka river at Bala were purchased during the year, and rehabilitation was carried out to put certain parts of the hydraulic equipment in good operating condition. Rehabilitation was also effected on some of the hydraulic structures of the undertaking serving the Wahnapiatae district, control of which was obtained by the Commission during the year. In order to provide means of transport for mining developments at Red Lake, in the district of Patricia, the Department of Northern Development of the province of Ontario arranged to have built a number of marine railways on the Chukuni and English rivers, whereby freight may be taken from Hudson, on the Transcontinental railway, directly to Red lake, with trans-shipment only at Ear falls on the English river. The design and supervision of construction of the marine railways were carried out for the Department of Northern Development by the Commission. The Ear falls storage dam at the outlet of Lac Seul, construction of which was commenced last year, was brought into service during the summer of 1929, the engineering in connection with this structure being carried out by the Commission for the Department of Lands and Forests.

NIAGARA SYSTEM

Queenston-Chippawa Development

The decision was reached last year to add a tenth and last unit to the Queenston development. This unit, which is to have a rated capacity of 58,000 horsepower under a head of 294 feet, will be similar, in most respects, to units Nos. 6 to 9 in the same development. Operating experience during the past few years has indicated the necessity of having an additional unit, in order to provide spare capacity during periods of shut-down of other units for maintenance work. When all ten units are available for service, the plant capacity will be increased, although not to the extent of the full rated capacity of the unit. It is estimated that the increased continuous capacity of the plant will be some 12,000 horsepower; but the main advantage of the unit is in its assurance of continuous service at the full capacity for nine units, with one unit out of service for maintenance or repairs.

The installation from forebay to tailwater is similar to that for units Nos. 6 to 9. An extension of the forebay to the north of the No. 9 intake is necessary, the floor of this extension of the forebay being slightly higher than the floor of the remainder. As in the case of units Nos. 6 to 9, the penstock for unit No. 10 is 16 feet in diameter throughout and is equipped with a 16-foot by 10-foot Johnson valve. The turbine is being built by the Dominion Engineering Works of Montreal. Only one change of importance is to be noted in the hydraulic equipment, namely, in the governor, which is of the Morris-Pelton type with motor driven flyballs, the first with this type of drive to be used at Niagara falls.

Construction work commenced at the beginning of January on the extension of the screen house. In the completion of the substructure of the screen house for nine units, provision was made for the convenient extensional work by the building of a small arch dam at the north-east end of the forebay, behind which a small amount of rock excavation was done. It was possible thus to excavate for the extension of the screen house without serious difficulty or danger from water, an important consideration, as the excavation had to be carried down some 45 feet below the operating level in the forebay. The first operation was the construction of the extension of the screen house. This being completed and the steel headgates being in place, the work on the penstock tunnel and trench and power house substructure continued thereafter without danger of flooding from water in the forebay. At the present time, the substructure of the power house is completed, and the turbine and penstock are being installed. This unit will come into service during the summer of 1930.

GEORGIAN BAY SYSTEM

Trethewey Falls Development

The application of "remote control" in the operation of hydro-electric power stations makes possible the utilization of many small water powers which otherwise would be outside the range of economic development. This method of operation not only makes a marked saving in operating charges, but by centralizing the control of the output of power in the hands of one operator,

makes possible the most efficient use of the water. This is particularly true where several developments are situated on the same stream.

One of the latest plants with remote control equipment, recently put into commercial service by the Commission, is that at Trethewey falls on the South Muskoka river. This plant lies immediately above the Hanna Chute station, which was placed in service in October of 1926. Downstream again from Hanna Chute is the South falls station, where the control of all three plants is centralized. A total head of 170 feet is now developed on this stretch of river.

The water discharged from the Trethewey falls plant passes directly into the forebay or headpond of the Hanna Chute station, and that in turn discharges into the headpond of the South Falls plant. Very little pondage is available at Trethewey falls or South falls, while Hanna Chute possesses a large head-pond on which fluctuations in load are easily taken up without much change in level. It is thus evident, in order to obtain the most economical use of water by the three stations, that centralization of control is very desirable and necessary.

A very comprehensive storage system has been installed on the lakes above these three plants, the principal ones being Lake of Bays and Hollow lake. The flow of the river has thereby been substantially improved by these storage reservoirs, so that much greater loads than under natural conditions can be carried by the plants.

The natural head at Trethewey falls was about 24 feet, and the development consists essentially of a concrete dam and power house across the river at the head of the falls, which raises the water 11 feet, giving a total operating head of 35 feet for the plant. The dam consists of three stop-log sluiceways in the river channel, flanked by spillway sections 75 feet long on either side, and a wing wall on the west bank extending from the power house to the high ground above. The power house substructure is of reinforced concrete construction, and contains one 2,300 horsepower turbine, with propeller type runner, which was supplied by S. Morgan Smith-Inglis Company, Limited. A short tail-race channel carries the water across a neck of land to the pool level below. The unit is controlled by a Woodward governor, having the necessary automatic and remote control attachments to enable operation from South Falls. A head-water gauge, similar to the one at Hanna Chute, is being installed, with a duplicate recording instrument at South falls. Thus, the chief operator has before him indications of the headwater levels at the three plants, and can balance the loads to derive the most benefit from the water supply.

A gantry crane of five-ton capacity is installed on the headworks deck for handling the racks and the steel sectional gates; these gates may be used for unwatering the turbine pit.

The new headwater level required the raising of one highway bridge about 6 feet, and the raising of more than a mile of road to a maximum height of 3 feet. A timber log slide has been provided immediately adjacent to the power house.

This station was placed in active service in September, 1929, about one year after the commencement of construction operations by the Construction department of the Commission.

TRETHEWEY FALLS DEVELOPMENT SOUTH MUSKOKA RIVER

Main dam sluiceways

Bala Electric Light and Power Company

The purchase was completed in April, 1929, of the assets of the Bala Electric Light and Power Company. This company owned two power developments at Bala, the first of which contained two units rated at 150 horsepower each, and the second, one unit of 450 horsepower. These generated power for distribution in Bala, Port Carling and the districts surrounding these municipalities. The operation of the plants and system was taken over at that time, and minor repairs made on some of the structures and equipment at plant No. 2. The possession of these plants will be advantageous in the operation of future developments on the Muskoka river immediately downstream. They also serve small but important districts, which now become a part of the Georgian Bay system.

ALEXANDER DEVELOPMENT—NIPIGON RIVER
Core-wall trench in auxiliary dam

THUNDER BAY SYSTEM

Alexander Power Development

The rapidly growing demand for power on the Hydro-Electric Power Commission's Thunder Bay system has necessitated the early completion of the Alexander Power development on the Nipigon river. Already the Cameron Falls generating station, of 75,000 horsepower capacity, has been carrying loads in excess of its rated capacity. About two-thirds of the power output is used by the pulp and paper mills in the district, while the remaining one-third is made up of elevator load and domestic loads in Port Arthur and Fort William.

The Alexander development is situated about one and a half miles below the Cameron Falls plant, and construction work was first started here in the spring of 1927. At the end of that year it was decided to discontinue operations, as the output of the pulp and paper mills had been curtailed, with consequent reduction of power requirements. During 1927 a great deal of preliminary work was done, including the construction of a railway line from Cameron Falls to the site, excavation of the diversion channel, and partial completion of

ALEXANDER DEVELOPMENT—NIPIGON RIVER

Excavation on site of main dam. A semi-hydraulic fill will be built, after excavation to good foundation, between the toe fills at right and left

the main cofferdam. The railway line involved building two bridges, one across the Nipigon river near Cameron falls, and the other across Fraser creek at the lower end.

Before proceeding with a description of the Alexander development itself, a few remarks about the Nipigon river may be of interest. The area drained by this great river is more than 9,000 square miles, and the area of lake Nipigon itself is about one-sixth of this, or 1,500 miles square. Under natural conditions, the outflow from lake Nipigon was remarkably uniform for a river of this size, and by the construction of the dam at Virgin falls in 1925, control of the outflow was obtained. The average flow exceeds 7,000 cubic feet per second, and complete regulation can be obtained with a variation in lake level between the natural high and low water levels. The total drop in elevation between lake Nipigon and lake Superior is 248 feet, and this drop occurs in 32 miles of river channel. With Cameron falls (78-foot head and Alexander (60-foot head) developed, there will remain some 110 feet undeveloped. Of this 110 feet, 105 feet occurs between Cameron falls and lake Nipigon, and is capable of complete development, while the remaining 5 feet or so occurs as river gradient between Alexander and lake Superior, and cannot be economically recovered.

The location of the new development is at Alexander rapids, where the river takes a sharp "S" bend and discharges into a quiet pool or widening of the river. An earth fill dam across the river near the lower end of the rapids will raise the level about 60 feet and flood back to the tailwater level of Cameron falls. Thus, nearly all the head here is artificial, while at Cameron falls a large portion of the head was natural. A channel, the upper part in earth and the lower part in rock, is being excavated across the neck of land formed by the turn in the river, to supply water to the power house which is located on the shore of the pool near the Alexander landing dock. A portion of this channel also serves as the diversion channel to bypass the water during the construction of the main dam. A concrete spillwall, 560 feet long, connects up the end

ALEXANDER DEVELOPMENT—NIPIGON RIVER
Power house construction—Forms for draft tubes—October, 1929

of the dam with the power house on the south side, and an earth embankment on the north side is required to join the power house with the adjacent high land and close the contour.

The main dam is being constructed by the semi-hydraulic fill method, which consists essentially of dumping earth at the two sides of the dam, and washing the finer particles to the centre, by means of monitors, to form an impervious core. A heavy rock fill embankment on the downstream side provides adequate support and drainage for the earth fill. In all, about 500,000 cubic yards of earth will have been placed in the dam on completion.

Very little pondage is available between Alexander and Cameron falls to take care of changes in load, but if the two plants are operated in parallel, the large headpond at Cameron falls of over four square miles in area will also serve the Alexander plant and reduce fluctuations in level to a minimum. Any rise in level, however, will be taken care of automatically by the long concrete spillwall between the dam and the power house.

The power house will be of reinforced concrete construction, and in all will contain about 30,000 cubic yards of concrete. Installed in it will be three 18,000 horsepower units, and provision will be made for a fourth unit when the load justifies its installation. The superstructure will be of brick, and an outdoor transformer station will be located to the north of the power house.

The Nipigon river is justly famous for its trout fishing, and to help preserve this sport, a fish ladder will be provided. This will be of similar design to the one at Cameron falls, which is approved by the Provincial Game and Fisheries department. It is believed that these fishways provide a satisfactory passage for the fish in their annual upstream migration.

Construction, under the jurisdiction of the Commission's Construction department, has been prosecuted vigorously during the past season, and will be continued throughout the winter and ensuing year. It is expected that the plant will be carrying its share of the load to the Twin Cities before the end of 1930.

ELLIOTT CHUTE DEVELOPMENT SOUTH RIVER

Main dam from upstream side. Water surface about six feet below normal level

ELLIOTT CHUTE DEVELOPMENT SOUTH RIVER

Main dam and penstock from downstream side

OTTAWA SYSTEM

Some years ago the Commission served notice of expropriation upon certain of the power sites at Chats falls on the Ottawa river. The title to these power sites passed to the Commission during 1929, and as they round out the control of the Commission in all of the Ontario portion of the power rights, it is possible to proceed with the development of this site in conjunction with a privately-owned corporation, which will develop the Quebec portion of the power. It is hoped that satisfactory arrangements, as to development of the whole scheme, can be made and the work permitted to proceed.

According to present plans, there will be installed in the Ontario section, three units of 30,000 horsepower, with provision for a fourth unit. The site is well adapted for an economic development, in spite of the fact that the dam is a very extensive structure. However, the location chosen for the dam is such that it will nowhere be very high, and its cost, therefore, is not excessive. The flow of the Ottawa river is regulated to quite a degree by storage works on the main river and on certain of the tributaries above Chats falls, so that a well-sustained flow in dry years may be depended upon; and, in addition to this, the extent of Chats lake, which has an area of 18,600 acres, provides pondage for daily and weekly regulation to suit the load demands on the plant.

NIPISSING SYSTEM

Elliott Chute Development

The Elliott Chute development on the South river, about two miles upstream from Bingham Chute, came into service in October, 1929. This development, which has a capacity of 1,800 horsepower under 39-foot head, is similar in some respects to the Trethewey development, in that it is a single vertical unit plant operated by remote control from Bingham Chute. The headpond of the plant has a capacity of 5,000 acre feet, and the storage in this headpond was the essential part of the development, as without additional storage it was becoming increasingly difficult to operate the Bingham Chute and Nipissing plants effectively. Relocation of certain of the Township roads and construction of bridges thereon were involved in the building of this plant.

MADAWASKA SYSTEM

During the past year the Commission purchased properties from the M. J. O'Brien Company, including power developments on the Mississippi and Madawaska rivers, undeveloped sites on the Madawaska, transmission lines, distribution systems and franchises in Renfrew and other municipalities.

The development at Galetta on the Mississippi river has an installed capacity of 1,400 horsepower. From it there are transmission lines to Arnprior, Galetta, Carp, Kinburn, and other nearby points. At Calabogie, on the Madawaska river, there is an installation of 6,000 horsepower, with an additional 3,000 horsepower awaiting completion. Power from this plant is distributed in Renfrew, Calabogie, and six other municipalities.

ELLIOTT CHUTE DEVELOPMENT—SOUTH RIVER

New township road built to replace road closed by storage reservoir

ELLIOTT CHUTE DEVELOPMENT SOUTH RIVER

Interior of flume from pipe line, showing turbine

There are also in the properties purchased, four undeveloped sites on the Madawaska river, at Claybank, Stewartville, Burnstown and High Falls, having a combined capacity of 85,000 horsepower. Possible storage developments on the river make these sites of great potential value for future development. Investigations respecting existing and future developments, and the hydraulic characteristics and storage possibilities of the river, have been carried on throughout the year, and are continuing.

WAHNAPIITAE DISTRICT

The Commission recently obtained, by stock purchase, a controlling interest in the Wahnapiitae Power Company. This company owns and operates three hydro-electric plants on the Wahnapiitae river, with transmission lines to Sudbury and a number of mining and metallurgical works. The total installed capacity is 15,700 horsepower.

The three developments are similar in style, each having headworks at the end of the dam, with a short canal conducting the water to short penstocks.

No. 2 plant, at McVitties, is furthest upstream, and contains two 1,200 horsepower turbines operating under a head of 38 feet. Next in order is the original plant, commenced in 1904, with a single unit of 1,200 horsepower capacity, and enlarged in 1908 and 1915 to a total capacity of 6,300 horsepower in three units, under a head of 52 feet. This development is situated at Coniston, about eight miles east of Sudbury. About six miles downstream from Coniston is plant No. 3, completed in 1924, with two units of 3,500 horsepower capacity each, under a head of 54 feet. Storage works are in course of construction at the outlet of lake Wahnapiitae, about twelve miles upstream from plant No. 3. A side dam was built at plant No. 2, replacing one built about eighteen years ago. Growing load demands in the district will require the completion of the storage works and the installation of an additional unit at plant No. 2.

PATRICIA DISTRICT

Ear Falls Development

The Ear Falls conservation dam, to which reference was made in the last annual report, was completed during the spring of 1929, and a portion of the spring flood was stored in Lac Seul. At the present time the outflow is being controlled by the dam. The cost of the conservation dam here was shared by the provincial governments of Manitoba and Ontario, and by the Dominion Government, as power sites controlled by all of these will benefit from the regulation of the flow on the English river.

The magnitude of the storage basins in this part of the Province is immense, and comparable to artificial storage created in other parts of the Dominion and in other parts of the world. The capacity of Lac Seul between minimum and maximum levels that it is intended to use for storage is 145,000,000,000 cubic feet. Lake Nipigon has a capacity twice this, and Lake of the Woods is another basin with immense storage capacity. To give scale to these storage

NORTHERN ONTARIO DEVELOPMENT

Ear Falls dam at outlet of Lac Seul Power house construction proceeding at left

developments, they may be compared with some of the other outstanding storage basins at present in use, as in the table below:

Storage Reservoir	Capacity of Reservoir (acre feet)
Assuan (Egypt).....	1,800,000
Elephant Butte (Texas).....	2,640,000
Gatun (Panama).....	4,200,000
Gouin (Quebec).....	3,700,000
Lac Seul (Ontario).....	3,300,000
Nipigon (Ontario).....	6,700,000

Lac Seul and Lake Nipigon are both extremely cheap storage developments when compared with others, in their cost per acre foot.

In the design of the conservation dam at Ear falls, provision was made for the future development of water power, if a demand for this should arise, and as this demand was already in evidence by the beginning of the year, in order to provide power for mining developments at Red lake, construction was commenced of a single unit plant, with a capacity of 5,000 horsepower. The ultimate capacity of the site is about 30,000 horsepower under a head of 36 feet, and the present unit is so laid out that it will form a part of the complete development when additional power is required in that locality. The present scheme provides two wood stave pipe lines, 12 feet in diameter, about 137 feet long, by which water supplied for the turbine will be carried from the power sluices at the dam to a pressure flume, in which a single vertical turbine is installed. The turbine unit will have a rated capacity of 5,000 horsepower under a head of 36 feet, at a speed of 180 revolutions per minute, is of the propeller type, and was built by the Dominion Engineering Works of Montreal. A transformer station is being built to step up the power for transmission to the Red Lake district about forty miles distant.

Transportation Route—Hudson to Red Lake

The Commission's engineers assisted the Department of Northern Development of the province of Ontario by taking charge of the design and construction of a group of marine railways on the English and Chukuni rivers. These make it possible to carry freight from the Transcontinental railway at Hudson into Red lake, with trans-shipment at Ear Falls only. The total distance travelled by craft proceeding from Hudson to Red lake is about 160 miles, and in this distance there is a transfer railway to permit them to lower the cargo from the level of Lac Seul at the Ear Falls dam to the English river below the dam, whence loaded scows proceed down the English river and up the Paqwash and Chukuni rivers, on which, at various places, there are four marine railways designed to handle scows of the maximum capacity in use. These railways have been working satisfactorily for the navigation season of 1929, and more than 3,000 tons of equipment and supplies have been transported over the route at a very considerable saving in transportation costs.

HYDRAULIC INVESTIGATIONS

St. Lawrence River

Some months ago, the chief engineer and the chief hydraulic engineer of the Commission were appointed a body by the Ontario government to co-operate with the Canadian section of the Joint Engineering Board dealing with the St. Lawrence development, to the end that some scheme of power development of the International section of the river, mutually agreeable to the interests represented by these groups, might be arrived at. Several conferences have been held, and variations in the proposed schemes of development discussed, investigated and compared, to the end that general plans as to developed head, location of structures, etc., might be agreed upon. This work also is proceeding at the present time.

SECTION V

ELECTRICAL ENGINEERING AND CONSTRUCTION

(STATION SECTION)

NIAGARA SYSTEM

Generating Stations on the Niagara River

Queenston generating station is being extended to include No. 10 unit. A 55,000-kv-a. generator, a bank of three 18,330-kv-a. transformers, two 135,000-volt oil circuit-breakers and other necessary switching equipment have been purchased. As this is the final extension to the station, permanent end walls will be erected for both the power-house and screen-house. The work should be completed and the unit in service before the fall of 1930.

Transformer and Distributing Stations

Niagara District—A new outdoor 110,000-volt transformer station has been erected on the Commission's right-of-way near the American Cyanamid Company's plant to supply this Company with power. Three banks of 7,500-kv-a., single-phase transformers obtained from Niagara transformer station were converted to outdoor type for this installation.

Authorization has been given for the purchase and installation of four oil circuit-breakers on outgoing 110,000-volt lines, for the installation of an outdoor 110,000-volt bus and for the re-locating of the existing outdoor line oil circuit-breakers at Niagara transformer station.

Authorization was given for the construction of an outdoor 110,000-volt transformer station at Port Colborne near the International Nickel Company's plant. The installation will consist of two banks of transformers and a spare unit, together with 110,000-volt switching equipment for the incoming line and transformers, and 13,200-volt switching equipment for the outgoing feeders. Seven 5,000-kv-a. single-phase, self-cooled transformers have been purchased.

At both Welland and Thorold transformer stations load conditions necessitated the installation of additional transformer capacity. A new bank of three 5,000-kv-a. single-phase units was installed at each station. The bank at Welland has already been placed in service while the bank at Thorold will be

in service by the middle of November. Two additional 12,000-volt feeders were installed at the Welland station to permit power to be supplied to Port Colborne at 12,000 volts.

Engineering assistance was given to the municipality of Merriton respecting the purchase and installation of a 1,500-kv-a. three-phase transformer and other necessary equipment to provide additional capacity at its station. Assistance was likewise given to the municipality of Niagara-on-the-Lake, where a second 500-kv-a. three-phase transformer and additional 13,200-volt and 2,300-volt switching equipment was installed. Improvements were made on the equipment for metering the Stamford township load. The municipality of Stamford township was given engineering assistance respecting the purchase of a 1,500-kv-a. three-phase transformer and additional switching equipment. The necessary equipment for metering the load at the Queenston Quarries Company's new station near St. Davids was purchased and installed.

Hamilton and Dundas District—A third bank of three 5,000-kv-a. transformers was installed at Hamilton transformer station, and 13,200 volt metal-clad switching equipment for four circuits has been purchased. Authorization was also given to install steel structures and switching equipment to provide for one additional 110,000-volt incoming line. Work on this is not yet completed.

Authorization has been given for the installation of a second bank of three 5,000-kv-a. transformers in Dundas transformer station, also two 13,200-volt feeders to supply power to Hamilton. The transformers have been ordered.

A new pole-type station known as Vinemount distributing station was installed, consisting of a bank of three 150-kv-a. transformers with the necessary switching equipment and metering. Meter changes were also made at Waterdown distributing station.

Toronto and York District—At Toronto-Bridgman transformer station, work was commenced on the replacement of four oil circuit-breakers in the 110,000-volt line position with breakers of greater interrupting capacity. Three of these have already been changed.

At Toronto-Wiltshire transformer station increased capacity was provided by the installation of a fourth bank of three 5,000-kv-a. transformers with the necessary 110,000-volt and 13,200-volt switching equipment.

Toronto-Leaside Transformer Station

Engineering and construction work has been continued on the Toronto-Leaside transformer station throughout the year. The first two 25,000-kv-a. synchronous condensers are being installed and additional apparatus has been ordered.

Orders have been placed for the third and fourth bank of transformers which will be duplicates of the first two banks and for two more synchronous condensers duplicates of the two now being installed, also four more 220,000-volt oil circuit-breakers.

An 80-ton gantry crane has been purchased and erected for use in the installation of the condensers, the first two of which will shortly be in operation.

TORONTO-LEASIDE CONDENSER STATION

View from east, October, 1929

The programme for the coming year includes the installation of all the above apparatus on order, also the necessary 110,000-volt and 13,200-volt switching equipment, control and service equipment to complete the station to 180,000-kv-a. capacity. A dispatcher's board will also be installed which will represent in miniature the 220,000 and 110,000-volt lines and stations supplying the Toronto district.

At New Toronto distributing station increased transformer capacity was obtained by the installation of one new 3,000-kv-a. three-phase transformer inside the building, replacing a 1,500-kv-a. three-phase unit, and by the installation of a bank of three 1,500-kv-a. single-phase units outside the building. A spare 3,000-kv-a. outdoor transformer was also purchased. These changes necessitated the erection of steel structures and extra switching equipment and the installation of a cooling tower. The municipality of Mimico was given engineering assistance in the purchase, test and installation of one 1,500-kv-a. three-phase transformer with the necessary switching equipment.

Scarborough township and Albion Park distributing stations are two semi-outdoor installations which were placed in service this year. The former comprises a bank of three new 1,000-kv-a. single-phase transformers and the latter two 300-kv-a. three-phase units released from Etobicoke township distributing station. At Mount Joy distributing station one of the 150-kv-a. three-phase transformers was replaced by a bank of three 150-kv-a. single-phase units. Blantyre distributing station was dismantled and the three 300-kv-a. transformers transferred to reserve equipment. At Newmarket distributing station improved voltage conditions were obtained on the Newmarket 4,000-volt feeder by the installation of a bank of three $37\frac{1}{2}$ -kv-a. transformers as boosters. Six old 300-kv-a. single-phase transformers at York Mills distributing station are being rebuilt with new windings of modern design.

London District—The capacities of Broughdale and Glendale distributing stations have been increased by the installation of a bank of three 250-kv-a. transformers in each station, replacing the original 150-kv-a. units.

Kitchener District—At Elmira distributing station the capacity was increased by the installation of a bank of three 500-kv-a. transformers to replace the original 250-kv-a. units.

Stratford District—The capacity at Stratford transformer station was again increased by replacing the 1,250-kv-a. transformers in bank No. 1 with three 2,500-kv-a. units which had been rebuilt from transformers similar to those removed. The cooling water-pumps were replaced by larger capacity units.

Changes in the district served by this transformer station include the installation of lightning arresters at Dublin, Milverton and Tavistock distributing stations and the replacement of the 150-kv-a. three-phase transformer at Walton distributing station by three 150-kv-a. single-phase units. Assistance was given to the municipality of Goderich in the purchase and installation of a bank of three 500-kv-a. transformers together with changes and additions to the 26,400-volt and 4,000-volt equipment and feeders.

Woodstock District—Changes were made to the 13,200-volt metering equipment in Woodstock transformer station in order to measure power delivered to the Dufferin Construction Company at its Innerkip quarry. Engineering assistance was given the municipality of Woodstock in the purchase of a bank of three 500-kv-a. transformers and switching equipment.

St. Thomas District—Changes authorized for St. Thomas transformer station in 1927, and partly finished in 1928, included increased transformer capacity and improved relay protection. This work was completed this year. A new 110,000-volt oil circuit-breaker was installed and the station was arranged to accommodate the new line from Niagara.

At West Lorne distributing station equipment for a new rural feeder with the necessary metering was installed.

Brant District—Changes in equipment at Brant transformer station include the installation of improved heavy-capacity oil circuit-breakers in three of the 26,400-volt feeders, in place of the original lighter-duty breakers.

Improvements were made in the metering to totalize the Plattsville and Princeton feeder load at Drumbo distributing station and lightning arresters were installed on the 26,400-volt incoming line. Arresters were also installed in a similar position at Waterford distributing station.

Kent District—Due to the shifting of the load centre, Fletcher distributing station was dismantled and a new pole-type station was installed at Merlin, consisting of a bank of three 150-kv-a. transformers and two outgoing 8,000-volt feeders. At Tilbury distributing station increased transformer capacity was provided by the installation of an additional bank of three 75-kv-a. single-phase transformers. Lightning arresters were also installed on the incoming 26,400-volt line at this station and at Rondeau distributing station.

Essex District—Two new 26,400-volt stations known as Ford City and LaSalle distributing stations were installed in this district. The former is a semi-outdoor installation with a transformer capacity of one 3,000-kv-a. three-

NIAGARA SYSTEM

American Cyanamid 110,000-volt transformer station

phase unit while the latter is a pole-type installation with a transformer capacity of three 150-kv-a. units. Leamington distributing station capacity was increased by the installation of three 500-kv-a. transformers replacing the original 250-kv-a. units. Engineering and construction work was done for the Union Natural Gas Company on the installation of a pole-type station consisting of three 150-kv-a. transformers with the necessary switching equipment. Work was similarly done for Walkerville on the installation of an additional 3,000-kv-a. three-phase transformer, the rearrangement of the station wiring and the replacing of original 4,000-volt oil circuit-breakers with heavier duty units in the Walkerville municipal station. Engineering assistance was given Windsor Hydro-Electric system in the purchase and test of an additional 3,000-kv-a. three-phase transformer and additional switching equipment. Work was done on metering installations at Walkerville Junction distributing station and Walkerville municipal station No. 2, at the Canadian Steel Corporation-Ojibway and the Union Natural Gas Company stations.

St. Clair District—At Watford distributing station, the capacity was increased by replacing the 150-kv-a. three-phase transformer with a 300-kv-a. unit. Changes were made to the equipment metering the loads to Bridgen and to the Ontario Supply and Transport Company.

GEORGIAN BAY SYSTEM

Severn Division

The three 40-kv-a. transformers at Coldwater distributing station were replaced by three 150-kv-a. units.

Eugenia Division

At Eugenia generating station a 1,500-kv-a. synchronous condenser transferred from Peterborough Railway converter station was installed and placed in operation for regulating the voltages on the interchange of power between the Severn and Eugenia divisions. Two 1,500-kv-a. auto-transformers were purchased and will be installed for additional voltage regulation.

At Holland Centre a new pole-type distributing station with one 10-kv-a. single-phase transformer was installed.

At Meaford distributing station the 300-kv-a., three-phase transformer was replaced by a bank of three 250-kv-a. single-phase units. The 300-kv-a. unit taken from Meaford was installed at Holyrood distributing station to replace the bank of three 50 kv-a. transformers.

Wasdells Division

To provide for direct transfer of power between the Muskoka and Wasdells divisions a 1,500-kv-a., 38,000/22,000-volt, three-phase auto-transformer was installed at Wasdells Falls generating station. At Pinedale distributing station the 75-kv-a. three-phase transformer was replaced by a 150-kv-a. unit.

Muskoka Division

The Trethewey falls generating station was placed in service in September with remote control from South falls generating station. The generating capacity of the system was thereby increased by 2,000-kv-a.

ST. LAWRENCE SYSTEM

Increasing load demands throughout this district were met by the installation of a new pole-type station known as Lyn distributing station—consisting of a bank of three 100-kv-a. transformers with switching and metering equipment—and by the installation at Cornwall Howard Smith Paper Company distributing station, of an additional 750-kv-a. three-phase transformer.

RIDEAU SYSTEM

A 300-kv-a. three-phase transformer was installed on the site of the Smiths Falls transformer station and is known as Rideau temporary transformer station. It will serve as a connecting link between the Rideau system and the new eastern high-voltage transmission line. A pole-type station known as Forfar distributing station with one 100-kv-a. transformer was installed.

Increased transformer capacity was provided at Kemptville distributing station by replacing the 150-kv-a. transformer with a 300-kv-a. unit.

TRETHEWEY FALLS DEVELOPMENT - SOUTH MUSKOKA RIVER
Generating station interior - September, 1929

THUNDER BAY SYSTEM

Generating Stations on the Nipigon River

Due to the load demands on this system developing rapidly in the past year, the equipment at Cameron falls generating station has become loaded to capacity and it was necessary to proceed with the work at Alexander power development which was deferred in 1927. An order has been placed for three 15,000-kv-a generators and construction work will proceed so that the station will be ready for service in time for the peak load in the fall of 1930.

Transformer and Distributing Stations

Outdoor switching equipment is being installed at Port Arthur transformer station to provide for a third 110,000-volt incoming line.

OTTAWA SYSTEM

The capacity of Nepean Rural Power District distributing station was increased by replacing the three 75-kv-a. single-phase transformers with three 200-kv-a. units.

CENTRAL ONTARIO AND TRENT SYSTEM

Generating Stations

The four 1,125-kv-a. transformers which had been in operation at Seymour generating station since it was first placed in service were replaced by two new 3,000-kv-a. transformers.

Transformer and Distributing Stations

A new pole-type station consisting of three 100-kv-a. single-phase transformers to serve the Cobourg rural power district was installed at the Cobourg distributing station site. Other new stations include Kingston switching station and Oshawa condenser station. In the latter case a 5,000 kv-a. synchronous condenser with regulator and switching equipment was purchased and installed for regulating the voltage at Oshawa.

Increased transformer capacity was provided at several points, namely, at Kingston distributing station by installing one 1,500-kv-a. three-phase transformer replacing a 750-kv-a. unit; at Napanee distributing station by replacing one of the 300-kv-a. units with a 750-kv-a. transformer; at Newcastle by the replacement of a 100-kv-a. unit with one of 300-kv-a. capacity; at Norwood by the installation of an additional 300-kv-a. transformer obtained from Picton distributing station where it was replaced by a 750-kv-a. unit; and at Port Hope distributing station by replacing the 300-kv-a. transformer with one of 750-kv-a. capacity.

Assistance was rendered to the municipality of Whitby in the purchase and installation of a second 750-kv-a. transformer with switching equipment.

Additional feeder equipment was installed in Bowmanville and Lindsay and metering changes were made at the latter station and at Sulphide distributing station.

NIPISSING SYSTEM

Generating Stations

Elliott Chute generating station was placed in operation in September under manual control. The generating capacity of the system was thereby increased by 1,800-kv-a. The automatic and remote control features are not yet completed.

Transformer and Distributing Stations

Due to the change in load centre at North Bay, and in order to provide for additional capacity, North Bay transformer station No. 2 was installed, consisting of two 750-kv-a. three-phase transformers and other necessary equipment. One of these transformers was removed from North Bay transformer station No. 1, leaving only the original bank of three 450-kv-a. transformers at the latter station. The other unit was transferred from Hanover distributing station on the Georgian Bay system. Suitable reactances were installed so that the stations can be operated in parallel.

EASTERN ONTARIO HIGH-VOLTAGE LINES

Smiths Falls transformer station. Viewed from south, November, 1928

EASTERN ONTARIO HIGH-VOLTAGE LINES

Smiths Falls transformer station, which was installed in 1928, was placed in service on the 110,000-volt transmission lines of eastern Ontario in November, 1928. A transformer station was erected at Ottawa to supply power to the city of Ottawa from the 110,000-volt lines. The ultimate capacity of this station will be three or four banks of 3,000-kv-a. single-phase units. The present installation consists of one bank only and a spare unit. The station was placed in operation in October.

PATRICIA DISTRICT

A generating station is being built at Ear falls on the English river in the vicinity of the Red Lake mining district to supply power to Howie Gold Mines Limited.

Power will be generated at 6,600-volts and stepped up through banks of single-phase transformers to a transmission voltage of 44,000 volts. For the present installation a 5,000-kv-a. generator, four 750-kv-a. transformers and the switching equipment were purchased and delivered to the site. The station should be in operation about January, 1930.

SECTION VI

TRANSMISSION, DISTRIBUTION AND RURAL SYSTEMS

TRANSMISSION SYSTEMS

During the past year, work resulting from increased loads, new power customers and improvements to the systems under the control of the Commission, has kept the Transmission section very actively engaged in the design and construction of lines throughout the Province.

On the second, 25-cycle, 220,000-volt circuit for bringing power from the Gatineau River developments to the Niagara system at Toronto, progress has been consistent with the programme laid down. A 60-cycle network has been completed between the Ottawa River, Smiths Falls, Kingston and Brockville.

In the Niagara system, construction of 110,000-volt lines has been extensively carried on, in addition to the usual activity in the lower voltage lines.

It will be noted, in the following paragraphs, that a new system has been acquired by the Commission during the past year and has been incorporated in the new Eastern system as the Madawaska district.

A map showing the various transmission lines of the Commission is to be found at the end of this report and tabulated details are presented in appendix II.

NIAGARA SYSTEM

220,000-volt Line

An additional 112.02 miles of single-circuit, steel-tower line, comprising part of the second 220,000-volt circuit has been built between Hastings inter-switching station and Woodbine Avenue, Toronto. This portion of the second line is now complete and is in service to augment the first circuit which was completed in 1928.

110,000-volt Lines

During the past year the construction of 110,000-volt lines has been actively carried on. The most important line erected was a steel-tower line, 103.61 miles long, between Allenburg junction and St. Thomas transformer station. This line has two circuits of 605,000 circular mil, steel-reinforced, aluminum conductor.

Other double-circuit, 110,000-volt, steel-tower lines were built between Queenston forebay structure and Cyanamid transformer station—3.3 miles—and between Michigan junction and Crowland junction—3.50 miles.

Single-circuit, steel-tower lines were built between Crowland junction and International Nickel transformer station—5.93 miles—and between Wabash junction and Michigan junction—4.03 miles.

Single-circuit, twin-pole lines were built between Crowland junction and McCabe Avenue junction—0.38 miles—from the end of the steel-tower line to

GATINEAU POWER SUPPLY—NIAGARA SYSTEM

GATINEAU POWER SUPPLY NIAGARA SYSTEM
Stringing cable on the second 220,000-volt circuit, showing the method of braking the reels while the cable is being paid out

the International Nickel Company—0.59 miles—and from Hamilton junction to Hamilton transformer station—1.25 miles.

Other Lines

Between pole 543 at Fletcher and a new distributing station at Merlin, 4.7 miles of 26,400-volt line has been completed. Merlin was formerly fed at 4,000 volts.

Between Essex transformer station and Malden junction—7.03 miles—and between Gosfield junction and Leamington distributing station—8.61 miles—single-circuit, 26,400-volt lines have been constructed to augment lines in the Essex County loop.

From Wiltshire transformer station to Weston distributing station, 4.61 miles of 13,200-volt line having two circuits of 4/0 steel-reinforced aluminum conductor, were completed and a tap from Albion Park junction, 1.15 miles long, was built to Albion Park distributing station.

From Hamilton transformer station to Vinemount distributing station, 9.2 miles of single-circuit, 13,200-volt line were constructed. This is the first low-voltage line to be built from the above station. Similarly, the first low-voltage line from the new Leaside transformer station was built to supply Scarborough Township distributing station, a distance of 5.47 miles.

GEORGIAN BAY SYSTEM

Eugenia District

Between Kilsyth distributing station and Tara distributing station, 6.80 miles of 22,000-volt circuit has been added to the existing 4,000-volt wood-pole line.

Muskoka District

Between Kilworthy junction and Waddells Falls generating station a single-circuit, 38,000-volt line, 8.36 miles long, has been completed to be used as a tie line between the Muskoka and Waddells districts.

Severn District

Between Waubaushene distributing station and Midland distributing station, 9 miles of single circuit, 4/0 steel-reinforced, aluminum conductor have been completed in order to take care of increased elevator loads at Midland.

Waddells District

Between Greenbank junction and Port Perry junction—1.75 miles; Port Perry junction and Uxbridge distributing station—5.75 miles, and between Port Perry junction and Port Perry distributing station, the 4,000-volt lines formerly connecting these stations have been reconstructed and reinsulated for 22,000 volts.

NIPISSING SYSTEM

A 22,000-volt circuit of number 2 steel-reinforced aluminum conductor has been added to the existing pole line between Bingham Chute generating station and North Bay distributing station and a single-circuit, 22,000-volt line has been built from Elliott Chute generating station to tie in with the circuits to North Bay. In addition, a lead-covered cable has been erected on wood poles between Elliott Chute and Bingham Chute for the remote control of Elliott Chute generating station.

See also Frontispiece

EASTERN ONTARIO HIGH-VOLTAGE TRANSMISSION LINES

Smiths Falls to Kingston 110,000-volt line. A rocky section looking north near Battersea.
Note the rock footings

MADAWASKA SYSTEM

The transmission lines in this district form part of the distribution system acquired by the Commission during the past year and include 32.25 miles of 33,000-volt, wood-pole line between Calabogie generating station and Arnprior and 7 miles of 11,000-volt line between Galetta generating station and Arnprior distributing station.

EASTERN ONTARIO HIGH-VOLTAGE TRANSMISSION LINES

High-tension lines in eastern Ontario designed to supply the St. Lawrence, the Rideau, the Ottawa, and the Central Ontario and Trent systems from power plants on the Gatineau river, and reported as under construction in last year's report, have now been completed and include:—2.05 miles of double-circuit, steel-tower line between the Ottawa River crossing at Remic Rapids and Ottawa junction; 38.93 miles of single-circuit, wood-pole line between Ottawa junction and Smiths Falls transformer station; 49.62 miles of single-circuit, steel-tower lines between Smiths Falls and Kingston transformer station, and 24.33 miles of single-circuit, wood-pole line between Smiths Falls and Brockville.

TELEPHONE LINES—ALL SYSTEMS

Between the Ottawa river and Toronto 200 miles of telephone circuit have been completed and placed in service to facilitate the operation of the 220,000-volt transmission lines. Excellent communication is now available direct from the Commission's head office in Toronto to Pagan Falls, 238 miles.

Between Dundas and Kitchener, 48 miles of copper telephone circuit was added to the existing telephone line which parallels the 110,000-volt transmission line. This addition was made necessary in order to relieve traffic on the former circuits between these two points.

In the Niagara district rearrangements have been made, and two new copper circuits strung between the Ontario Power and Toronto Power transformer stations. In addition to providing urgently required relief, the new circuits are so connected to the existing circuits in the system that they provide an additional circuit to Toronto.

Between Davenport and Wiltshire transformer stations in Toronto, installation has been completed of an underground, pilot-wire cable, containing 16 telephone circuits to be used for communication between these two points and to tie in with the Niagara lines.

In all telephone work completed during the last year, special attention has been paid to making the various circuits "noise free" and considerable work in this connection has been done in the system used in the operation of the lower voltage transmission lines.

DISTRIBUTION AND RURAL SYSTEMS

The work carried on by the Distribution section of the Electrical Engineering department covers the engineering for the construction of rural lines, distribution feeder lines, metering equipments, distribution systems for municipalities, etc. A tabular report of the work done during the past year may be found in Appendix III of this report.

SECTION VII

THE LABORATORIES

This department has experienced during the past year an increased demand for its services from other departments of the Commission. This has necessitated additions to the equipment and staff.

Special mention may be made of the following features of the year's operations which are dealt with in greater detail below: the increased pressure upon the Approvals laboratory, which has been partially relieved by an addition of fifty per cent. to the testing space and the installation of additional equipment; the expansion of the field inspection in both the electrical and physical sections; the valuable results of the programme of concrete research and inspection of concrete structures, and the close study which is being made to detect abnormal operating phenomena on the 220,000-volt lines.

There has been an increasing interest taken by the municipalities in the department, but there is still room for improvement in this direction. It is hoped that the municipalities will cultivate a closer contact, as the department can be of great service to them.

The department has continued its co-operation with other engineering and scientific organizations. Proof is continually being afforded of the mutual benefits resulting from contacts made in this cooperative work with organizations such as The National Research Council of Canada, The Ontario Research Foundation, The Canadian Engineering Standards Association, The Engineering Institute of Canada, The American Institute of Electrical Engineers, The American Society for Testing Materials, The National Fire Protection Association, The International Electrotechnical Commission, and The International Association of Electrical Inspectors.

High-Tension and General Electrical Laboratory

The general nature of the work carried out by this section has not altered appreciably from that of previous years, with the exception that considerably more shop inspection has been done by various members of the staff.

Shop Inspection

Routine shop inspection of transformers, rotating machinery and other apparatus has been conducted on a much larger scale than heretofore. Inspection of insulators throughout their process of manufacture has been given a larger place in the activities of this department.

Lightning Investigations

Records of lightning surges have been obtained during the year though the general investigation has been carried on in a very modest way. Additional information has been obtained on ground resistances and on the relative accuracy of various methods of testing them. A systematic improvement in the tower ground resistance in the eastern section of the 220,000-volt line to Paugan Falls was carried out during the summer to reduce the chances of interruptions to service from lightning.

The Commission is considering the matter of extending this work to a considerable degree by the application of the cathode ray oscillograph and lightning generator.

Special Tests of Equipment

Investigations have been made of the application and effectiveness of various types of apparatus, equipment, and materials, their uses and proposed uses. Much of this is routine work but frequently the requirements of standardized specifications are called in question and special studies must be made.

Radio Interference

Further attention has also been given to the problem of radio interference, and in a number of cases satisfactory solutions have been proposed.

Meter and Standard Laboratories

Standards

This section of the Laboratories supervises the maintenance of the standards by which the electrical meters used by the Commission for its private use are checked. The equipment maintained is complete and satisfactory for this purpose.

Special Equipment

Equipment having special electrical characteristics is purchased or built from time to time as the need arises: the meter shop is frequently called upon for work of this kind.

Meters

A large number of watthour meters has been repaired and others rebuilt ready for inspection by the Dominion Department of Gas and Electricity Inspection. Repairs and adjustments to various types of meters, such as voltmeters, ammeters, wattmeters, meggers, time switches, etc., have been made on a somewhat larger scale than in previous years.

Commercial Tests

This section has made a considerable number of tests for other organizations and for individuals. Among the more important of these tests are: calibration of meters and load and efficiency measurements in industrial plants. The department has recently undertaken the testing of linemen's gloves for a large organization in eastern Canada. These tests are made periodically in accordance with a carefully arranged programme adopted by the organization to safeguard the workmen.

Illumination Laboratory

Lamp Testing

In keeping with the increased volume of lamp sales during the past year, the Illumination section of the Laboratories has tested a proportionally larger number of lamps than during any previous year.

KLYDONOGRAPH INSTALLATION AT LEASIDE TRANSFORMER STATION

This instrument records disturbances of very short duration which may arise on the lines and be transmitted to the station equipment

The sole purpose of this testing is to maintain the quality of "Hydro" lamps. The method of systematically testing samples from the run of the factory for the Commission's orders enables the relative life performance of the various sizes and types of lamps to be observed. By making tests to determine the effects of variations in construction, it was possible to cause an appreciable improvement in the life performance of some of the smaller sizes of lamps.

To settle a point raised by a user of "Hydro" power and lamps, a quantity of Lunar (blue bulb) lamps were tested in comparison with similar lamps constructed with clear bulbs. The results indicated that the blue bulb does not shorten the life.

The life of series lamps is generally so much greater than their rated value that very few of these tests are run to completion, it being necessary to discontinue the tests after the lamps have burned well beyond the stated requirements.

Commercial Tests of Lighting Equipment

Tests of this kind are confined principally to industrial and commercial lighting equipment. Most of this has been standardized for several years, and the few tests made during the year were for the purpose of obtaining comparative information relative to American and European lighting glassware. There are large differences in efficiency among different brands of glassware that appear equal in all other respects. This service has been utilized by several "Hydro" municipalities. One of the largest has made repeated use of the facilities of the Laboratory to obtain data relative to competitive brands of street lighting glassware before contracting for supplies.

Lighting Service

This service, which is rendered upon request, includes inspection and survey of unsatisfactory lighting conditions with plans for their rehabilitation, lighting plans for new buildings and advice regarding unusual lighting requirements.

A few of the managers of local municipalities have availed themselves of this service and repeated requests for service have come from this small group. In most cases the service has been requested on behalf of power users in the municipalities.

On several occasions it was necessary to make laboratory tests of equipment in connection with some of the problems. In this respect the laboratories are exceptionally well equipped to serve the needs of customers of the municipalities.

Automobile Headlight Testing

Several years of study and observation of the illumination of highways by means of automobile headlamps have resulted in a reduction in the number of types of optical equipment to a very few that fulfil the requirements of the specifications based upon present-day knowledge of the subject. Improvements in headlamps (except for the form of the housing) are infrequent, consequently very few tests are required. However, many times during the year experimental models of equipment are submitted by inventors for examination with a view to official tests if the designs indicate the possibility of satisfactory results.

Engineering Materials Laboratory

The amount of work handled by this section has exceeded that of any previous year, and while as much research work as time permitted has been carried out, of necessity the activities of the section have been largely of a routine nature.

Inspection

The inspection division of the laboratory has had an especially busy year. In addition to the work entailed in the inspection of materials for a year of increased construction, it has been found advisable to enlarge the list of materials usually examined so that at present a very large proportion of those purchased are inspected either completely or in part, as may be found advisable, depending upon the importance of the particular materials and their sources of supply. While a very large proportion of these standard materials are found to be acceptable, rejections are sometimes necessary because of defects, but more frequently on account of their not being of the grade ordered. This work, in addition to eliminating objectionable material, enables our engineers to compare the products from the various sources of supply, and is of value in making further purchases.

Our inspectors have been required to fill another very important part in addition to inspection. Very frequently, and to a greater extent during the past year, it has been found difficult to obtain materials in sufficient time to meet our construction schedules. From their close touch with the work and their intimate knowledge of the plants and other organizations, the inspectors are in an advantageous position to expedite material, and in some cases this feature becomes more important than the inspection itself.

General Research

No new investigations have been carried out in the past years, except those arising from routine work, to which solutions are immediately required. Several

Chart showing degree of temperature control obtained in the concrete specimen storage room in the field laboratory at Queenston as a result of apparatus developed by the Engineering Materials Laboratory.

problems of the latter type have been studied and solved, and in some instances the information obtained in this way has aided the manufacturers in improving their product.

Concrete Research

The principal research activity of the Engineering Materials Laboratory has been a continuation of the study of the behaviour of structures in service. The Commission's structures are being very closely watched and any unusual condition observed has been carefully studied. One case of incipient alkali attack was thus detected, and new information on the corrosive action of natural waters has been obtained.

The observations made upon the corrosive action of certain types of waters has shown the need for a determination of the exact chemical characteristics of

the various natural waters that the concrete structures of the Commission have to resist, and work along these lines was undertaken during the year. Weekly samples are being obtained from fifteen different rivers and tested, and at the same time, the closely related problem of the character of the changes brought about in both the concrete and the water when the latter seeps through concrete is being studied.

In addition to the Commission's plants, about seventy-five concrete structures belonging to others have been inspected during the year. Structures were usually inspected in groups, each group being chosen with a view to getting information along certain definite lines. For example, the structures of one district have been carefully examined for evidence of the effect of defective aggregate, those of another for the effect of very pure natural waters, while a third group, which was inspected, consisted entirely of old dams of a certain type. Much valuable information has been secured.

Waterproofing Materials

As mentioned in previous reports, a study has been in progress for two years of the effectiveness of the clear and colourless liquid waterproofing materials used commonly for the purpose of preserving and protecting stone, brick and concrete surfaces. The tests, which are now complete, show that none of the materials tested had any permanent value when applied to concrete surfaces.

Temperature Control in the Field Laboratory

A laboratory for the field testing of concrete is installed on every major concreting operation of the Commission in order to control the quality of the concrete used. One of the difficulties encountered with these laboratories has been to maintain the curing temperature of the concrete specimens between 65° and 70° F. at all times. During the past winter a cheap but efficient system of temperature regulation was worked out and has been in successful use in the field laboratory installed at Queenston for the powerhouse extension now being built. Very close temperature regulation has been obtained with this installation, and it has proved so successful that similar equipment is being installed on the Alexander power development and in the cylinder storage room of the laboratory.

Chemical Laboratory

The Chemical Laboratory cooperates very closely with all other departments of the Laboratories and much of its work arises from investigations originating in these departments. A typical case in point is the study of natural waters referred to previously.

Insulating Oils

One of the important materials used by the Commission in the operation of its electrical equipment is insulating oil. It forms an indispensable part of every transformer and large circuit breaker. It is also one of the most complex of materials and many things about its behaviour in service are but partly understood. In recent years the Commission has taken an active interest in furthering the study of this class of oils. It is represented on several important technical committees studying them and has actively cooperated with the American Society for Testing Materials, the International Electrochemical Commission, and the Canadian Engineering Standards Association in their investigations and standardization work. An extensive series of tests on oils was completed during the past year and reported to the first two of the above organizations. Besides

CHEMICAL LABORATORY

Apparatus for making life tests on paint. Conditions equivalent to noon-day sun alternating with rain are furnished by this machine

these, the laboratory has been studying the behaviour of breaker oils in service and is commencing an investigation of the nature of the gases that form in transformers and breakers under both normal and abnormal conditions of operation.

Scale in Transformers

An interesting problem was presented by a bank of transformers in which the cooling coils became so filled with scale from the cooling water used that they could not be operated. A study was made of the type of scale formed and a method worked out for removing it by forcing a solvent through the pipe. The treatment was entirely successful and made the purchase of new coils unnecessary.

Corrosion of Pipes

A somewhat different problem was successfully solved at another station where the cooling water used was corroding the pipes badly. The cause of this trouble was determined and a remedy developed which has eliminated the trouble.

Paints

The testing of paints is a continuing operation. A certain percentage of all purchases are regularly sampled and checked, and new paints are investigated and classified. In addition, the behaviour of paints actually in service are studied and their performance compared to the laboratory tests already made. In this way the laboratory is able to assist the engineers in deciding the best means and the proper material for protecting the Commission's structures.

One of the difficulties in testing paints is the time required to obtain information as to their weathering properties. It has been found by experience that at least two years' outdoor exposure is required to weed out paints of doubtful quality, and most good paints will be on the test racks from three to five years before failure. Recently an apparatus has been developed which overcomes this difficulty in part. It consists of a slowly revolving cylindrical drum on which the test panels are mounted. In the center of the drum a special arc lamp is hung the light rays of which closely approach the sun's rays in actinic quality. During each revolution the test panels are sprayed for a short time with water. It has been found that paints tested by this machine fail in the same manner as paints in service, and instead of taking several years to bring about failure, as in ordinary exposure testing, failure occurs in from forty to fifty hours or sooner if the paint is of poor quality.

Wood Preservatives

The Commission uses annually many thousands of wooden poles. All of these are subject to decay, and in a number of localities deterioration occurs very rapidly. In spite of the fact that the Commission treats most of its poles, the annual loss from this cause is very great, and ways and means of lessening it through a better treatment of the poles are always being sought. To assist the engineers in solving this problem, a test plot has been installed north of Barrie where pole deterioration has been particularly bad, and 30 pole butts of different kinds of timber treated in various ways have been placed in the ground there. The condition of these poles will be regularly examined and reported upon.

Photographic Branch

This Department has been quite busy all through the year. Many trips have been made to record the activities of the Commission, notably the erection of the new St. Thomas and Port Colborne transmission lines, and the western section of the second Gatineau line. Progress photos have been taken monthly at Queenston on the erection of No. 10 unit, and at Leaside on the installation of the condenser station and the extension to the Leaside station. Trips have also been made to Bracebridge covering work at Hanna Chute and the new plant at Trethewey falls; to Powassan where a record was made on the new Elliott Chute plant, and the Bingham Chute and Nipissing Generation station near there. Photographs covering the installations of "Hydro" in several of the rural power districts have also been taken.

A hand movie camera has been added to the equipment of the section and has been carried on each of the above trips. It is proposed to assemble the pictures taken with it into several groups and to add to them as circumstances permit so that ultimately the Commission will have available moving pictures of all its plants and activities. At Queenston a record of the concrete plant and mixing and delivering methods is being made. Some of the erection methods and difficulties met with on tower line construction have also been covered.

PHOTOGRAPHIC LABORATORY

Apparatus designed in the Photographic Laboratory for developing the long films used in the Klydonograph

The inside activities have also been many and varied covering the developing and finishing of photos taken by the Engineering staff while in the field, copying maps, drawings, blueprints, etc., making lantern slides and enlargements. Developing and finishing the klydonograph records made out on the transmission lines has also involved much work. In connection with the research work of the laboratories, the photographic branch was asked to handle the films from the continuous recording klydonograph which were $81\frac{1}{2}$ feet long. This was successfully accomplished by building a circular rack turned by a hand crank in a special semi-circular tray which contained the developer. A picture of this new equipment is attached.

Approvals Laboratory

Applications for regular approval report and listing to the number of 475 were received during the year, an increase of 45 per cent over the preceding year. Of these applications 26.5 per cent referred to motor-operated appliances, 23.5 per cent to heating appliances, 15.5 per cent to radio and sound-reproducing appliances, 15 per cent to lighting devices, including portable lamps, 10 per cent to wiring devices and 9.5 per cent to sockets, switches, etc. In addition 62 special applications for temporary approval, or limited label service, were received, and 184 applications for listing of equipment approved by Underwriters' Laboratories, an increase of 22 per cent, were also recorded.

Final approval reports to the number of 258, an increase of 57 per cent, were issued in addition to a much larger number of preliminary letter reports. 351 white card summaries of these reports, together with 167 green card reprints of Underwriters' Laboratories listings were printed.

At the close of the year, 273 reports remained incomplete, but all applications with the exception of 24 had already received attention and the submittor had been advised of the results of a preliminary test and examination.

To take care of the large increase in the number of applications received, two engineers have been added to the staff. The clerical work in connection with the re-examination and label service has also increased to such an extent that two more clerks have been taken on together with an additional typist.

The enforcement of regulations regarding the sale of electrical equipment has been assigned to one engineer who is directing the work of prosecution of offenders both in the Toronto district and through the local inspectors in the other inspection districts throughout the Province. About 25 charges have been laid during the year. Convictions were registered in almost every case as no charge was laid until ample opportunity had been given the offender to correct his error in a reasonable time. These cases covered sales of unapproved radio and sound-reproducing equipment, portable lamps, sockets, electric tools, incubators and brooders, flexible tubing, armoured cable and heating appliances. Charges were laid in Toronto, Hamilton, Ottawa, and Kitchener districts with very beneficial results.

Two supplements to the list of approved electrical equipment have been issued during the year, and its distribution throughout Canada and the United States has been considerably extended.

Arrangements were completed with the city electrician of Winnipeg to act as the Commission's representative for Approvals inspection among local manufacturers in that city. Negotiations are also underway for the purpose of appointing an agent for label service in the city of Montreal. Two inspectors from the laboratory are now employed full time on label and re-examination work and a third inspector is giving half of his time to the local work.

Mileage travelled by these inspectors during the year amounted to 16,153, part of this by railway but a large proportion by automobile.

Label users now total more than 225. Sales of labels have increased 75 per cent in value, the larger increases being in portable lamps, signs and service boxes.

ELECTRICAL INSPECTION DIVISION

To comment upon the functions and scope of the Electrical Inspection department would entail the repetition of statements made in recent annual reports. In the Twentieth Annual Report of the Commission (1927), a detailed and comprehensive description of the tests and operations of the department was given.

The Electrical Inspection division, like the Testing division, differs from other departments of the Commission, in that it is not concerned with the sale of power or the rates charged for service. The main function of the department is to enforce the Rules and Regulations governing electrical installation work, which cover not only the mechanical features but the insulation values as well. Thus an inspector must not pass upon nor permit the use of any material, equipment or current-carrying device for connection to any circuit or source of supply coming under the jurisdiction of the Electrical Inspection division that has not been tested and approved by the Testing Laboratories of the Commission. The energies of this division of the department are entirely confined to that field.

The Year's Operations

The principal feature of the year's operation worthy of comment is the volume of business handled, which is largely governed by building activities, type of construction, the extension of rural power lines, and to a variable extent, by the sale of electrical appliances and apparatus, such as ranges, heaters, fuel burners, refrigerators, etc.

A large amount of time is devoted each year to the inspection of electrical installations in older buildings. Defective and obsolete wiring in 5,617 buildings and premises was condemned by the department as constituting a fire and life hazard. These buildings were re-wired, in whole or in part, at a cost estimated at \$410,000.

A brief resume of the year's work shows that the number of paid applications for inspection received was 96,701—an increase of 1,502, or 1.5 per cent over the preceding year. A total of 185,582 inspections were made, being an increase of 5,773, or 3.1 per cent.

Nine fires were reported to have been caused by defective wiring or equipment.

Thirty persons and companies were prosecuted during the past twelve months for various infractions of the Rules and Regulations. Twenty-six convictions were secured and fines ranging from ten to fifty dollars were imposed.

Three persons were electrocuted through coming in contact with live equipment. It is noted, with regret, that two of these deaths were the result of carelessness; one, by using a portable electric heater in a bathroom; the other, through a mistake in making a connection to a 550-volt machine.

The condensed summary, below, is illustrative of the amount of work taken care of during the past ten years:

Year	Permits issued	Inspections made
1920.....	87,399	160,990
1921.....	84,352	160,873
1922.....	90,932	182,522
1923.....	90,000	180,000
1924.....	90,497	176,108
1925.....	98,419	173,418
1926.....	92,725	174,979
1927.....	89,425	169,098
1928.....	95,199	183,724
1929.....	96,701	185,582
Totals.....	916,649	1,747,294

Canadian Electrical Code

Mention has been made in previous reports of the part played by the Commission in the preparation of the Canadian Electrical Code, the first edition of which was published in 1927 and adopted by the Commission in 1928. The operation of this Code in Ontario has been eminently satisfactory. A second edition has been prepared and is now in the press. This embodies changes made necessary by advances in the art and by the experience of inspectors throughout the Dominion since the first edition was published. It is expected that the new edition will be adopted in 1930.

SECTION VIII

ELECTRIC RAILWAYS

ESSEX DISTRICT RAILWAYS

Way and Structures

The single-track extension of the Parent Avenue route on Tecumseh road, Walkerville, mentioned in last year's annual report, was constructed and was placed in operation on February 14, 1929. This extension, from the westerly limits of Walkerville to Walker road is 2,300 feet long and is placed off centre, in the double-track unpaved reservation provided in the centre of the street. The construction is of the open type except at street intersections, at which points the track is paved with granite blocks on concrete paving base. Tubular steel poles for ornamental street lighting and railway overhead construction were erected on this extension and arrangements made whereby the cost of the pole lines was borne equally by the municipality and the railway.

In addition to the normal maintenance work required on the system, reconstruction work of a major character was carried out on London street and Sandwich street west in Windsor and on Sandwich street in the town of Sandwich. The bridge over Turkey creek was also reconstructed during the year.

On London street in Windsor the reconstruction work was performed in conjunction with the city's street widening scheme. The reconstruction programme involves the complete reconstruction of the paved double track from Ouellette avenue to Salter avenue, a distance of 2,600 feet, the partial reconstruction from Salter avenue to Elm avenue, a distance of 900 feet, and the complete reconstruction between the M.C.R. bridge and the west city limits, a distance of 2,100 feet. Also involved was the moving of the existing steel-pole lines from Bruce avenue to the west city limits, this latter work being done at the expense of the municipality. It was, however, found impossible to complete the reconstruction programme during 1929 owing to the fact that the city's plans for widening London street east of Janette street were not completed. That portion of the work therefore, between Janette street and Ouellette avenue for a distance of 1,900 feet, still remains to be completed, and it is expected that this work will be done during the ensuing year. Where complete reconstruction

was necessary, standard paved double track was installed, consisting of 100-pound A.R.A.-A. rail on international twin steel ties, with concrete ballast and pavement. Partial reconstruction between Salter avenue and Elm avenue consisted of the replacement of the 85-pound C.P.R. rail and asphalt block pavement, with 100-pound A.R.A.-A. rail on steel tie plates, and granite block pavement, the existing wood ties and concrete base being utilized. Joints were thermit welded throughout.

On Sandwich street west in Windsor, the bridge over the Canadian Pacific Railway was reconstructed by that company, necessitating reconstruction of the street railway paved single track in a slightly different location for a distance of 500 feet. As the single track which was replaced was in a wornout condition, arrangements were made with the Canadian Pacific Railway, providing for the work being done by the Commission's forces, the Commission supplying the necessary steel rails and steel ties in place at its own expense, all other costs in connection with the work being borne by the railway company.

The pile trestle over Turkey creek having reached such a condition that further repairs were not considered economical, complete reconstruction was made. The new trestle consists of eight, four-pile bents with timber deck.

On Sandwich street in the town of Sandwich, double-track construction is proceeding in the centre of the street between Rosedale avenue and Detroit streets, for a distance of approximately one-quarter mile. The double track between these two streets was formerly situated on private right-of-way at the south side of the street and as the track at each end swung across the pavement to regain the centre of the street a somewhat hazardous condition existed. Arrangements have been made with the municipality providing for the new track construction to be in the centre of the street, the municipality purchasing the private right-of-way for street widening purposes. The municipality has also agreed to bear the cost of pavement on the new track allowance. Tubular steel poles for the joint use of the municipality and the railway for lighting and railway overhead are also being erected. It is expected that the work will be completed and placed in operation before the end of the calendar year 1929.

An addition to the car yard property was made by the purchase of the Fleming property fronting on Sandwich street in Windsor. The car house property now extends from London street on the south to Sandwich street on the north, with a frontage of 237 feet on the former street, and 120 feet on the latter, the total length between the two streets being 1,062 feet.

Equipment

The railway equipment was well maintained, no new equipment being added.

Operation

The gross revenue for the year 1929 amounted to \$1,241,042 as compared with \$1,158,710 for 1928, an increase of \$82,331.

The net operating revenue for the year 1929 was \$305,962 as compared with a net in 1928 of \$274,377, an increase of \$31,585. The interest and taxes for

the year 1929 amounted to \$266,881 as compared with \$260,272 for the year 1928, an increase in fixed charges of \$6,609.

The improvement in passenger business noted towards the close of 1928 continued for the first six months of 1929, each month showing an increase in revenue passengers carried as compared with the corresponding period for the previous year. The increase in passenger earnings was increased in a greater proportion due to the higher rate of fare for the first six months of 1929 as compared with 1928. For the last six months the rate of fare is the same for both years, but during this period the number of revenue passengers carried in 1929 showed a considerable decrease from the 1928 figures with a corresponding decrease in earnings. From November 1 to April 30, revenue passengers increased 355,678 over 1928 and from May 1 to October 31 decreased 586,789, a net decrease for the year of 231,111.

The industrial depression in the Border Cities resulting from the partial or total closing of automotive factories and allied industries in the early summer of 1929 is responsible for the falling off in passenger earnings. The Chamber of Commerce report of automobile workers employed in September was 7,934 as compared with 14,280 in April, and it was noted that many of these were working part time only.

The College Avenue line was placed in operation in December, 1927, and carried 451,177 revenue passengers, replacing bus service to a considerable extent. Bus revenue passengers were 348,907 less than in 1928. The Parent Avenue extension was put in operation in February and this line carried 560,171 more fare passengers than in 1928. All other city car lines except Seminole (29,400 increase) showed decreases. The Howard Avenue bus line carried 262,093 passengers more than in 1928.

There was a reduction in freight tonnage from 19,183 tons in 1928 to 12,540 tons in 1929, due to the curtailment of shipments to the export docks. This was offset by a substantial increase in car rentals.

The net result of the year's operations shows a surplus of \$44,471 after paying interest and taxes but without taking care of depreciation, as compared with \$14,095 in 1928. Passenger revenue increased \$76,262 and freight revenue increased \$3,249 over 1928. Gross revenue increased \$82,331.

Arrangements are being made to operate a bus service over the Ambassador bridge early in November.

The financial statements respecting the railway are given in Section IX of this report. The accompanying chart indicates the growth of the railway for the past five years.

The mileage operated by the various types of cars and buses during the year is as follows: single-truck, hand-brakes, two-man cars, 5,009 car-miles; double-truck, air-brakes, two-man cars 244,113 car-miles; interurban cars, 516,849 car-miles; single-truck, safety cars, 735,945 car-miles; double-truck, safety cars, 1,347,437 car-miles; express cars, 18,182 car-miles; buses, 507,887 bus-miles; service cars, 22,269 car-miles; total, 3,397,691 car- and bus-miles.

WINDSOR, ESSEX & LAKE SHORE RAPID RAILWAY

On the 8th of September, 1929, the operation of the Windsor, Essex and Lake Shore Rapid Railway was taken over by the Commission under agreement with the Windsor, Essex and Lake Shore Electric Railway Association, the latter body, representing a number of municipalities traversed by the railway, having purchased the line from the original owners, the Windsor, Essex and Lake Shore Rapid Railway Company, at a cost of \$296,000.

Way and Structures

This railway consists of 36.12 miles of standard gauge single track extending from the intersection of Pitt street and Ouellette avenue in downtown Windsor to Leamington, with numerous industrial sidings along the route. In Windsor, Essex, Cottam, Kingsville and Leamington the track is situated in the centre of the street, while on the balance of the line it is constructed on a narrow strip of private right-of-way of varying widths, adjacent to the highway.

The main line track in Windsor, Essex, Kingsville and Leamington is paved, chiefly with vitrified brick, the balance is of the open type of construction. The rail is mainly 80-pound A.S.C.E. section, in 33-foot lengths. Approximately 7,000 pairs of two-hole angle bars have been used. Ties are of hardwood in paved construction and of cedar and jackpine in the open construction.

The overhead system of cross-span construction in Windsor is chiefly carried on steel poles. On the balance of the line, 30 to 35-foot cedar poles have been used, with iron brackets supporting catenary construction except in Essex, Cottam, Kingsville and Leamington, where cross-span construction is in use. The 10-point catenary construction consists of 7/16 steel-stranded messenger wire supporting a 3/0 grooved copper trolley wire.

WINDSOR, ESSEX & LAKE SHORE RAPID RAILWAY
 Bathing Beach and Dressing Rooms at Point Pelee Park

WINDSOR, ESSEX & LAKE SHORE RAPID RAILWAY

A combined car house and freight shed of solid brick construction is situated on Arthur street in Windsor. In Kingsville there is a small car house of solid brick construction, also a garage of corrugated iron construction. The head office and the freight shed is also located at Kingsville. In addition there are a number of small stations, shelters and miscellaneous buildings including a combined station and freight shed at Essex.

Equipment

The car equipment consists of seven motor passenger cars, four trail cars, four Godfredson buses, three express cars, one snow plow, two box cars, four gondola freight cars and five flat cars.

Power

The steam power house for the system is situated on Park street in Kingsville and consists of a solid brick building with boiler house of concrete block.

Steam is generated in four 360-h.p. water-tube boilers. Electrical power is generated by two cross-compound horizontal slow-speed engines each direct connected to a 500-kw. Westinghouse single-phase 6,600-volt generator.

Rehabilitation

The railway system, in all its branches, has been poorly maintained and extensive rehabilitation is necessary throughout. The rehabilitation programme which has been approved by the Windsor, Essex and Lake Shore Electric Railway Association under the terms of its agreement with the Commission is outlined below, the estimated cost being \$674,000. This amount, together with the purchase cost of \$296,000 and expenses in connection with acquisition and financing will place the capital cost at \$1,000,000.

Way and Structures:

Reconstructing roadbed, including drainage, ballasting, retieing, replating joints and bonding.....	\$238,000	
Construction of new sidings.....	20,000	
New overhead and feeder system.....	140,000	
Telephone and signal system.....	21,000	
Track extension in Leamington.....	20,000	
New freight shed at Leamington and repairs to station buildings....	5,000	
		<u>\$444,000</u>

Equipment:

5 new cars (4 motor, and 1 trail).....	\$112,000	
2 locomotives.....	18,000	
3 rebuilt city cars.....	20,000	
Repairs to buses.....	5,000	
Total equipment.....		155,000

Power:

Construction of new substations.....		75,000
Grand total.....		<u>\$674,000</u>

Way and Structures

The work contemplated under this heading includes the partial reconstruction of approximately one mile of paved single track in Windsor and all of the paved track in Essex and Cottam. On the balance of the line, where open track exists, it is proposed to install 60,000 cedar ties, 7,000 four-hole angle bars to replace the existing two-hole bars now in use, and 13,000 bonds. It is also proposed to reballast a major portion of the line, repair small bridges and culverts and renew defective special work.

In order to provide passing points for the improved service to be inaugurated, provision has been made for the construction of new passing sidings.

Reconstruction of the overhead system includes the replacement of the majority of the wood poles, erection of new catenary construction throughout consisting of 7/16 steel-strand messenger and 4/0 grooved copper contact wire supported on existing mast arms, and the installation of an adequate feeder system.

Provision is made for the installation of new telephone and signal system throughout.

In Leamington an extension of approximately 4,000 feet of track is contemplated to accommodate summer traffic to Seacliff park and allowance is made for the construction of a new freight shed to take care of the increased business which is offered.

Rehabilitation work as outlined above is proceeding as rapidly as possible and the various materials necessary are being assembled. Due to the lateness of the season, the market for cedar ties is limited, but it is expected that half of the number required will be installed before the advent of severe weather. The partial reconstruction of the paved track in Windsor is practically completed, 15,000 cedar ties have been installed on the open track and 5,000 yards of ballast have been placed in the track to date. The freight shed at Leamington has been completed and is now in use.

GUELPH DISTRICT RAILWAYS

Way and Structures

The construction of a short spur to the Guelph Stove Company's plant on York road constituted the only track extension during the year. This spur was built under the terms of the Standard Siding agreement, the Stove Company assuming the perishable cost and paying a 6 per cent. per annum rental on the non-perishable cost. It is expected that considerable business will accrue to the railway as a result of this construction, the Stove Company having recently completed a large addition to its plant.

In addition to the general maintenance work performed throughout the year, major repairs were executed on the paved single track on Gordon street and the single track on Ontario street was partially rebuilt.

On Gordon street, 2,000 feet of paved single track extending from Waterloo avenue on the north to a point near the Speed River crossing on the south was repaired by removing the existing continuous joints and welding the rails together by means of the Thermit process.

On Ontario street from Neeve street to the C.P.R. diamond crossing, a distance of approximately one-half mile, major repairs were necessary. This single track is located in the centre of the street between two strips of concrete pavement. It consists of 60-pound rail on wood ties with gravel ballast and pavement. The light rail over which passed the heavy freight cars from the C.P.R. interchange was worn out, and was replaced with 80-pound A.S.C.E. rail. Ties were renewed where necessary and the gravel ballast and pavement replaced, the paving surface being treated with asphaltic oil and stone screenings.

The track on the Suffolk route is in poor condition. This route has been the subject of negotiations with the city during the year and estimates have been submitted showing the comparative costs of track renewal with continued street car operation, and bus operations, which latter substitute has been suggested. Negotiations in this connection are proceeding.

Operation

The operating revenue for the Guelph District Railways for 1929 was \$88,145 as compared with \$91,242 in 1928. The total operating expenses for the year 1929 were \$80,132, as compared with \$75,902 in 1928. Taxes for the year 1929 amounted to \$1,348 as compared with \$2,699 in 1928. The net operating revenue for the year 1929 amounted to \$8,014 as compared with \$15,340 in 1928. The interest and debenture payments were \$26,215 as compared with \$26,434 in 1928. The renewal set aside was \$10,252 as compared with \$10,275 in 1928. The deficit for the year 1929 amounted to \$29,802 as compared with \$24,068 in 1928.

Included in the above deficit is \$6,989 which has been set aside each year for amortizing the original value of the railway line previous to the transfer of this line to the Hydro-Electric Power Commission; and also an interest charge of \$4,711; renewal account for the year of \$10,252.

GUELPH DISTRICT RAILWAYS—OPERATING STATISTICS

SECTION IX

FINANCIAL STATEMENTS

Relating to Properties Operated by The Hydro-Electric Power Commission on Behalf of Municipalities

The following explanatory statement is submitted with a view to affording a satisfactory understanding of the manner in which the various operations of the Hydro-Electric Power Commission of Ontario are conducted and financed and thus contributing to the interest of those concerned either directly or indirectly with the work of the Commission.

The "Hydro" electrical undertaking of Ontario is an organization of a large number of partner municipalities co-ordinated into groups or systems for securing common action with respect to power supplies, through the medium of the Hydro-Electric Power Commission which under the Power Commission Act functions as their trustee. The undertaking as a whole, embracing all the operations from the provision of the power down to its final delivery to the ultimate consumer, involves two distinct phases of operations.

The FIRST phase of operations is the provision of the electrical power—either by generation or purchase—and its transformation, transmission and delivery in *wholesale* quantities to individual municipal utilities, to large industrial consumers, and to rural power districts. This phase of the operations is performed by the Hydro-Electric Power Commission of Ontario as trustee for the municipalities acting collectively in groups or "systems," and the financial statements relating to these collective activities of the municipalities are presented in this section of the Annual Report.

The SECOND phase of operations is the *retail* distribution of electrical energy to consumers within the limits of the areas served by the various municipal utilities and rural power districts. In the case of rural power districts, which usually embrace within their confines portions of more than one township, the Hydro-Electric Power Commission not only provides the power at wholesale, but also—on behalf of the respective individual townships—attends to all physical and financial operations connected with the distribution of energy at retail to the consumers within the rural power districts.* The financial statements relating to the rural power districts are also presented in this section of the report. In the case of cities, towns, many villages and certain thickly populated areas of townships, retail distribution of electrical energy provided by the Commission is in general conducted by individual local municipal utility commissions under the general supervision of the Hydro-Electric Power Commission of Ontario. The balance sheets, operating reports and statistical data relating to such individual electrical utilities are presented in Section X of this report.

*For further information respecting rural power districts consult latter portion of Section III in this Report.

Having the foregoing distinctions respecting wholesale and retail electrical service in mind, the following brief notes will assist to an understanding of the economic structure and of the general plan of administration of the undertaking, and will make clearer the financial tables herein presented. The basic principle governing the financial operations of the undertaking is that electrical service be given by the Commission to the municipalities and by the municipalities to the ultimate consumers at cost.

The charges for power supplied by the Commission to the various municipalities vary with the amounts of power used, the distances from the sources of supply and other factors. The entire capital cost of the various power developments and transmission systems is annually allocated to the connected municipalities and other wholesale power consumers, according to the relative use made of the lines and equipment. Each municipality assumes responsibility for that portion of property employed in providing and transmitting power for its use, together with such expenses—including the cost of purchased power if any—as are incidental to the provision and delivery of its wholesale power. The entire annual expenses,—including appropriations for reserves,—incurred by the Commission in the supply of power at wholesale are thus paid out of revenues collected in respect of such power, through the medium of power bills rendered by the Commission. The municipalities are billed at an estimated interim rate each month during the year and credit or debit adjustment is made at the end of the year,* when the Commission's books are closed and the actual cost payable by each municipality for power received has been determined.

Included in the municipality's remittance to the Commission for the wholesale cost of power—besides such direct expenses as those for operation and maintenance of plant, for administration, and for interest on capital—are sums required to build up reserves for sinking fund, for renewals, and for obsolescence and contingencies. The first-mentioned reserve is for the purpose of liquidating the capital liabilities; consequently, as capital obligations are discharged the plant will progressively be freed from interest expense. The other reasons are, respectively, being created to provide funds for the replacing or rebuilding of plant as it wears out; to enable the undertaking to replace existing equipment with improved equipment as it becomes available through advances in science and invention, and to meet unforeseen expenses which from time to time may arise.

The ultimate source of all revenue to meet costs—whether for the larger operations of the Hydro-Electric Power Commission or for the smaller local operations of the municipalities—is, of course, the consumer. Out of the total revenue collected by each municipal utility from its consumers for service supplied, only an amount sufficient to pay the wholesale cost of power supplied by the Commission as outlined above is remitted to the Commission; the balance of municipal electrical revenue is retained to pay for the expense incurred by the local utility in distributing the electrical energy to its consumers.

The results obtained by the annual adjustments of the Commission's capital investment, operating expenses and fixed charges, as they affect individual municipalities are shown in the tables for the respective systems. For the purpose of financial statement, the various systems are treated as separate units and for

*The financial year for the Commission ends on October 31. The financial year for the municipal electric utilities, however, ends on December 31, and the municipal accounts are made up to this date, and so recorded in Section X.

each of them similar statements and details are presented. Many of the pages which follow, therefore, simply repeat for each system data similar to those which are presented for the first system dealt with in each division of the report, namely, the Niagara system. In order, therefore, to possess a ready grasp of all the figures presented in this and other similar reports of the Commission, all that is necessary is to have a true understanding of the financial procedure followed in connection with one system and with one municipal "Hydro" utility.

The accounts of the Hydro-Electric Power Commission of Ontario are verified by auditors specially appointed by the Provincial Government. The accounts of the "Hydro" utility of each individual municipality are prepared according to approved and standard practice and are also duly audited.

Tabular Data

The first tabular statement given in Section IX is a general balance sheet exhibiting the assets and liabilities of the undertakings relating to the properties constructed or otherwise acquired and being operated by the Commission as trustee for the municipalities of the various systems.

The general balance sheet is followed by groups of statements relating in turn to each system of the Commission. These statements, for each system, are similar in character and include:—

Operating Account for the year, showing, for the system as a whole, the various items of operating expense and fixed charges entering into the cost of power as defined by the Power Commission Act, and the revenues collected by the Commission from the partner municipalities and other consumers.

Cost of Power statement, which shows the apportionment to each municipality or rural power district of the items of cost summarized in the Operating Account, as well as the apportionment of the capital expenditures listed in the balance sheet and the amount of power taken by each municipality. It should be appreciated that the cost of power given in this table is the wholesale cost,—that is, the cost which the Commission receives for the power delivered from the main transformer stations serving the local utility or rural power district. In the case of rural power districts, the costs of power for the respective districts appear also in the "Rural Operating" statement, immediately following, as "Cost of power delivered"; in the case of municipal electrical utilities not directly administered by the Commission, the respective costs of power appear in Statement "B" of Section X as "Power purchased."*

Rural Operating statement, which shows for each rural power district the various items of cost, and the revenues received, in connection with the distribution of electrical energy to consumers.

Credit or Charge statement which shows the adjustments made in order to bring the amounts paid by each municipal electric utility to the actual cost of service to that municipality. These credits and charges are taken up and given effect to in the municipal accounts of "Hydro" utilities before the operating records of each year are closed.

Reserve for Renewals which shows the provisions made for, the expenditures from, and the balances to the credit of, this fund.

Reserve for Obsolescence and Contingencies which gives similar information with respect to this reserve.

*Consult footnote on previous page.

Sinking Fund statement which gives the accumulated total of the amounts paid by each municipality and rural power district as part of the cost of power together with its proportionate share of other sinking funds.

Sinking Fund Reserve which summarizes the provisions made with respect to this fund.

Section IX also contains operating accounts of the various electric railways operated by the Commission, and a summary of the "Appropriations, Advances and Capital Expenditures" made during the year.

All municipal "Hydro" utilities have current expenses to meet similar to the expenses of the Commission and have adopted the same financial procedure with respect to their operations. In other words, concurrently with the creation of funds to liquidate their debt to the Commission and to provide the necessary reserves to protect generating, transforming, and transmission systems, the municipalities are taking similar action with respect to their local "Hydro" utility systems.

The balance sheets, operating reports and statistical data appearing in Section X, under the heading of "Municipal Accounts," relate to the operation of local distribution systems by individual municipalities which have contracted with the Commission for their supply of electrical energy. To this section there is an explanatory introduction to which the reader is specially referred.

To illustrate further the foregoing explanatory comments, there is presented herewith a typical operating statement of an Ontario municipal electrical utility, covering its financial operations, both as a partner in a system of the Hydro-Electric Power Commission, and as administrator of its own local distribution system.

WINDSOR "HYDRO" UTILITY

OPERATING STATEMENT FOR THE YEAR 1929

REVENUE

Revenue from Windsor "Hydro" customers for year \$1,158,005. 38

EXPENSES

Representative illustration of expenses incurred by the Hydro-Electric Power Commission on behalf of a municipality in connection with the supplying of its electrical energy. These data really show—as determined by annual adjustment—what it costs the Commission to supply the municipality with its power. See "Cost of Power" statement, page 150, for the city of Windsor, as follows:

Cost (proportionate share) of operation and maintenance expense of Niagara generating plants, transformer stations and transmission lines together with administrative expenses	\$191,444.76
Interest on Windsor's proportionate share of capital investment in generating plants, transformer stations and transmission lines	266,374.63
Sinking Fund (proportionate share) provided in respect of generating plants, transformer stations and transmission lines	57,793.38

Renewal reserve (proportionate share) provided in respect of generating plants, transformer stations and transmission lines	\$37,919.59
Obsolescence and contingencies reserve (proportionate share) provided in respect of generating plants, transformer stations and transmission lines—a reserve created to meet any unforeseen contingency or obsolescence expense	101,243.73
	—————\$654,776.09
<i>Expenses incurred by a municipality through its utility commission in connection with the sale of electrical energy to consumers. Consult the section dealing with the Municipal Accounts:</i>	
Operation, maintenance and administrative expenses	\$214,494.06
Interest and fixed charges on debenture debt	144,034.30
Depreciation charge	52,770.00
	—————\$411,298.36
Total expenses charged against revenue from customers of the Windsor system	\$1,066,074.45
	—————
Net surplus for the year	\$91,930.93

The municipality of Windsor, situated at the extreme end of the Niagara system, 250 miles distant from the source of power, Niagara Falls, Ontario, was connected to the system in October, 1914. This Hydro utility complied with every monetary obligation imposed upon it by the Power Commission Act. With the close of the fifteenth year of operation, this utility's total assets are \$4,441,447.14; liabilities, \$2,369,882.51, and reserves and surplus \$2,071,564.63, as shown in the municipalities' balance sheets, in Section X, Statement "A".

By reference to this municipality's balance sheet, it will be noted that the Windsor "Hydro" utility has created a sinking fund equity amounting to \$631,682.98 in the Hydro-Electric Power Commission System.

By reference to Statement "D" in Section X of this report it will be seen that under the low rate schedules prevailing throughout the Province, the rates in force in Windsor, have resulted in *average costs** to the various classes of service as follows: Domestic service (with an average monthly consumption per consumer of 192 kilowatt-hours) 1.6 cents per kilowatt-hour; commercial service 1.8 cents per kilowatt-hour; power service \$23.90 per horsepower per year. The actual *rates in force* are presented in Statement "E" and particulars of street lighting service are given in Statement "C".

*If proper differentiation be made by those undertaking research, between the very different entities of *rates* on the one hand and the derived quantities of *average costs or revenues* on the other, a great deal of confusion and misrepresentation will be avoided. Consult introduction to Statement "D" of Section X.

UNDERTAKINGS

In respect of the Sandwich, Windsor and Amherstburg Railway:
Debentures issued by the Commission and guaranteed by the
Province of Ontario:

Four and one-half percent debentures, due
1960, issued in purchase of the railway \$2,039,000.00

Four and one-half percent debentures, due
1960, issued for the purpose of making
extensions and betterments 61,000.00

Six percent debentures, due 1961, issued for
the purpose of making extensions and bet-
terments 900,000.00

Five percent debentures, due 1943, issued for
purpose of making extensions and better-
ments 966,205.00

Five percent debentures, due 1945, issued for
the purpose of making extensions and better-
ments 750,000.00

Five percent debentures, due 1945, issued for
the purpose of making extensions and bet-
terments 100,000.00

Five percent debentures, due 1946, issued for
the purpose of making extensions and bet-
terments 600,000.00

(Note: Further bonds to the amount of \$400,-
000 stood guaranteed by the Province of
Ontario as at October 31, 1929—such bonds
had not been executed or issued by the
Commission. These bonds are held for
future commitments in connection with con-
struction programmes already approved and
now in progress.)

\$5,416,205.00

Interest accrued thereon 56,125.00

\$5,472,330.00

Accounts payable and accrued charges \$7,314.59

Provision for unredeemed tickets 12,000.00

Deposit to cover cost of industrial spur 2,000.72

21,315.31

Carried forward \$5,493,645.37 \$250,661,507.99

Note: The cash paid over by the Province to the Commission up to October 31, 1929, on account of authorized grants to rural power districts—as above set out—amounts to \$4,687,645.10. The Grants payable by the Province—as above set out—in respect of rural power districts as at October 31, 1929, amount in the aggregate to 4,636,194.86

A balance of \$51,450.24 which balance represents:

- (a) Grant funds in the hands of the Commission at October 31, 1929, not allocated but to apply against the construction of authorized rural power districts and extension to existing districts. \$45,983.43
- (a) Grant funds in the hands of the Commission at October 31, 1929, to apply against the construction of, or extensions to existing lines in certain rural power districts. 8,700.83

Less: (b) Grants (or balances thereof) payable by the Province to the Commission in respect of certain rural power districts completed or under construction. 54,684.26
3,234.02

51,450.24

SECTION X

MUNICIPAL ACCOUNTS

And Statistical Data Relating to Hydro-Electric Distribution Systems Operated by Individual Municipalities Served by The Hydro-Electric Power Commission

The Municipal Accounts section of this report presents in summary, and individually, the results of the operation of the local electrical utilities in municipalities owning their own distributing system and operating with energy supplied by or through the Hydro-Electric Power Commission.

Financial statements prepared from the books of these "Hydro" utilities are submitted herein to show how each has operated during the past year, and the financial status at the present time. Other tables give much useful statistical information respecting average costs for the various classes of service and the rates in force.

The books of account of the local electrical utilities in all municipalities which have contracted with the Hydro-Electric Power Commission of Ontario for a supply of power are kept in accordance with a uniform accounting system designed by the Commission. During the year 1929, the uniform accounting system was installed in the following municipalities as each became ready for the service: Athens, Belleville, Oshawa and Trafalgar Township Zone No. 2.

Periodical inspections are made of the books of all "Hydro" electrical utilities and local officials are assisted in the improvement of their office routine with a view to standardizing, as far as possible, the methods employed. In the majority of the smaller municipalities, much of the bookkeeping for the electrical utilities is performed by representatives of the Municipal Audit department of the Commission, in order to insure the employment of proper classifications of revenue and expenditures, to save time in preparation of reports, to insure compliance with all the requirements of the standard accounting system, and to make certain that the accounts represent as truly as possible the actual operating results for the year.

The first financial statement in this section presents consolidated balance sheets for each year since 1912, and thus shows the march of progress. It combines the balance sheets of the local municipal utilities of all the systems. It is worth noting that the total plant value has increased from \$10,081,469.16 in 1913 to \$75,340,348.08 in 1929, and the total assets from \$11,907,826.86 to

\$106,909,146.26. The liabilities have not increased in the same proportion as the assets, rising from \$10,468,351.79 to \$48,095,707.63. The reason for this is that much of the cost of the increasing plant value has been financed out of surplus and reserve accounts without increasing the liabilities of the various systems. By this procedure the funds of the systems are used to best advantage. Examination of the results will also show that there is a steady decline in the percentage of net liabilities to total assets; being from 88.0 per cent. in 1913 to 47.8 per cent. in 1929. The equity in the Hydro-Electric Power Commission system automatically acquired through the inclusion of sinking fund as part of the cost of power is not taken into account in arriving at these percentages.

The second financial statement presents consolidated operating reports for each year since "Hydro" service was inaugurated and combines the results from the local municipal utilities of all the systems. Study of this statement will show that the revenue has been increasing satisfactorily. The combined annual surplus, after providing for every cost of operation and fixed charges, including an adequate depreciation charge, amounted in 1929 to \$2,401,375.96.

The five statements, "A" to "E," following the two consolidated reports show the financial status of each municipal system and the results of operations, and also give information respecting revenue, number of consumers and consumption; cost of power to municipalities; power and lighting rates charged to consumers, etc. In the statements "A" and "B," the municipalities are arranged in groups under each system and alphabetically for the municipalities in each system; in statement "D" the municipalities are arranged in three groups—cities, towns and small municipalities; in statements "C" and "E" all municipalities are arranged alphabetically.

Statement "A" shows balance sheets for each municipality with the plant value subdivided into the general natural subdivisions specified in the standard accounting system, and there are also shown the other items which make up the total assets. It is to be noted that among the assets there are items entitled "equity in Hydro system." These items represent the amount of accumulated sinking fund paid by the various municipalities through the medium of "power cost" toward the ultimate retirement of the capital invested by the Hydro-Electric Power Commission on behalf of the partner municipalities. The total accumulation to the end of 1929 is shown on the consolidated balance sheet to be \$14,754,865.40.

During the year rebates were made in many municipalities in respect to surpluses standing to the credit of municipal street light and waterworks services, and to individual consumers, of amounts varying from one-sixth to one-fourth of the previous year's revenue. These rebates amounted in round figures to approximately \$340,000 and affected the cash balance and surplus in the current balance sheet accordingly, notwithstanding which material increases will be noted in both accounts when compared with the 1928 figures.

In each case the balance sheet is complete and final, including either in "accounts receivable," or "accounts payable," the adjustments with the Hydro-Electric Power Commission of the differences between the estimated and the actual costs of power to the municipality.

The liabilities of each local system are set out under their general subdivisions,—debenture balance, accounts payable, bank overdraft, and other

liabilities; this last account including local debentures issued by municipalities to finance ornamental street-lighting systems as local improvements.

The reserves for depreciation, and the acquired equity in the Hydro-Electric Power Commission system, are also listed separately and totalled; and under the heading "surplus" are included not only the free operating profit but the accumulation of sinking fund applicable to debenture debt and also the amount of debentures already retired out of revenue.

The "depreciation reserve" now amounts to 18.38 per cent. of the total depreciable plant, while the "depreciation reserve" and "surplus" combined have already reached the sum of \$42,621,201.97, approximating 56.57 per cent. of the total plant cost.

Statement "B" shows detailed operating reports for each municipal electrical utility. It gives annual revenues from the various classes of consumers; the items of expenditure which make up the total annual expenditure; the amount of the annual surpluses and the sums set aside for depreciation. The population served by each local utility, and the number of consumers of each class, are also shown.

The item "power purchased" includes the annual adjustment made by the Commission, and hence shows for the calendar year the actual cost to the municipal electrical utility and not the cost at the interim billed rates.

Of the 259 municipal electrical utilities included in this statement, 234 had revenue from consumers sufficient to meet all operating expenses and fixed charges and to yield an aggregate operating surplus of \$2,420,741.67, for the year; 15 were able to defray all operating and fixed charges except depreciation, but failed to set aside the full theoretical amounts for that reserve by \$10,306.13; only 10 had gross deficits in respect of operating expenses and fixed charges other than depreciation, aggregating \$5,196.58. The net surplus for all "Hydro" utilities was \$2,401,375.96 for the year.

Statement "C" shows the installation of street lights in each municipality together with the rates set by this Commission, the revenue for 1929, and the cost per capita in each municipality.

Statement "D" presents statistics relating to the supply of electrical energy to consumers in Ontario municipalities served by the Commission. It shows the revenue, kilowatt-hour consumption, number of consumers, average monthly consumption, average monthly bill and the net average cost per kilowatt-hour both for domestic and for commercial light service in each municipality. For power service this statement shows the revenue, the number of consumers, the average horsepower supplied by the municipal utility* and the average cost per horsepower per year. For further reference to this informative statement, consult the special introduction to it on page 000.

Statement "E" presents the cost per horsepower of the power provided for and delivered to the municipalities by the Commission, and the local rates to consumers in force in the respective municipalities, during the year 1929, for domestic service, for commercial light service and for power service.

*The statistics include retail power only. Wholesale industrial power as supplied by the Commission direct, is reported in Section IX.

STATEMENT "D"

Statistics Relating to the Supply of Electrical Energy to Consumers in Ontario Municipalities Served by The Hydro-Electric Power Commission

The following tabulation of various statistical data relating to the supply of electrical energy to consumers by individual municipalities receiving power at cost from the Commission sets forth, regarding the results of operation from the standpoint of the consumers, much useful and interesting information.

The policy and practice of the Commission has been, and is, to make as widespread and beneficial a distribution of electrical energy as possible, and to extend to every community that can economically be reached by transmission lines, the benefit of electrical service. Even where, in certain localities, by reason of the distance from a source of supply or of the smallness of the quantity of power required by the municipality, the cost per horsepower to the municipality—and, consequently, the cost of service to the consumer—must unavoidably be higher than in more favourably situated communities, service has not been withheld when the consumers were able and willing to pay the cost.

The accompanying diagram summarizes graphically certain data of Statement "D," respecting the average cost to the consumer per kilowatt-hour in the cases of domestic service and commercial light service and per horsepower in the case of power service. It will be observed that the total amount of the energy sold in municipalities where circumstances necessitate rates which result in the higher average costs to the consumer is relatively insignificant. With respect to power service, it should be noted that the statistics of Statement "D," and of the diagram, cover mainly retail power service supplied to the smaller industrial consumers. The average amount of power taken by the industrial consumers served by the municipalities is about 40 horsepower. The Commission serves certain large power consumers direct on behalf of the various systems of municipalities.

It should be kept in mind that the revenues reported in Statement "D," and used for purposes of calculating the net cost to the consumer per kilowatt-hour or per horsepower, are the total revenues contributed by the consumers, and include, in addition to the cost of power, sums specifically applicable to the retirement of capital, and also operating surplus which is in part applied to retirement of capital or extension of plant and is in part returned in cash to the consumers.

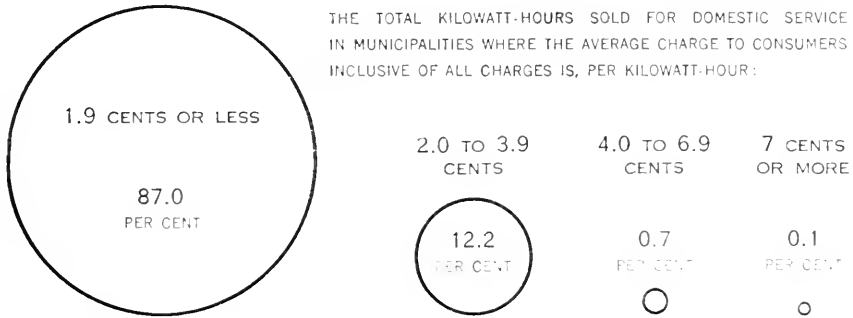

It should specially be noted that the average cost per kilowatt-hour or per horsepower if employed indiscriminately as a criterion by means of which to compare the rates or prices for electrical service in various municipalities, will give very misleading results. The average costs per kilowatt-hour and per horsepower, as given in Statement "D" for the respective classes of service in each municipality, are simply the statistical results obtained by dividing the respective revenues by the aggregate kilowatt-hours or horsepower sold. As such, the data reflect the combined influence of a number of factors, of which the rates or prices to consumers are but one factor. Owing to the varying influence of factors other than the rates, it is seldom found that in any two municipalities the average cost per kilowatt-hour or per horsepower to the consumers, even of the same classification, is in proportion to the respective rates for service. Instances even occur where the average costs to the consumers per kilowatt-hour or per horsepower are substantially lower in one municipality than in another, though the rates are higher.

COST OF ELECTRICAL SERVICE

**IN MUNICIPALITIES SERVED BY THE
HYDRO-ELECTRIC POWER COMMISSION OF ONTARIO**

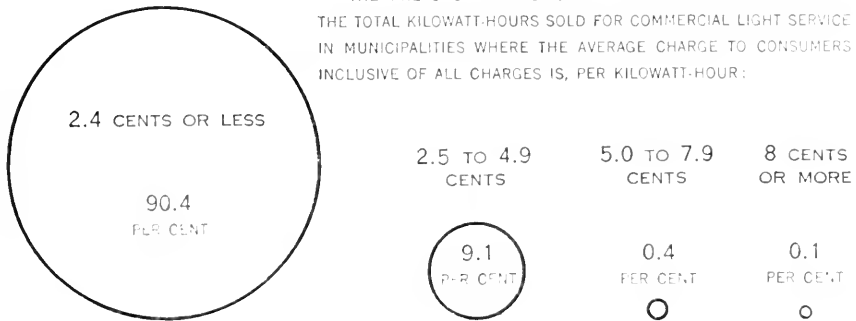

DOMESTIC SERVICE

THE AREAS OF THE CIRCLES REPRESENT PROPORTIONATELY THE TOTAL KILOWATT-HOURS SOLD FOR DOMESTIC SERVICE IN MUNICIPALITIES WHERE THE AVERAGE CHARGE TO CONSUMERS INCLUSIVE OF ALL CHARGES IS, PER KILOWATT-HOUR:

COMMERCIAL LIGHT SERVICE

THE AREAS OF THE CIRCLES REPRESENT PROPORTIONATELY THE TOTAL KILOWATT-HOURS SOLD FOR COMMERCIAL LIGHT SERVICE IN MUNICIPALITIES WHERE THE AVERAGE CHARGE TO CONSUMERS INCLUSIVE OF ALL CHARGES IS, PER KILOWATT-HOUR:

POWER SERVICE SUPPLIED BY MUNICIPALITIES

THE AREAS OF THE CIRCLES REPRESENT PROPORTIONATELY THE AGGREGATE HORSEPOWER SOLD FOR POWER SERVICE IN MUNICIPALITIES WHERE THE AVERAGE CHARGE TO CONSUMERS INCLUSIVE OF ALL CHARGES IS PER HORSEPOWER PER YEAR:

With respect to domestic service, for example, instances will be observed where two municipalities have identical prices or rates for domestic service, but the average cost per kilowatt-hour to the consumer varies by as much as 100 per cent. Such variations are principally due to differences in the extent of utilization of the service for the operation of electric ranges, water heaters and other appliances, an indication of which is afforded by the statistics of average monthly consumption.

Similarly, in the case of power service, the average cost per horsepower cannot be taken as a conclusive indication of the rates for service. The quantity of power taken by a consumer, as measured in horsepower, is, in the case of hydroelectric power supplied to industries at cost, the most important factor affecting costs and revenues, but it is not the only one. The number of hours the power is used in the month or year—which, in conjunction with the power, determines the quantity of energy consumed, as measured in kilowatt-hours—also affects the costs and revenues. Consequently, in two municipalities charging the same rates for power service, the average cost per horsepower to the consumer will vary in accordance with the consumers' average number of hours' use of the power per month.*†

*In interpreting the statistics for power service, it should be remembered that a greater average energy consumption per horsepower sold increases the "average cost per horsepower" to the consumer, and in this respect the "average cost per horsepower" is analogous to the "average monthly bill" in the case of domestic and commercial services rather than to the "net cost per kilowatt-hour." It will be observed that, in the case of domestic service, in two municipalities with the same rates, or in one municipality in different years when no change of rates has been made, a higher average monthly bill denotes an increased average monthly consumption per consumer and a lower average cost per kilowatt-hour to the consumer. In the same way, in the case of power service, in two municipalities with the same rates, or in one municipality in different years with no change in rates, a higher average cost per horsepower denotes a more continuous use of the power and a lower average cost per kilowatt-hour to the consumer.

†In view of the fact that the data of Statement "D" have been misinterpreted in the making of certain comparisons as to the cost of electricity in various territories, it is desirable to add a word of caution respecting their significance. Essentially, the average cost or revenue per kilowatt-hour is *no criterion of rates* even with similar forms of rate schedules and for the same class of service. Much less is it an indication of rates when revenues and consumptions of all classes of service, and of all kinds of rate schedules, are indiscriminately lumped together in order to deduce a so-called "average cost or rate per kilowatt-hour" for all services.

In one community rates for each class of service, and the cost to every consumer in each class for any given service and consumption, may be substantially higher than in another community, and yet there may be in the former community, a lower "average revenue per kilowatt-hour." This will readily be perceived from a simple arithmetical example.

EXAMPLE.—Assume sales of electrical energy by two electric utilities, A and B, in each case 10,000,000 kilowatt-hours.

Class of service	CASE A			CASE B		
	Higher rates and lower revenues per kilowatt-hour			Lower rates and higher revenues per kilowatt-hour		
	Energy sales	Rate per kw-hr.	Revenue	Energy sales	Rate per kw-hr.	Revenue
	kw-hr.	cents	\$	kw-hr.	cents	\$
Residence.....	1,000,000	4	40,000	3,000,000	3	90,000
Power.....	9,000,000	1	90,000	7,000,000	0.75	52,500
Total.....	10,000,000	130,000	10,000,000	142,500
Average revenue	1.3 cents per kw-hr.			1.425 cents per kw-hr.		

It will be observed that in Case A the rates both for residence and for power service are 33 per cent higher than in Case B, but the average revenue per kilowatt-hour is nearly 9 per cent less.

In this instance, the key to the situation lies in the relative quantities of energy sold to each class. Service to large power consumers entails a smaller capital investment in distribution lines and equipment and lower operating costs per kilowatt-hour delivered, than does service to domestic and to commercial light consumers, and even where the rates for all classes of service are low, produces a smaller average revenue per kilowatt-hour. Consequently, if one electrical utility as compared with another sells a larger proportion of its energy for power purposes, its "average revenue per kilowatt-hour" may easily be lower than that of the other utility even though its rates for every class of service are substantially higher.

Although the derived statistics of Statement "D" are valueless as a means of comparing the *rates* in one municipality with those in another, they nevertheless fulfil an important function in affording a general measure of the *economy of service* to "Hydro" consumers that has resulted primarily from the low rates themselves, and secondarily from the extensive use of the service that has been made economically possible by the low rates.

Actual bills rendered to typical consumers for similar service under closely comparable circumstances constitute the best basis for effecting comparisons. In researches respecting rates to consumers the actual *rate schedules* of Statement "E" should be employed, and not statistics of average revenues per kilowatt-hour, as these are valueless for rate comparisons—and particularly so when all classifications of service are combined.

In any consideration of the relative economies of electrical service in the various municipalities—whether based on the actual rates for service as set forth in Statement "E," or on the derived statistics resulting from the rates and other factors as presented in Statement "D"—full account should be taken respectively, of the influence upon costs of such factors as the size of the municipality, the distance from the source of power, the features of the power developments from which service is received, the sizes and concentrations of adjacent markets for electricity, and the sizes and character of the loads supplied under the various classifications by the local electrical utility to the ultimate consumers.

In Statement "D" account has been taken of the sizes of municipalities by grouping them according to whether they are (i) cities—over 10,000 population; (ii) towns of 2,000 to 10,000 population; or (iii) small towns (under 2,000 population), villages, and suburban areas in townships (which are comparable in respect of conditions of supply to the smaller towns and villages). The populations and the approximate transmission distances are also given.

A feature of the electrical service in Ontario municipalities is the strikingly large average annual consumption per domestic consumer. There are in all about 160 Ontario municipalities where the average annual consumption per domestic consumer is in excess of 600 kilowatt-hours. Of the 72 cities and towns with populations of 2,000 or more—in which over 85 per cent of the domestic consumers of the undertaking are served—no less than 43 have an average annual consumption per domestic consumer in excess of 1,000 kilowatt-hours; of these, 23 have an average annual consumption per domestic consumer in excess of 1,500 kilowatt-hours, and 8 have an average annual consumption per domestic consumer in excess of 2,000 kilowatt-hours.

The high average consumption for domestic service results essentially from the policy of the undertaking in providing electrical service "at cost"; the rate schedules scientifically designed according to this principle automatically encourage liberal use of the service. Under the standard rate schedules employed by Ontario municipalities, follow-up rates of 1 cent and 1.25 cents (less 10 per cent.) are in common use, and even where the higher initial rates per kilowatt-hour obtain, it is only necessary for the domestic consumer to reach a monthly charge of less than \$2.50 when he obtains the benefit of a follow-up rate of 1.8 cents net. This places the cost of electric cooking within the reach of nearly every domestic consumer.

STATEMENT

Statistics Relating to the Supply of Electric Energy to Consumers
For Domestic Service, for Commercial Light Service

*This,—with the exception of a relatively small D.C. power load,—is a special service not created by the Hydro-Electric Power Commission but acquired through the purchase of a privately owned company. The service has been continued at the request of the customers who preferred to retain the electrical apparatus installed for this special service, and has been continued at the rates prevailing before the service was acquired by the Commission.

STATEMENT

Statistics Relating to the Supply of Electric Energy to Consumers
For Domestic Service, for Commercial Light Service

Group III—SMALL TOWNS (less than 2,000 population),

NOTE.—The power used in the smaller places and rural districts is, and possibly must always be, a relatively small porportion of the power distributed by the Commission. Thus, the power used by the small municipalities in the following group, which includes small towns, villages and certain suburban areas in townships, is less than 10 per cent. of the power distributed by the Commission to Ontario municipalities. This relatively small porportion of the total power,

Municipality	System	Popula- tion	Distance from generating station	Domestic service					
				Revenue	Consumption	Number of con- sumers	Average monthly consumption	Average monthly bill	Net cost per kw-hr

and for Power Service during the Year 1929

VILLAGES, AND SUBURBAN AREAS

however, exerts upon the economic life of the Province a most beneficial influence. It should further be appreciated that about 35 per cent of these municipalities obtain their power, not from Niagara, but from relatively small and isolated water-power developments throughout the Province. The net cost per kilowatt-hour given in the table is the cost inclusive of all charges. Consult also introduction to Statement "D," page 360.

STATEMENT "E"

Cost of Power to Municipalities and Rates to Consumers for Domestic Service—Commercial Light Service—Power Service in Ontario Municipalities Served by the Hydro-Electric Power Commission for the Year 1929

In Statement "E" are presented the rate schedules applicable to consumers for domestic service, for commercial light service and for power service in each of the co-operating municipalities receiving service at cost through the Hydro-Electric Power Commission.* The cost per horsepower of the power supplied at wholesale by the Commission to the municipality, which is an important factor in determining the rates to consumers, is also stated.

Cost of Power to Municipalities

The figures of the first column in the table represent the total cost for the year of the power supplied by the Commission to the municipality, divided by the number of horsepower supplied. Details respecting these costs are given in the "Cost of Power" tables relating to the several systems, as presented in Section IX, and an explanation of the items making up the cost of power is given in the introduction to that Section.

Rates to Consumers

The Power Commission Act stipulates that "The rates chargeable by any municipal corporation generating or receiving and distributing electrical power or energy shall at all times be subject to the approval and control of the Commission." In accordance with the Act and in pursuance of its fundamental principle of providing service at cost, the Commission requires that accurate cost records be kept in each municipality, and exercises a continuous supervision over the rates charged to consumers.

From the commencement of its operations, the Commission introduced in the municipalities which it serves, scientifically-designed rate schedules for each of the three main classes into which the electrical service is usually divided, namely: residential or domestic service, commercial light service, and power service, and the schedules in use during the past year are presented in the tables of this statement.

*Except townships served as parts of rural power districts, for which consult latter part of Section III.

Domestic Service: Domestic rates apply to electrical service in residences, for all household purposes, including lighting, cooking and the operation of all domestic appliances.

Commercial Light Service: Electrical energy used in stores, offices, churches, schools, public halls and institutions, hotels, public boarding-houses, and in all other premises for commercial purposes, including sign and display lighting, is billed at commercial lighting rates.

Power Service: The rate schedules given for power service in Statement "E" are those governing the supply of power at retail by each of the local municipal utilities. The average amount of power sold, per consumer, under these rates is approximately 40 horsepower—consult Statement "D." The Commission serves certain large power consumers direct on behalf of the various systems of municipalities.

The rates for power service, as given in the tables, are the rates for 24-hour unrestricted power at secondary distribution voltage. For service at primary distribution voltage the rates are usually five per cent lower than those stated. In municipalities where the load conditions and other circumstances permit, lower rates are available for 10-hour power, and for other forms of restricted service. For these classifications, discounts additional to those listed in the table are applicable.

The service charge relates to the connected load or to the maximum demand, as measured by a 10-minute average peak, where a demand meter is installed. The prompt payment discount of 10 per cent on the total monthly bill is given for settlement within 10 days.

Under the tabulation of rates for power service there is a column headed "Basis of rate 130 hours monthly use of demand." This column shows approximately the net annual amount payable for a demand of one horsepower, assuming a monthly use of 130 hours, which includes 30 hours' use each month at the third energy rate. Broadly, the figures in this column serve to indicate approximately the relative cost of power service in the different municipalities listed.

STATEMENT

APPENDIX I

ACT

CHAPTER 20

An Act to amend The Power Commission Act.

Assented to 28th March, 1929.

HIS MAJESTY, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:

1. This Act may be cited as *The Power Commission Act, 1929.* Short title.
2. Subsection 2 of section 6 of *The Power Commission Act* is amended by adding thereto the following clause:

<p>(a) Expenditure heretofore or hereafter incurred by the Commission,</p> <p>(i) for works or services in carrying out the directions of the Lieutenant-Governor in Council or for which the Commission has had other proper authority and which have not already been included in the cost of power to municipalities under contract with the Commission but which, in the opinion of the Commission, have proved or may ultimately prove beneficial to municipal corporations under contract with the Commission for a supply of power, or to municipal corporations which may from time to time thereafter enter into such contracts;</p> <p>(ii) deemed necessary or desirable by the Commission in the interests of municipal corporations then or that may thereafter be under contract with the Commission for a supply of power, in carrying on, promoting</p>	<p>Rev. Stat., c. 57, s. 6, subs. 2, amended.</p> <p>Certain expenditures to be included as part of cost of supplying power.</p>
---	--

or extending the operations of the Commission in connection with the generation, distribution or supply of power or for any work or service deemed by the Commission incidental thereto,

may be included by the Commission as part of the cost of supplying electrical power or energy to any of such corporations, and shall be apportioned by the Commission as provided in this section and section 56.

Rev. Stat.,
c. 57, s. 15,
amended.

3. Section 15 of *The Power Commission Act* is amended by striking out the words "or acquired" in the fourth line and inserting in lieu thereof the words "acquired or performed," and by adding the following clause:

"Works,"
meaning of.

- (a) For the purposes of this section "works" shall, in addition to the meaning given to it in section 2, mean and include preliminary reports, surveys, investigations, engineering, accounting or organization work or service, or any other work or service in connection with or incidental to any proposed construction or development.

Rev. Stat.,
c. 57, s. 20,
subss. 3 to 8,
repealed.

4. Subsections 3 to 8 inclusive of section 20 of *The Power Commission Act* are repealed and the following substituted therefor:

Apportion-
ment of
costs of
works
heretofore
constructed.

- (3) Where under an agreement or any instrument purporting to be an agreement with a municipal corporation the Commission has heretofore constructed works or improvements upon any lake, river, stream or other body of water and it appears to the Lieutenant-Governor in Council that such works or improvements are or may be of benefit to, or increase the value of the land of any individual or corporation other than such municipal corporation, the Lieutenant-Governor in Council may direct a judge of the Supreme Court, or a judge of a county or district court, to inquire into and determine the proportion in which such municipal corporation and any such individual or other corporation are or may be respectively benefited or the value of the land of any of them increased by such works or improvements, and the judge may make an order fixing the proportion in which the cost of such works or improvements shall be borne by the municipal corporation party to such agreement or instrument, and by any such individual or corporation and by the Province respectively, and may fix such proportion without regard to the terms of such agreement or instrument.

When costs
not to be
awarded.

- (4) No costs shall be awarded to any party appearing before the judge or otherwise interested in the inquiry.

Fees and
expenses.

- (5) The judge shall be paid such fees and expenses as shall be fixed by the Lieutenant-Governor in Council.

- (6) For the purposes of this section the cost of the works or improvements shall be deemed to include all expenditures, charges and expenses as fixed by the Commission made or incurred by it in respect of the construction of such works or improvements, extensions and additions thereto, interest charges, operating expenses, repairs and maintenance, down to the date of the order of the judge, the fees and expenses of the judge and the expenses incurred by the Commission in connection with the inquiry. Cost of works, etc., — what to include.
- (7) Any person, or any municipal or other corporation affected by the order made under the authority of subsection 2 or subsection 3 may, with the consent in writing of the Commission, appeal from such order to the Appellate Division. Appeal.
- (8).—(a) The Commission may establish a sinking fund to be provided by the parties in the proportions directed by the order of the judge sufficient to discharge and pay off the cost of such works or improvements and such of the capital costs as may be incurred from time to time by the Commission after the date of the order of the judge within such periods as the Commission may fix having regard to the life of such works or improvements and not exceeding forty years. Sinking fund.
- (b) The Commission shall subsequent to the order of the judge annually fix and determine the costs, charges or expenses incurred by it from time to time in the operation, maintenance, repair and renewal of such works and shall apportion and charge the same against the parties in the proportions fixed by the order of the judge together with the payments in respect of sinking fund hereinbefore mentioned and the amounts so charged shall be payable on demand recoverable in the manner hereinafter provided. Annual apportionment of costs by Commission.
- (9) In fixing the amounts so payable the Commission shall give credit for any amount theretofore contributed to the cost of such works and improvements by a municipal or other corporation or by any individual. Allowance for previous expenditure.
- (10) The amount so found payable by a municipal corporation shall be recoverable in the like manner as in the case of a charge for any other service rendered by the Commission to a municipal corporation and in the case of any other corporation or of an individual the amount so found due shall constitute a debt due to the Commission and shall be recoverable in any court of competent jurisdiction from the owners from time to time of the lands so found by the order of the judge to be benefited by such works or improvements and shall constitute a lien or charge upon such lands enforceable in the same manner and by the same proceedings as nearly as may be as in the case of a charge in favour of the Crown. Recovery of amount assessed.

Share of
Province,
how
payable.

(11) Where a proportion of the cost of such works and improvements is to be borne by the Province the amount due from time to time in respect thereof shall be payable out of any moneys appropriated by the Legislature for that purpose.

How far
order to be
final and
binding.

(12) When the proportions in which the cost of such works or improvements is to be borne have been fixed by order of the judge or of the Appellate Division such order shall be final and binding unless and until it shall appear to the Commission that owing to change of circumstances or conditions in respect of such works or improvements it is equitable that there should be a readjustment of the proportions theretofore fixed by the order of the judge and in that case upon the application of any person liable to contribute to the cost of such works or improvements, made with the consent in writing of the Commission, the judge may make further inquiry and may readjust such proportions to be thereafter applied in such manner as he may deem just and equitable subject to appeal as hereinbefore provided.

Rev. Stat.,
c. 57, s. 40,
subs. 3,
amended.

5. Subsection 3 of section 40 of *The Power Commission Act* is amended by inserting the words "or other" before the word "service" in clause (c), and is further amended by inserting the words "generation, purchase," before the word "transmission" in the eighth line; by adding after the words "power purposes" in the ninth line the following words, "or for the manufacture, procuring, producing, supply or use of any other public utility"; by striking out the words "which has entered into a contract with the Commission for the supply of electrical power or energy" in the tenth, eleventh and twelfth lines and substituting therefor the words "or by any other corporation or any person"; by striking out the words "or commission" in the thirteenth line and substituting therefor the words "commission or person" so that the subsection will now read as follows:

Doing
work for
contracting
municipalities, etc.

(3) The Commission may,—

(a) undertake and carry out the preparation of plans, specifications and estimates for, and the construction, erection, installation and putting down of, any plant, machinery, and other things;

(b) purchase supplies, wires, poles, and other things;

(c) render engineering or other service,

for the generation, purchase, transmission, distribution, supply or use of electrical power or energy for light, heat or power purposes, or for the manufacture, procuring, producing, supply or use of any other public utility, by a municipal corporation or commission, or by any other corporation or any person; and the Commission may charge and collect from such corporation, commission or person the cost of any work done or service rendered by the Commission under this subsection.

6.—(1) Subsection 4 of section 64 of *The Power Commission Act* is amended by adding thereto the following words: Rev. Stat., c. 57, s. 64, subs. 4, amended.

In the event of the enlarging of such area it shall be necessary only to have a petition from a majority of the resident freeholders in the new area; in the event of alteration of the boundaries of any such area the council without petition may from time to time by by-law alter the said boundaries so long as such alteration does not alter by more than ten per cent. the amount of the assessment upon which the special rate is raised to meet the cost as mentioned in subsections 5 and 6 of this section; in the event of any alteration reducing by more than ten per cent. the amount of such assessment the petition must have a majority of the resident freeholders in the area remaining subject to such assessment. Where area is enlarged.

(2) Subsection 7 of the said section 64 is amended by adding after the word "may" in the first line the words "from time to time" and by adding after the word "that" in the second line the words "the whole or". Rev. Stat., c. 57, s. 64, subs. 7, amended.

(3) The said section 64 is further amended by adding thereto the following subsections: Rev. Stat., c. 57, s. 64, amended.

(8) Notwithstanding that any street lighting in a township may have been undertaken as a local improvement under *The Local Improvement Act*, the council upon the procedure and for the purposes set out in this Part may enter into a contract with the Commission for a new area or enlarge any existing area and include in any such area the whole or any part of the lands specially assessed for the local improvement; thereafter all moneys required to meet the costs incurred by the corporation in respect to street lighting in the area shall be raised, levied and collected in the manner prescribed in this Part and only that part of the cost under *The Local Improvement Act* which is specially assessed on the lands not included in such area shall be collected under that Act; Street lighting. Rev. Stat., c. 235.

(9) Whenever the corporation shall have entered into contract with the Commission as provided in subsection 3 of this section it shall not be necessary for the corporation to enter into a separate contract with the Commission for any other area in the township, but the corporation may pass a by-law making such contract applicable to any such other area; thereupon such contract shall apply to such other area as fully as if such area had been included in the original petition for such contract; Contract, application of.

(10) The council of the corporation may from time to time by by-law without the assent of the electors and without any petition as mentioned in this Part incorporate any such area with any other adjoining area in the township and the contract with the Commission for the area with which the other area is incorporated shall apply to the whole area; Extension of contract to adjoining areas.

- (11) Wherever any such area is wholly or partly within an area in the township set apart by the council under section 49, the contract with the approval of the Commission may be made with The Hydro-Electric Power Commission of the said area under section 49.

Rev. Stat.,
c. 57, s. 73,
subs. 1,
amended.

Lighting of
highways.

7.—(1) Subsection 1 of section 73 of *The Power Commission Act* is amended by striking out the words “under the procedure provided for in section 63 and subsections 1, 2 and 3 of section 64” in the second, third and fourth lines and substituting therefor the following words, “under procedure similar to that provided in Part III of this Act,” and is further amended by adding thereto the following words, “and the by-law of the corporation need not provide for the issue of debentures of the corporation to meet the cost of construction and installation of the works necessary for the distribution of the electrical power or energy.”

Rev. Stat.,
c. 57, s. 73,
subs. 6,
(1928,
c. 19, s. 5),
amended.

(2) Subsection 6 of the said section 73 as enacted by section 5 of *The Power Commission Act, 1928*, is further amended by adding after the word “may” in the first line the words “from time to time,” and by adding after the word “that” in the second line the words “the whole or”.

Rev. Stat.,
c. 57, s. 73,
amended.

(3) The said section 73 is further amended by adding thereto the following subsections:

Lighting
highways
in local
areas.

- (7) Whenever the corporation shall under Part III of this Act have entered into a contract with the Commission for the supply of electrical power or energy for the purposes required by the petitioners in any area, the corporation without a petition or any of the other preliminary proceedings provided in the said Part III may by by-law enter into a contract with the Commission for lighting the highways in the said area under this Part and thereafter all the provisions of this Part shall apply to the said area and the lighting of the highways therein in lieu of the provisions of the said Part III.

Application
of subs. 8 to
10 of s. 64.

- (8) Subsections 8, 9 and 10 of section 64 shall apply *mutatis mutandis* to any contract and to any area under this section.

Rev. Stat.,
s. 57, s. 98,
subs. 1, cl. a,
amended.

8.—(1) The clause lettered *a* in subsection 1 of section 98 of *The Power Commission Act* is amended by adding after the word “company” in the third line the word “firm”.

Rev. Stat.,
c. 57, s. 98,
subs. 1, cl. b,
amended.

(2) The clause lettered *b* in subsection 1 of the said section 98 is amended by striking out the words “distribution or supplying” in the fourth and fifth lines and substituting therefor the words “distribution, supplying or use”.

Rev. Stat.,
c. 57, s. 98,
amended.

(3) The said section 98 is further amended by adding thereto the following subsection:

Application
of section.

- (6) Notwithstanding anything herein contained, this section shall not apply to an officer or employee of any such municipal commission who patents a device, appliance, machine, pro-

cess or article of his own invention with the knowledge and permission of such municipal commission and the Commission.

9. This Act shall come into force on the day upon which it receives the Royal Assent. Commencement of Act.

CHAPTER 21

An Act to validate certain By-laws respecting The Hydro-Electric Power Commission of Ontario.

Assented to 28th March, 1929.

HIS MAJESTY, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:

1. This Act may be cited as *The Power Commission Act, 1929* Short title.
(No. 2).

2. By-law number 40-1928 of the corporation of the city of Kings-
ton; by-law number 1669 of the corporation of the city of Sarnia; By-laws confirmed.
by-law number 1820 of the corporation of the town of Lindsay; by-law
number 338 of the corporation of the village of Athens; by-law
number 54-1927 of the corporation of the village of Finch; by-law
number 302 of the corporation of the village of Richmond; by-law
number 222A of the corporation of the police village of Bridgeport;
by-law number 338 of the corporation of the township of Adelaide;
by-laws numbers 504 and 512 of the corporation of the township of
Alnwick; by-law number 356 of the corporation of the township of
Amabel; by-law number 187 of the corporation of the township of
Asphodel; by-law number 20 of the corporation of the township of
Blanshard; by-law number 2030 of the corporation of the township
of Brantford; by-law number A8 of the corporation of the township
of Brighton; by-law number 592 of the corporation of the township
of Camden East; by-law number 680 of the corporation of the town-
ship of Cavan; by-law number 1244 of the corporation of the town-
ship of Chatham; by-law number 4-1928 of the corporation of the town-
ship of Eramosa; by-law number 10 of the corporation of the town-
ship of Ernesttown; by-laws numbers 593 and 604 of the corporation of the
township of Euphemia; by-law number 8 of the corporation of the
township of Finch; by-law number 7 of the corporation of the township
of Fredericksburg North; by-laws numbers 481, 482 and 483 of the
corporation of the township of Gainsboro; by-law number 11 of the
corporation of the township of Garafraxa West; by-law number
9-1928 of the corporation of the township of Goderich; by-law number
595 of the corporation of the township of Gosfield North; by-law
number 17-1928 of the corporation of the township of Grey; by-law

number 615 of the corporation of the township of Gwillimbury West; by-law number 12 of the corporation of the township of Howick; by-laws numbers 6-1928 and 11-1928 of the corporation of the township of Hullett; by-law number 5-1928 of the corporation of the township of Keppel; by-law number 51 of the corporation of the township of Metcalfe; by-law number 403 of the corporation of the township of Montague; by-law number 641 of the corporation of the township of Mornington; by-law number 673 of the corporation of the township of Mulmur; by-law number 18 of the corporation of the township of Osnabruck; by-law number 833 of the corporation of the township of Percy; by-law number 664 of the corporation of the township of Rear Escott and Yonge; by-law number 82 of the corporation of the township of Scott; by-law number 305 of the corporation of the township of Seneca; by-law number 239 of 1928 of the corporation of the township of Stamford; by-law number 8 of the corporation of the township of Stanley; by-law number 3-1928 of the corporation of the township of St. Vincent; by-law number 795 of the corporation of the township of Thurlow; by-law number 461 of the corporation of the township of Tilbury West; by-laws numbers 445 and 446 of the corporation of the township of Trafalgar; by-law number 24 of the corporation of the township of Turnbury; by-law number 779 of the corporation of the township of Tyendinaga; by-law number 1192 of the corporation of the township of Vaughan; by-law number 727 of the corporation of the township of Vespra; by-law number 8-1928 of the corporation of the township of Wawanosh East; by-law number 5-1928 of the corporation of the township of Wawanosh West; by-law number 1015 of the corporation of the township of Whitby East; by-law number 449 of the corporation of the township of Wolford; by-law number 359 of the corporation of the township of Woodhouse; by-law number 8 of 1926 of the corporation of the township of Zone; and all debentures issued or to be issued or purporting to be issued under any of the said by-laws which authorize the issue of debentures are confirmed and declared to be legal, valid and binding upon such corporations and the ratepayers thereof respectively and shall not be open to question upon any ground whatsoever notwithstanding the requirements of *The Power Commission Act* or the amendments thereto or any other general or special Act of this Legislature.

Rev. Stat.,
c. 57.

By-laws
776 and 781
town of
Southamp-
ton
confirmed.

3.—(1) By-laws numbers 776 and 781 of the corporation of the town of Southampton and all debentures issued or to be issued or purporting to be issued under the said by-law number 781 are confirmed and declared to be legal, valid and binding upon the said corporation and the ratepayers thereof respectively, and shall not be open to question upon any ground whatsoever, and the said corporation may enter into a contract with the Commission for a supply of electrical power or energy and such contract shall be legal, valid and binding upon the said corporation and the ratepayers thereof respectively and shall not be open to question upon any ground whatsoever, notwithstanding the requirements of *The Power Commission Act* or the amendments thereto or any other general or special Act of this Legislature, and notwithstanding any action or proceeding heretofore

Rev. Stat.,
c. 57.

commenced or now pending or any judgment or other decision which may be rendered therein; provided nevertheless that the costs in any such action or proceeding shall be awarded and taxed and payable as if this section had not been enacted.

(2) This section shall come into force on a day to be named by the Lieutenant-Governor by his proclamation. Commencement of section 3.

4. Save as herein otherwise provided this Act shall come into force on the day upon which it receives the Royal Assent. Commencement of Act.

CHAPTER 22

The Power Commission and Companies Transfer Act, 1929.

Assented to 28th March, 1929.

WHEREAS by *The Power Commission and Companies Transfer Act, 1924*, The Electrical Development Company of Ontario Limited, The Hydro-Electric Power Commission of Ontario (therein and hereinafter called "the Commission"), National Trust Company Limited (hereinafter called "the Trustee"), the Toronto Power Company Limited and His Majesty the King, represented by the Lieutenant-Governor of the Province of Ontario acting by the Honourable G. Howard Ferguson, Prime Minister of the said Province, were authorized and empowered to execute the agreement set out in the schedule to the said Act, hereinafter referred to as the agreement of the 25th of March, 1924, and it was enacted that upon the execution and delivery of the said agreement the same should be legal, valid and binding upon the parties thereto and upon the *cestuis que trustent* under certain indentures of mortgage recited in the said agreement, including the mortgage dated the 1st of March, 1903, in the same manner and to the same extent as if the terms of the said agreement had been set out and enacted in the body of the said Act, and that thereupon all the properties, rights, assets and franchises of The Electrical Development Company of Ontario Limited should be vested in the Commission but subject to the terms, covenants, agreements, provisos and conditions referred to or set out in the said agreement and subject to the said mortgage of the 1st day of March, 1903, and to the bonds secured thereby and to all the rights by the said mortgage and the said bonds reserved and subject to the due observance, fulfilment and performance by the Commission of all the covenants, agreements, provisos and conditions in the said indenture to be kept, observed and performed by the said The Electrical Development Company of Ontario Limited; and whereas doubts have arisen as to the right of the Commission to require the Trustee under the said mortgage to grant releases of properties and as to the disposition of the considerations received on the sale or other disposition of properties comprised in the mortgaged premises; Preamble.

Therefore, His Majesty, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:

Short title. **1.** This Act may be cited as *The Power Commission and Companies Transfer Act, 1929.*

Conditions of release of certain properties from trust mortgage.

2. In addition to all other powers possessed by it, the Trustee under the said mortgage of the 1st of March, 1903, has since the date of the said agreement of the 25th of March, 1924, and now has, and shall have while any of the bonds secured by the said mortgage remain outstanding and unpaid, power to concur with the Commission in the disposition of any property, real or personal, comprised in the mortgaged premises, and the Trustee shall be entitled, upon the request of the Commission and upon receipt by the Trustee of the consideration to be received on any such sale or other disposition, to release any property from the said mortgage which shall be sold or disposed of for a fair consideration by the Commission, including property expropriated or which may be sold in anticipation of expropriation or after the commencement of expropriation proceedings, but prior to the compensation therefor being fixed pursuant to the authority under which such expropriation is being or is about to be carried out, and thereafter the said consideration shall be paid or transferred by the Trustee to the Commission upon one of the following conditions being complied with:

- (a) Other property acquired or constructed by the Commission since the 25th day of March, 1924, equal in value to the property released, consisting of freehold or leasehold lands or of buildings, improvements, works, plant, machinery or apparatus upon or to be used in connection with property forming part of the mortgaged premises, is substituted for the property released; and which property so substituted may include the whole or any part of the property received as the consideration or part consideration for the property released; or,
- (b) The amount of such consideration or the part thereof so paid to the Commission is received by the Commission for the purpose of making expenditures or for the purpose of recouping the Commission for expenditures made by it on capital account since the 25th day of March, 1924, on buildings, improvements, works, plant, machinery or apparatus upon or to be used in connection with property forming part of the mortgaged premises and which is under or will be brought under the mortgage.

Non-compliance with conditions.

3. If within one year from the receipt of such consideration by the Trustee neither of the conditions mentioned in the last preceding paragraph hereof shall have been complied with, then the consideration if and to the extent consisting of cash shall be added to the sinking fund and applied with the next instalment of sinking fund

moneys and as an addition thereto in the manner in the said mortgage provided for the application of sinking fund moneys, and if and to the extent consisting of property other than cash shall be held by the Trustee as part of the mortgaged premises.

4. The substitution of property or the bringing of property under the mortgage pursuant to the foregoing provisions hereof shall be effected by the Commission delivering to the Trustee a certificate under its corporate seal, executed by the chairman and secretary, containing a description of the property to be substituted or brought under the mortgage, whereupon, or in the case of properties to be erected or acquired, then upon the same coming into being or being so acquired, such property so described shall be and become subject to a first mortgage in favour of the Trustee as part of the mortgaged premises under the said mortgage and subject to the lien and charge thereof.

Mode of effecting substitution of property.

5. The Trustee shall be entitled to rely upon a certificate under the corporate seal of the Commission, signed by the chairman and secretary or by the chief accountant, as to the value of any property released or substituted or brought under the mortgage and as to the amount of any expenditures made or proposed to be made and as to the consideration received for any property released, and in the case of moneys paid to the Commission for the purpose of making expenditures that such expenditures will be made.

Certification of value of substituted property.

6. The said agreement of the 25th of March, 1924, is hereby confirmed and declared to be legal, valid and binding upon the same parties and to the same extent as provided for in *The Power Commission and Companies Transfer Act, 1924*, and as if the foregoing provisions hereof were set out in the said mortgage of the 1st of March, 1903.

Confirmation of agreement of 25th March, 1924.

CHAPTER 55

The Hydro-Electric Railway Act, 1929.

Assented to 28th March, 1929.

1. This Act may be cited as *The Hydro-Electric Railway Act, 1929*.

Short title.

2. The Hydro-Electric Power Commission of Ontario may, as part of the Sandwich, Windsor and Amherstburg Railway acquired and operated by the Hydro-Electric Power Commission of Ontario for certain municipal corporations under the agreement confirmed by section 8 of *The Hydro-Electric Railway Act, 1920*, and by way of extensions, improvements, additional works or equipment therefor, and either as principal trustee, agent or otherwise, lease, obtain running rights over, purchase or otherwise acquire, equip, maintain

Powers of Commission in operating Sandwich, Windsor and Amherstburg Railway.

and operate motor busses, motor coaches and bus lines and any property, rights, franchises or privileges in connection therewith wherever it may appear to the Commission advantageous and profitable from time to time and whether or not within the districts in which said municipal corporations are situate, and may from time to time, lease, sell, mortgage, pledge or otherwise dispose of the same or any part thereof upon such terms as to it may appear desirable, and may enter into any joint ownership, joint operating or joint traffic arrangement with, or any arrangement for sharing of profits, co-operation, joint adventure, reciprocal concession or otherwise with, and take part in the management, supervision or control of the business or operations of any other person, firm, company, corporation, board, commission or undertaking in respect to the ownership, operation, equipment and maintenance of a motor coach transportation service upon such terms and conditions as to the Commission may seem desirable; and the Commission may procure itself to be licensed, registered and recognized in any foreign country or jurisdiction and may designate parties therein according to the laws thereof to represent the Commission and may apply for, promote and obtain from the Dominion of Canada or any other authority, whether dominion, provincial or foreign, and including subordinate and municipal authorities, any statute, ordinance, order, license, franchise, regulation or other authorization or enactment which may seem desirable to the Commission or calculated directly or indirectly to benefit the Commission and may accept, acquire and exercise powers and rights conferred upon it by any such authority to do any of the things or carry on any of the operations herein mentioned outside of the Province of Ontario and may enter into any arrangement or agreement with any such authority; and the Commission may purchase or otherwise acquire on such terms as it may deem desirable shares in any company or corporation carrying on any business or operations similar to those hereinbefore in this section set forth, and hold, sell, mortgage, pledge or otherwise deal with the same.

Expenditures
legalized.

3. Wherever in *The Hydro-Electric Railway Act, 1914*, or, in the agreement confirmed by section 8 of *The Hydro-Electric Act, 1920*, referred to in section 2 hereof, or in *The Hydro-Electric Railway Act, 1925*, or in any amendment or amendments thereof reference is made to expenditure by the Commission to cover the capital cost of extensions or improvements or additional works or equipment of any kind required for said railway such reference shall be deemed to include and to have always included expenditure by the Commission for any of the purposes mentioned in said section 2.

Commence-
ment of
Act.

4. This Act shall come into force on the day upon which it receives the Royal Assent.

APPENDIX II

TRANSMISSION LINE RECORDS

Corrected to October 31, 1929

including

Summaries of data respecting mileage of transmission lines built or acquired by the Hydro-Electric Power Commission. The sizes, materials, lengths and weights of conductors, and other particulars of the high voltage steel-tower transmission lines, the wood-pole transmission lines—excepting 4,000 volts or less—and the telephone lines.

TRANSMISSION LINE RECORDS—ALL SYSTEMS

The total mileage of lines built and acquired by the Commission up to October 31, 1929, for the various systems, excepting all lines operating at less than 4,000 volts, is indicated in the following table:

TOTAL MILEAGE OF TRANSMISSION LINES

System	Miles
Niagara system—220,000-volt, steel-supported transmission lines	*203.22
Niagara system—110,000-volt, steel-supported transmission lines	715.93
Niagara system—110,000-volt, wood-supported transmission lines	68.23
Eastern Ontario system—110,000-volt, steel-supported transmission lines	52.93
Eastern Ontario system—110,000-volt, wood-supported transmission lines	61.58
Thunder Bay system—110,000-volt, steel-supported transmission lines	81.89
Thunder Bay system—110,000-volt, wood-supported transmission lines	82.75
Thunder Bay system—12,000-volt, wood-supported transmission lines	1.45
Niagara system—90,000-volt, steel-supported transmission lines	78.50
Niagara system—60,000-volt, steel-supported transmission lines	54.07
Niagara system—60,000-volt, wood-supported transmission lines	17.12
Niagara system—46,000-volt, steel-supported transmission lines	50.52
Niagara system—30,000-volt, wood-supported transmission lines	21.77
Niagara system—26,400-volt, wood-supported transmission lines	525.02
Niagara system—13,200-volt, wood-supported transmission lines	444.60
Niagara system—12,000-volt, wood-supported transmission lines	178.03
Eastern Ontario system—Central Ontario district—(44,000-volt and less)	508.29
Georgian Bay system—(38,000-volt and less)	43.14
Georgian Bay system—	
Severn district—(22,000-volt)	175.88
Eugenia district—(22,000-volt)	263.07
Wasdells district—(22,000-volt)	82.95
Muskoka district—(38,000-volt and less)	26.47
Eastern Ontario system—	
St. Lawrence district—(44,000-volt)	119.92
Rideau district—(26,400-volt)	76.96
Madawaska system—(33,000-volt and less)	39.25
Nipissing system—(22,000-volt)	23.66
Total	3,997.20

NOTE—Of the above the Niagara system is operated at 25 cycles. The other systems are operated at 60 cycles.

*Second circuit completed to Oct. 31, 1929 = 112.02 miles.

APPENDIX III

DISTRIBUTION LINES AND SYSTEMS

Summaries of Data respecting Rural Distribution Systems, Distribution Feeders, Metering Stations, Distributing Stations and Distribution Systems constructed by the Hydro-Electric Power Commission

Below is shown in tabular and descriptive form the work carried on under the supervision of the Distribution section of the Electrical Engineering department during the year ended October 31, 1929.

This work includes the construction of rural distribution systems, the installation of feeders to supply urban municipalities and the construction of metering equipments.

Work in connection with distribution systems was done by the Commission for certain municipalities, private companies, etc., at the request and at the expense of the parties concerned.

DISTRIBUTION FEEDER CONSTRUCTION

During the year ending October 31, 1929, the following work was carried on in connection with distribution feeder lines.

N 364x67—East York Township Limits to Markham Junction.**N 333x2—Scarborough Township Distributing Station to Agincourt.**

Due to the erection of a distributing station at Scarborough, certain rearrangements were made necessary. The line N 364x67 has now been wiped out of capital. From East York township limits to the corner of Kennedy road and St. Clair avenue, the line has been in part dismantled and the remainder sold to Scarborough Township hydro-electric system. From the corner of Kennedy road and St. Clair avenue to Agincourt the line has been redesignated as N 333x2 and the existing No. 6 copper conductor changed to No. 2 steel-reinforced aluminum. From Agincourt East to Markham junction, the capital has been transferred to Scarborough rural power district.

A new 4000/2300-volt three-phase line was built from Scarborough Township distributing station to the corner of Kennedy road and St. Clair avenue to connect up with the existing line N 364x67.

The new line N 333x2 is now 5.56 miles in length and was placed in service March 11, 1929.

N 1305x6—Milton Brick Company to Streetsville Junction.

The capital in this line was transferred to Streetsville Rural Power District on March 20, 1929.

N 1455x26—Fletcher Distributing Station to Merlin.

Due to the construction of a distributing station at Merlin and the extension of the 26,400-volt line from Fletcher to Merlin, certain arrangements were made necessary. The poles of the existing line were used to carry the 26,400-volt circuit and the 4000 2 300-volt conductors were lowered on the same pole line and now constitute a new feeder N 1456x27 to supply the Denison Tile Company in Fletcher from the Merlin distributing station. The existing steel neutral was replaced by a No. 4 steel-reinforced aluminum cable. It was placed in service on December 9, 1928.

DISTRIBUTION FEEDER CONSTRUCTION—Continued**N 1509x21—Sandwich to La Salle.**

A 26,000-volt line was constructed to serve La Salle. Part of the capital invested in this feeder was transferred to Sandwich rural power district and the remainder of the line was dismantled.

N 1817x28—Sarnia to Courtright.

Two additional conductors were strung from Corunna to Courtright making this line three-phase throughout. In service February 27, 1929.

C 22x2202—Newcastle Distributing Station to Orono.

This line was single-phase. Two additional conductors were strung in order to give three-phase service. In service January 27, 1929.

C 22x2201—Newcastle Distributing Station to Newcastle.

This line was single-phase. Two additional conductors were strung in order to give three-phase service. In service January 27, 1929.

C 24x2402—Oshawa to Whitby.

Whitby is now fed by a 44,000-volt line. The capital in the above 4000 2300-volt line was transferred to Oshawa rural power district on February 24, 1929.

E 24x2402—Holyrood Distributing Station to Lucknow.

The conductors on this line were changed from No. 2 steel-reinforced aluminum to No. 3,0 steel-reinforced aluminum. In service April 29, 1929.

L 19x1901—Lyn Distributing Station to Athens.

A new 8000 4600-volt line was constructed to supply the village of Athens from Lyn distributing station. This line is 14 miles long and was placed in service December 21, 1928.

Bala District

On April 28, 1929, the distribution system of the Bala Electric Light Company was purchased by the Hydro-Electric Power Commission of Ontario.

This purchase included the following properties which for convenience are here listed as "Distribution Feeders."

G.B. 1301—Bala Distribution System.**G.B. 1302—Port Carling Distribution System****G.B. 1303—MacTier Distribution System.****G.B. 1304—Medora Distribution System.****G.B. 13 x 1362—Bala Generating Station to Butterfly Junction.**

This line carries a 3-phase, 6,600-volt circuit and a 3-phase, 13,200-volt circuit and is 5.70 miles in length.

G.B. 1362 x 32—Butterfly Junction to Port Carling Station

This line is a 3-phase, 6,600-volt and is 3.9 miles in length.

G.B. 1362 x 33—Butterfly Junction to MacTier Station.

This line is 3-phase, 13,200-volt and is 7.1 miles in length.

Twenty-Eighth Annual Report

OF THE

Temiskaming and Northern Ontario Railway Commission

ONTARIO GOVERNMENT RAILWAY

Hon. G. Howard Ferguson, Premier

For the Year Ending October 31st

1929

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO

SESSIONAL PAPER No. 5, 1930

ONTARIO

TORONTO:

Printed and Published by Herbert H. Ball, Printer to the King's Most Excellent Majesty

1930

TO HIS HONOUR W. D. ROSS, ESQ.,

Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present to Your Honour the **Annual Report** of the Temiskaming and Northern Ontario Railway Commission for the twelve months ended October 31st, 1929.

Respectfully submitted,

(Sgd.) G. HOWARD FERGUSON,

Prime Minister,

TEMISKAMING AND NORTHERN ONTARIO RAILWAY COMMISSION

GEO. W. LEE.....Chairman, North Bay
LT.-COL. L. T. MARTIN.....Vice-Chairman, Ottawa
COL. J. I. McLAREN.....Commissioner, Hamilton
W. H. MAUND.....Secretary-Treasurer, North Bay

TEMISKAMING AND NORTHERN ONTARIO RAILWAY

Due to the gradual changing conditions of general business throughout the country, the operation of the road for the past fiscal year has resulted in restricted opportunity and this is reflected in reduced traffic earnings for the period.

This condition has been met by increased economy in service and operation, minimizing to the fullest extent the reduction in traffic et al.

The very comprehensive measure of relief to farmers and settlers generally inaugurated by the Provincial Government in 1928 has been maintained by this Commission during current year, resulting in the purchase of railway ties, etc., for present and immediate future requirements.

* * * * *

The year just ended has witnessed a highly satisfactory growth in the mining industry of Northern Ontario, and while in many cases individual mines have proved somewhat disappointing and some retrogression is noted, on the whole the progress has been highly gratifying and new properties are approaching the producing stage.

Looking forward, the mining industry appears to be assured of increasing production and expansion, and the intensive campaign of exploration of recent years has opened up new fields for the industry, which promises in time to record further advances along the line.

How long this yearly expansion will continue is impossible of prediction, but as the vast unexplored pre-Cambrian territory is opened up, there is every reason to anticipate steady progression and new wealth in this line of endeavour.

* * * * *

The extension of the main line north of Cochrane has been completed to approximately 95 miles beyond that point, and the recent exploration and drilling activities in the coal deposits near Blacksmith Rapids on the Abitibi River, undertaken by the Provincial Government under the supervision of Dr. W. S. Dyer have disclosed a field of commercial lignite in a proved area of two to three miles.

The average thickness of the several seams explored is 20 feet in depth, indicating about twenty (20) million tons of lignite per mile definitely locating at present date between 50 and 60 million tons.

Indications are that this coal underlies much of the Blacksmith Rapids basin, which is about 625 square miles in extent and is found in what are called "cretaceous basins," which roughly correspond to the wet muskegs of the coastal plains in size and extent, and the combined area of these "cretaceous basins" already located is estimated as 2,000 square miles.

Needless perhaps to say that the potential wealth thus disclosed will have far reaching effects in the near future.

In addition there have been found in the basin of Moose River high grade clay deposits in the vicinity of the Mattagami and Missinabi Rivers. This clay is suitable for high grade china, floor tiling and vitrified products generally.

Certain geological formations in the Moose river district are noted by Dr. Dyer as being very similar to the oil-bearing section of South Western Ontario, and in the states of New York, Ohio and Indiana, so that oil and gas discovery is probable in this Moose River district.

The possibilities are such that the Province of Ontario may have an industrial north in the future.

* * * * *

The economic position of the country is fundamentally stronger than some recent events would indicate.

Unfavourable weather in the northern agricultural districts during the greater part of spring months, mitigated to a large extent the possibility of average crops, and industrial operations slackened in most cases due to these conditions.

The newsprint industry experienced slightly better conditions than anticipated in the early part of the year, but the business as a whole is still undergoing adjustment in price and output, due to over expansion and over production.

Construction and mining continue among the strongest supports of the business structure.

* * * * *

It is conceded to a certain extent that the great rise in security prices during the past five years—and which ended in October so abruptly—contributed largely to the great prosperity of the country. This influence has now been largely withdrawn, and to this extent the stock market will be responsible for slowing down the wheels of industry.

The slackening of the pace is not serious, but nevertheless it has occurred and despite the fact that a minor recession of business is undoubtedly visible we are not warranted in supposing that a serious industrial depression must ensue.

This is but a pause in our economic progress, and its duration should be comparatively short, due to the strong economic position of the country, and its legitimate expansion.

Nothing that has occurred in this regard need undermine our confidence in our continued and increased prosperity.

* * * * *

The continued policy of branch line construction and main line extension, have resulted in bringing the mining, farming, lumber and general industries, served by the Commission, into close proximity with the financial and business centres of the province and the United States, while the operation of most modern steel trains serves the requirements of the travelling public to the fullest extent.

The Temiskaming and Northern Ontario Railway is prepared to continue its policy of extension and expansion to meet the growing requirements of the territory served.

* * * * *

During the year under review Commission paid the sum of \$240,000.00 to provide for matured interest on its debenture bond issue of \$6,000,000.00.

* * * * *

Insurance against loss by fire has been carried in the sum of \$3,400,000.00.

I am pleased to record in conclusion that the railway is in excellent physical and financial condition.

	1929	1928
Revenue—Transportation.....	\$4,642,799 24	\$4,993,274 01
Revenue—Incidental.....	327,482 89	345,984 07
	<hr/>	<hr/>
Decrease, 1929 (6.91 per cent.).....	\$4,970,282 13	\$5,339,258 08
	368,975 95
	<hr/>	<hr/>
Expenditures—Operating.....	\$3,627,828 89	\$3,822,252 91
Other Expenditures.....	314,573 07	313,875 71
	<hr/>	<hr/>
Decrease, 1929 (4.68 per cent.).....	\$3,942,401 96	\$4,136,128 62
	193,726 66
	<hr/>	<hr/>
Net Earnings.....	\$1,027,880 17	\$1,203,129 46
Decrease, 1929 (14.5 per cent.).....	175,249 29
	<hr/>	<hr/>

The gross revenue from all sources in 1929 shows a decrease of \$368,975.95 (6.91 per cent.) as compared with 1928, and gross expenditure a decrease of \$193,726.66 (4.68 per cent.) resulting in a decreased net revenue of \$175,249.29 (14.5 per cent.) as compared with preceding fiscal year.

* * * * *

This decrease in operation volume during 1929 was directly attributable to the gradual but general slackening of business conditions throughout the country, which in common with other railroads, was necessarily reflected in the earnings of the T. & N. O. Railway. The consequent reduced freight and passenger traffic is, in our opinion, not an indication of permanent retrogression of the affairs of the Northern country served by the T. & N. O. Railway, but shows an adjustment of business conditions preceding a general advancement in all lines of endeavour in the near future as the conditions of the territory, as a whole, enlarged and expand.

GEO. W. LEE,
Chairman.

AUDITORS' REPORT

EDWARDS, MORGAN & COMPANY
TORONTO, ONTARIO

December 20th, 1929.

To the Commissioners,
Temiskaming and Northern Ontario
Railway Commission,
North Bay, Ontario.

On your instructions we have conducted an audit of the Treasurer's accounts of the Temiskaming and Northern Ontario Railway and the Nipissing Central Railway for the year ending October 31st, 1929 and have satisfied ourselves that all receipts have been properly accounted for, and that satisfactory vouchers are on hand to cover disbursements. We have checked the balances in the hands of the Treasurer and find them to be in agreement with the accounts as shown by the general ledgers.

The accounts of the Treasurer are in good order and well kept. All information asked for has been cheerfully given. We also wish to acknowledge the courtesies of the Commission and its employees at all times.

EDWARDS, MORGAN & COMPANY,
Chartered Accountants.

REPORT

OF THE

Minister of Education

FOR THE YEAR 1929

TO HIS HONOUR W. D. ROSS, ESQ.,
Lieutenant-Governor of the Province of Ontario.

YOUR HONOUR:

I beg leave, in accordance with the usual procedure, to present the annual report of the Department of Education for the year 1929. The educational conditions in the Province are generally satisfactory, and there is no reason to doubt that the progress of the school system is maintained by the healthy state of public opinion on this most important subject. It is essential that school policy of whatever kind should depend upon popular acceptance of new proposals and reforms to ensure a natural development and that local administration should be left, in the largest possible degree, to the trustee bodies who are charged with that duty by the school laws and whose function it is to find the chief financial support. The events of the year include a marked improvement in attendance; a continuance of the extension of the course of study in rural primary schools; the expansion of secondary education both in its vocational and academic aspects; the transfer to the Provincial authorities of rural county inspection on similar lines to what has always prevailed in district inspection; the growth of special instruction for retarded pupils who are handicapped by physical or mental causes, by remoteness from school centres, or by any other causes which prevent them from following the ordinary classes; a reasonable response from school boards in providing needed accommodation; the employment of trained teachers with a preference for those holding higher certificates. In all these and other outstanding features of present-day educational interests, it is gratifying to report that the schools of Ontario are abreast of the times. There is still much to do, but under adequate leadership and with the existing alertness and enterprise of school ratepayers, what is required will be accomplished in due course. No visible tendency to dwell upon past achievement or to modify the generous support of the schools which has been characteristic of Ontario for many years is discernible.

Improved Attendance

A practical test of existing conditions in education is the attendance. The complete statistics for 1928, the latest obtainable, show an enrolment of approximately 731,000 pupils, an improvement of six per cent. over the previous period.

The improvement extends over urban and rural schools and is true of the old counties as well as the northern districts not under county organization. Analysis shows that 35,000 more pupils in 1928 than before were obtaining, on the basis of attendance, an adequate elementary education. The chief cause of irregular attendance is illness and this operates more in urban centres than in rural areas, as communicable diseases flourish where the population is denser. The importance of health inspection of schools is thus demonstrated. As so many of the leaders in all the professions and occupations come from the country, it is natural to find that ill health, as a source of absences, is not so prevalent. The cause there is home duty. The school leaving age in Ontario being sixteen (a fact in our favour commented upon by the recent visit of a group of distinguished Headmasters from the great English Public Schools), the attendance of adolescents in Ontario is worthy of note. In 1928 there were over 98,000 of these in the secondary schools and over 56,000 in the elementary schools. Under this class, and ignoring the improvement incident to increase of population, the improved attendance accounts for approximately 4,000 pupils. Care and good judgment are being used in the enforcement of the compulsory school laws and resort is had as seldom as possible to the courts for infringements both in the cases of whole-time and part-time pupils. I desire once more to acknowledge, thankfully, as does the Provincial Director of School Attendance in his report, the useful efforts of various organizations by kindly persuasion and helpful measures to see that the children are kept at school.

The Elementary Schools

As the elementary schools are the basis of the public provision for education, their welfare must be a matter for constant attention and concern. The situation in respect of these schools is on the whole most encouraging, but there are so many of them and the conditions vary so much according to the locality and surrounding circumstances that any generalization upon the reported facts should allow for the need of improvements even if the average is good. The Department receives from the Inspectors full information on every possible phase of school welfare. Emphasis is placed equally upon the merits and defects of the schools and it is a tribute to the vigilance and ability of these officials that the Department is kept so well posted by means of their careful and fearless comments upon what they find. The school, through its curriculum and teaching, touches the pupils from the standpoints of moral, mental, and physical training. No school, probably, is a perfect register of what is required in all these respects, but, taking the reports from all parts of the Province, one is impressed by the great advances that have taken place in ten years. The elementary schools are in a sound condition; the ratepayers, as a body, are awake to progressive measures; the standard of popular education is higher than ever before. But optimism should not be allowed to limit efforts to improve. There are localities where the attendance is poor; where better accommodation is badly needed; where the financial management of the ratepayers' money is not on business lines; and where the instruction is inefficient in one subject or another. The schools are owned and controlled for all purposes by the people themselves and it is chiefly by suggestive measures that improvements can be effected. To this end, inspection of the right sort is a valuable factor. The transfer of the county inspectors to the Province, which had for many years been paying the larger proportion of their salaries, follows the policy which has been in force from the outset in regard to district inspectors. Dual responsibility in such matters seldom produces the best results. The growth

of education in the northern pioneer settlements of Ontario has been promoted by inspection under Departmental control and similar benefits may be expected in the older section of the Province from the change. The county inspectors, as a body, have been handling innumerable local problems by the expenditure of energy, tact, and knowledge, and through the new system of co-operation and sympathetic inspection their work should be easier and the fruits of their labours more tangible. It is they who have to explain the requirements of the law and regulations to school boards and to encourage advances in education, and it is significant that when the opportunity occurs for conferences with the ratepayers direct no difficulty is found in securing the support of any locality for improving school conditions. Under the new system, the inspectors of rural schools will speak with the authority of the Department behind them. They will have important duties to perform. No school grant, municipal or other, will in future be paid without their warrant and the details of what each grant is for will be stated in the warrant. This is to give to municipal authorities a full statement of the purposes for which the money is required. It is my conviction that the year 1930 will take its place in the list of years marked by progressive measures in education on account of the change in inspection alone.

Fifth Class Work

The extension of fifth class work in the elementary schools continues to be one of the most remarkable evidences of local zeal to have the local schools teach the entire course of study in order that pupils may attend daily and still be near home. There are cases where secondary school instruction is accessible and fifth classes are not indispensable. But in the majority of localities this is not so. There are trustee boards not fully aware that fifth class work is obligatory, not optional, where the ratepayers have children sufficiently trained to pursue this part of the course. The demand for the extension of the public school course comes from the people themselves and in this lies the best guarantee of its permanency. During 1929 there was an attendance of 2,360 pupils in the three grades of fifth classes and part at least of the course was taken up in 623 other schools, so that in almost one thousand rural schools fifth class instruction has been given to 5,462 pupils. It is estimated that if this work had been done in urban schools, the additional cost to them would have approximated \$600,000. The suggestion has been made, and will be duly considered, that financial aid should be held out as a stimulus to the whole movement. The willingness of the teaching profession to attend, at their own expense, the Summer courses where special training leading to higher certificates in different subjects may be secured is a strong proof of their professional pride and zeal, while the second year in the Normal School courses will also provide the requisite staffs for fifth class work. The process of extending school courses, therefore, is widespread and moving forward.

French-Speaking Pupils and English

The reports submitted to the Department through the Director of English Instruction, the Director of French Instruction, and the Separate School Inspectors, indicate that the efficiency of the schools attended by French-speaking pupils is gradually advancing and it is gratifying to the Department to observe the increasing spirit of co-operation. The third year of the operation of the plan adopted in 1927, following the report of the Committee of Enquiry, has been attended by results distinctly better on the whole than those obtained

during the first two years. Better provision for the adequate supervision of the schools accounts, in no small measure, for the improvement already secured.

One of the most promising features of the situation is the large increase in the number of teachers in training for First and Second Class certificates at the University of Ottawa Normal School. During the session of 1928-29, there were fourteen students in attendance at this institution; during the present session there are forty-six. Judging from the large number of French-speaking students who are taking the courses in the Middle School and the Upper School, I am confident that there will be another large increase in the attendance at the Normal School next year. The summer schools are also doing an important work in assisting teachers, already in service with lower-grade certificates, to obtain standing which will admit them to the Normal School. The Department is sparing no effort to improve the qualifications of the teachers as a means of raising the general level of efficiency in the schools attended by French-speaking children.

Secondary Education

The expansion of secondary schools continues, from year to year, to be an outstanding feature of the system. In 1929 there were 63 Collegiate Institutes and 142 High Schools in the Province. The boards, in the great majority of cases, have shown energy and efficiency in providing for the larger attendance. New buildings have been erected with every attention to modern requirements to ensure good instruction, to promote the health and comfort of pupils and to make the community take pride in its school. Of the Collegiate Institutes, only seven out of sixty-three have retained the old buildings, and of the High Schools more than one-half are either in new buildings or in modernized structures which fulfill all the purposes in view. Large as the necessary expenditures has been, the effect on school life by the creation of gymnasiums, auditoriums, reading rooms, and libraries well repays the outlay and a standard has been set that is bearing fruit in the general improvement observable in the educational equipment of our young people. The staffing of High Schools and Collegiate Institutes entails the employment of more than two thousand teachers whose qualifications, both academic and professional, are of high grade and confer upon this branch of the profession an enviable position in respect of scholarship and thoroughness. Comparisons are seldom of value in such matters, but it may be said with due moderation that the secondary school teachers of Ontario do not stand second to those of any other English-speaking community. The development of High School work in preparing pupils for the professions, the universities, and the ordinary occupations proceeds satisfactorily.

There are 217 Continuation Schools in the Province, employing 479 teachers, and these schools situated so near the homes of pupils, both in the smaller centres and the rural areas, continue to do a very important work and inspection shows that they are steadily improving in the quality of the teaching and consequently in the achievement of the pupils. While instruction in agriculture grows in favour, there is still room for additional attention to this subject. It is suggested that there might be a grouping together in certain sections of Continuation Schools, a policy which can be worked out by co-operation among the boards rather than by other methods not presently available.

Technical Schools

One cause of the development of vocational training is the adequate provision for a supply of teachers for the work and such a supply has been secured since the Province established its own training college at Hamilton. The result

is that the technical schools, which had formerly to depend upon craftsmen without experience in teaching, may now secure qualified teachers, and as the number of technical schools will probably not increase at the same pace as hitherto, school boards are reasonably certain to be able in future to count upon qualified staffs. The training college has maintained, during the past year, the method of reaching the teachers who are in occupations of their own by circular letters dealing with various aspects of the teaching processes, so that the proportion of those who were without professional training grows smaller. The Summer courses for the special certificate have been well attended and twenty-six candidates of the forty-six teachers have completed the residence courses and will now proceed to the tests in trade knowledge and skill. The senior group, as part of their work, have drawn up courses of study which will be available in the new apprenticeship courses for the building trades. The manual training courses for the specialist certificate have evoked a hearty interest from those who attended, and the course in the domestic arts, especially in dressmaking, has produced satisfactory results. The work of the college in providing for guidance as a subject of study for the ordinary certificate is also noteworthy. The fact that vocational teachers return for Summer courses and the success of the conference of vocational school principals are encouraging signs of the zeal and enthusiasm with which this branch of education is being pursued.

The enrolment of pupils in forty-seven day schools is approximately 23,000, while the evening classes, providing as they do a great variety of courses, draw 41,000 students representing almost every trade and occupation and since arrangements were made for matriculation in applied science, commerce and finance, and household science, there are few obstacles left in the way of self-improvement.

Instruction for New Canadians

A feature of the evening industrial classes which should not be passed over is the instruction in English for those who are new to the country and who desire to improve their knowledge of our language. The instruction which is usually given by public school teachers, and sometimes by high school teachers, is for the most part of an elementary character, but in some places pupils return for additional instruction and are taught in separate groups. Testimony is borne by the teachers to the intense application shown by the classes and to the pleasure which is felt by the instructors in imparting knowledge to those who are so eager to fit themselves for life in Canada. The text-books in use are selected at will from those available and the value of illustrated books is especially marked. There are nearly forty of these classes with an attendance of 3,166 at various points in the Province, including all the large cities and industrial towns and in Northern Ontario such places as Fort Frances, Fort William, Iroquois Falls, Kapuskasing, Kenora, Kirkland Lake, Smooth Rock Falls, South Porcupine, Timmins, and Sudbury. Last year the classes were inspected by the Assistant Director of Technical Education who reports: "Possibly the largest number of students enrolled in any centre will be found in the city of Hamilton. Here some six hundred (600) pupils are enrolled for this winter's instruction. These classes are conducted in three schools in the city. On one occasion during my inspection the evening classes were holding their final session. This session took the form of a banquet in the Technical Institute cafeteria. The idea of the banquet was to have as many persons as possible propose toasts and to reply to them, the English language naturally being

used throughout. It was surprising to find the facility with which some of these new Canadians were able to express themselves after so short a term of instruction. Notwithstanding the fact that these classes are composed of all nationalities, including Swedes, Norwegians, Ruthenians, Russians, Germans, Dutch, Danish, French, etc., it has not been my experience to find that these classes were used for anything other than the purpose for which they were organized."

Correspondence Courses

It is now four years since correspondence courses for the benefit of children living out of reach of any school were set up. When we consider the vast extent of Northern Ontario, much of which is still in the pioneer stages of development, it can be readily understood that there will be many families containing children of school age situated in regions remote from any school, and where there is no possibility of educating them except by the method of correspondence lessons. That these lessons are effectively meeting the purpose for which they were begun is amply verified by the rapid increase in the numbers enrolled from year to year, the increase being from 200 in 1926 to 800 in 1929. Lesson assignments based on the Public School Text Books are sent out two or three times a month to each of the children enrolled, and it is found that they return their lessons with surprising regularity. The lessons returned are examined by well-qualified teachers in the employ of the Department, who find that the majority of those taking these lessons make just as good progress as they would in a well-conducted school. I might add that since the course began, letters have been received at the Department of Education from parents and guardians of the children stating how delighted they are that it has been made possible for them to have such an opportunity of having their children educated. Although all the necessary books and supplies are provided free, the average cost per year to the Department per child enrolled is about \$15.00. The courses cover all the Public School work from the beginning as far as the High School Entrance Examination, and they meet the educational needs not only of those who live too far from a school to attend, but also those who can attend for the Summer but not for the Winter. Seventy-five per cent. of those who have tried the Entrance Examination have been successful. In fact, the general results have been successful beyond all expectations, and too much cannot be said in praise of the co-operation of the parents, and the perseverance of the children in carrying on this work, no doubt, in many cases, under very unfavourable circumstances.

The Railway School Cars

This unique service in education grows apace. Four cars are already in commission, two on the Canadian National Railway and two on the Canadian Pacific Railway. An additional car has just been reconstructed and outfitted for use on the Canadian National Railway. The equipment has improved with the regularizing of the service and the fuller knowledge of the needs. It will interest all who are concerned in this attempt to reach isolated pupils that the new car is the last word in this form of school equipment. The following features are worthy of note: (1) The walls and roof of this car have been insulated with hair felt; the floors are double boarded, felted between and covered with Battleship linoleum; and an improved heating system has been installed with a view to ensure comfort in the severest weather of winter, which at times registers fifty degrees or more below zero. (2) The beds are now all convertible seats and

lounges, occupying less space and usable both day and night, thus adding much to the artistic effect and the convenience of the cars. (3) Every article of kitchen and living room equipment is fixed to prevent shifting and breakage with the car movement. Every article of working equipment in the class room is likewise fixed and in place for use. Books for children and adults now occupy built-in wall cases, which economize space and conform fully with the general plan of the car.

The school car, needless to state, has fully vindicated itself as a medium for the education of isolated children as well as that of a socializing and Canadianizing influence. Children have made exceptional strides in learning, due largely to the personal incentive which the car naturally inspires. Children even of non-English parentage, who knew little of spoken English and nothing of reading and writing, have acquired fair facility in a few weeks' tuition. Some who have passed through the grades in the course of the past two or three years have shown such initiative and self-dependence as to readily outdistance their school mates when transferred to regular schools. This results from their being thrown largely on their own resources for independent study with a minimum of necessary instruction and guidance on the part of the teacher. Under the night classes the parents and older members of the families, eighty-five per cent. of whom are non-English, have acquired power not only to read and write English, but to understand and carry out intelligently their business responsibilities, such as letter writing, making systematic reports in railroad work and computations in connection therewith. The teachers' wives have likewise exercised a helpful influence in directing the female section of these communities in home craft and other needful services. The school car is a constructive force in the way of building the new Canadian into wholesome and loyal citizenship. Bolshevick propaganda finds no place or acceptance wherever the school car operates. A superintendent of one of the railways expresses his keen appreciation of this fact and volunteers the information that since the last car was installed not fewer than thirteen mid-European immigrants along the 150-mile stretch of territory covered by this car have become naturalized Canadian citizens. There is no doubt that the next generation will fall naturally into their places as loyal citizens.

A new departure has been instituted in the way of dental service for the child and adult population served by the cars. Accommodation is provided thereon for a dental practitioner who operates under the auspices of the Department of Health and furnishes free clinical and practical service. With portable equipment, he will follow up the cars in series until the full territory is covered. No more urgent practical need exists in the sparsely populated territory of the North than that of dental, nursing, and medical service, and it is hoped the school car will furnish a natural means to this end. At first there was a not unnatural apathy to the new departure on the part of the railway executives, but now they endorse the plan. The four cars now cover about six hundred miles of railway territory. The new one is for the Port Arthur-Fort Frances division, and will add another two hundred miles, with fifty-one children. The railway managements state that for contented workmen no institution has served the outlying rural areas like this service. Great credit must be given to the teachers, who must possess not only scholarship and organizing ability, but personal qualities and adaptability to strange conditions, of an exceptional order.

It is unnecessary to dwell here, in detail, upon other phases of the educational work of the Province, phases which are fully dealt with in the reports of the

officials in charge. The schools for the Deaf and for the Blind, the growth of Auxiliary Classes for handicapped children, and other activities have, during the year, registered steady progress, and the report on each is well worthy of perusal.

The whole respectfully submitted.

G. HOWARD FERGUSON,
Minister of Education.

APPENDIX A

**REPORT OF THE CHIEF INSPECTOR OF PUBLIC
AND SEPARATE SCHOOLS.**

Inspectoral Changes

The following changes took place in the Provincial Inspectoral Staff during 1929:

I.—BY DEATH:

W. I. Chisholm, Assistant Chief Inspector of Public and Separate Schools; J. Russell Stuart, Kingston; J. M. Cole, North Oxford County; Edwin Longman, South Simcoe County; Dr. A. E. Marty, Toronto; Lieutenant-Colonel J. J. Craig, South Wellington County.

II.—BY RESIGNATION:

Robert Boyes, Northumberland and Durham; E. E. C. Kilmer, Brantford; Robert Galbraith, Wellington North.

In Memoriam

On May 15th, 1929, Mr. W. I. Chisholm, M.A., Assistant Chief Inspector of Public and Separate Schools, passed away at his home in Toronto.

Mr. Chisholm was a native of Embro, in Oxford County, and received his elementary and secondary education in that county. In 1894 he graduated with M.A. standing from Queen's University, obtaining at the same time the medal in biology. He taught in the high schools of Paisley and Walkerton and later became Principal of the Walkerton Model School. In 1902 he was appointed Public School Inspector for West Bruce. In 1910 the Department of Education asked Mr. Chisholm to accept appointment on the staff of the Peterborough Normal School. The Department again honoured him in 1918 by inviting him to accept the office of Assistant Chief Inspector of Public and Separate Schools. This latter position he occupied until his death. At the meeting of the Ontario Educational Association held during Easter week, 1929, Mr. Chisholm received by election from the teachers, inspectors and trustees of the province the finest tribute they could pay him, the presidency of the Association for the year.

In the death of Inspector Chisholm the Department of Education and the Province at large suffered the loss of an outstanding teacher and inspector, who brought to bear at all periods of his service a high natural aptitude as a teacher, a sympathetic understanding of the problems of the teacher, a fruitful and loyal service to all whom he served, and a tactful and accurate judgment of administrative problems affecting the schools.

Mr. J. Russell Stuart had retired as Public School Inspector for the City of Kingston in 1927, his retirement being made necessary by failing health. On February 6th, 1929, Mr. Stuart died in Vancouver.

In 1909 Mr. Stuart was appointed to the inspectorate of Kingston. During his 18 years of service the public Schools of Kingston made marked progress. In his work both as an administrator of schools and as a director and supervisor of teaching, Mr. Stuart was uniformly successful.

On Friday, March 15th, 1929, Inspector J. M. Cole, of Oxford County North, passed away at his home in Woodstock. Mr. Cole had been public school inspector in North Oxford for a period of eighteen years and during that period had rendered splendid service and had won the high esteem of school boards, people and teachers.

Previous to his experience as a Public School Inspector, Mr. Cole had taught in the Public Schools at Woodstock, Holbrook, Burgessville and Norwich, and in the High Schools at Aylmer and Woodstock.

Mr. Edwin Longman was a native of Wellington County and before becoming Inspector for South Simcoe in November, 1912, had successful teaching experience in both public and high schools. His sudden death in his 70th year, on March 22nd, 1929, brought to an end a long, conscientious and able service devoted to the educational interests of this province.

Dr. A. E. Marty, of the Toronto Inspectoral staff, died suddenly in Johannesburg, Union of South Africa, on May 10th, 1929. She was in the latter country on a year's exchange with Inspector J. J. Strasheim, of South Africa. Dr. Marty had been a Public School Inspector in Toronto for a period of ten years, and during that time had taken a leading place—not only in Toronto, but in the province—in educational affairs relating to the elementary schools.

Lieutenant-Colonel J. J. Craig, Public School Inspector for the South Inspectorate of Wellington County, died on May 29th, 1929. Inspector Craig had been appointed an Inspector in Wellington County in 1881. The public schools of his inspectorate are a splendid tribute to his vigorous efforts in the cause of education.

Inspector Craig was also honoured for a number of years by election to membership in the Provincial Legislature, representing Wellington County.

Mr. H. H. Burgess, who was Inspector for East Grey for twenty-seven years, died at his home in Owen Sound on July 14th, 1929. Before accepting appointment as Public School Inspector he had twenty-four years of experience teaching in the public and high schools of the province. Mr. Burgess was devoted to his work and very efficient in it.

Dr. D. A. Maxwell, who had resigned as Public School Inspector in Essex County (South) in 1925, passed away in Kingsville on January 3rd, 1929. He had reached the advanced age of eighty-three years.

In 1878 Dr. Maxwell was appointed as a Public School Inspector in Essex County. During his early years of experience as an inspector he completed the degree of B.A. and LL.B. Throughout his teaching and inspectoral experience he proved himself an educator of marked ability and the schools of his inspectorate were among the best in the province.

Resignations

Mr. E. E. C. Kilmer, B.A., resigned as Public School Inspector for the City of Brantford on August 31st, 1929, after having served the city in that capacity since October 1st, 1908. Mr. Kilmer did much to advance the interests of the public schools of Brantford and took a leading part during his period of office among his fellow inspectors in the cause of education.

Mr. Robert Boyes resigned as Public School Inspector for Division III, Northumberland and Durham Counties, on August 31st, 1929. Mr. Boyes came to his duties as an Inspector on April 1st, 1910, having been a member of the Campbellford High School staff previously. His service was a faithful one and his help to teachers was appreciated.

Mr. Robert Galbraith resigned as Public School Inspector for Wellington County (North) on August 31st, 1929, after an experience of twenty-four years. During that time he gave a vigorous and progressive leadership to his teachers and boards, and the present educational standing of his schools is due largely to his efforts.

Public and Separate School Inspectors Appointed, 1929

The following appointments to the staff of Inspectors were made during the year 1929:—

1. Mr. J. D. Campbell, B.A., Inspector of Academic Classes in the Vocational Schools for the Department of Education, was appointed on July 1st, 1929, to succeed the late Mr. W. I. Chisholm as Assistant Chief Inspector of Public and Separate Schools.

Mr. Campbell had an earlier teaching experience of eight years in public and continuation schools and five years of experience in a high school, four of which were as Principal. In 1913 he was asked by the Department of Education to accept appointment as mathematical master in the Stratford Normal School. In 1920 he was transferred to the staff of the Ottawa Normal School, and in 1922, to the staff of the Toronto Normal School.

2. G. M. Mather, B.A., of Woodstock, to Oxford North, duties beginning April 1st, 1929, to succeed Mr. J. M. Cole, deceased.

3. J. J. Wilson, B.A., of Chesley, to Grey West, to succeed Mr. H. H. Burgess, deceased. Duties began August 1st, 1929.

4. L. P. Menzies, B.A., B.Paed., of Toronto, to Wellington South, duties beginning September 1st, 1929, to succeed Mr. J. J. Craig, deceased.

5. J. A. Gibson, B.A., B.Paed., of Toronto, to Wellington North, duties beginning September 1st, 1929, to succeed Mr. Robert Galbraith, resigned.

6. W. J. Morrison, B.A., of Bowmanville, to City of Brantford, duties beginning September 1st, to succeed Mr. E. E. C. Kilmer, resigned.

7. W. H. Carleton, B.A., B.Paed., of Toronto, to Simcoe South, duties beginning September 1st, 1929, to succeed Mr. Edwin Longman, deceased.

8. A. A. Martin, B.A., B.Paed., of Toronto, to Northumberland and Durham, duties beginning September 1st, 1929, to succeed Mr. Robert Boyes, resigned.

9. H. F. Vallentyne, B.A., of Toronto, to the City of Toronto, duties beginning September 9th, 1929, to succeed Dr. A. E. Marty, deceased.

Additional Inspectors Needed

An additional Separate School Inspector for the Timmins and Cochrane area has already been approved, and the appointment will likely be made for the term beginning in September, 1930. The need for an additional Public School Inspector in this area is becoming more urgent. In these northern areas the inspectors are required to give much help in the matter of outlining school sections, arranging for new buildings and in adjusting assessment and tax problems. And as the distance travelled by each inspector in reaching his schools is great, the number of teachers assigned to each inspector must be fewer than in the counties of Southern Ontario.

York County has five public school inspectors. Each year there is a rapid increase in the number of class-rooms in the suburban area just outside the limits of the City of Toronto. In no part of the province is there a greater need at the present time for an additional public school inspector than in the County of York.

The City of Oshawa has made decision to separate from the County of Ontario for purposes of public school inspection at midsummer, 1930. This step will benefit both city and county.

School Libraries and Supplementary Reading

The great majority of the libraries in the schools, both urban and rural, show deficiency in the number of books suitable for pupils of the junior classes, Forms I and II. As soon as pupils learn to read they should be encouraged to read good books; and these books should be so ready-at-hand and so well chosen by the teacher that the pupil, when finished with the assigned tasks of the class-room, will turn with delight to the reading of the unfinished book in his desk. Pupils should be encouraged also to take books to their homes and to bring to the class any information which they have gained from their supplementary reading bearing on the classwork.

Many high school entrance candidates take splendid standing in the "Tool" subjects (Spelling, Writing, Oral Reading and Arithmetic), but are deficient in the "content" subjects (Literature, History and Geography), largely because they have not read widely throughout their elementary school courses.

The Work of the Inspectors

The chief work of the Inspector is in the class-room with the teacher and pupils. The chief problem of the Ontario Inspector is to keep clerical and administrative duties within bounds in order that an adequate amount of his time may be devoted to the work of the class-room. The Department of Education and the Inspector, working together, must solve this problem in order that major and not minor interests may be most served.

The sympathetic co-operation between teacher and inspector is improving. It is seldom that the teacher now fears or dreads the official visit of the Inspector. The visit is more often looked forward to as the time when school problems may be discussed and solved. The annual reports of both school boards and inspectors bear splendid evidence of the progress the elementary schools have made during the year 1929.

Conference of Inspectors

In February and March, 1929, group conferences of inspectors were held for the second time at six of the Normal Schools. A new feature of the conferences for 1929 was the bringing together at the Toronto Normal School of those inspectors who supervise urban schools only. In the cities the public and separate schools, to a greater extent than elsewhere, offer in their courses all the subjects, both obligatory and optional, of the provincial courses of study. And as a number of the cities have experimented more or less extensively in methods of teaching, in bases of organization and classification, and in school administration, this first conference of urban inspectors showed that a discussion of the best school practices in the various cities was of great benefit.

The informal nature of the inspectors' conferences encourages all to take part in the discussions. These conferences have been most helpful not only to

new inspectors, but also to those of years of experience. The inspectors, both at the time of the conferences and in their annual reports, comment favourably on the great value of these annual meetings.

Consolidated Schools

In the Province of Ontario there are twenty-eight Consolidated Schools, located as follows:—

1. In the Districts (18):

In Kenora District, Quibell; in Rainy River District, Barwick, Burriss and Morley; in Thunder Bay District, Dorion and Nipigon; in Temiskaming District, Charlton, Hudson and Savard; in Parry Sound District, Byng Inlet, Katrine, Nobel, Point-au-Baril and Sundridge; in Haliburton, Gooderham, West Guilford and Wilberforce; and on Manitoulin Island, Mindemoya.

2. In the Counties (10):

In Welland, Falls View; in Lincoln, Grantham; in Wellington, Macdonald; in York, Humber Heights; in Hastings, Tweed; in Addington, Tamworth; in Prince Edward, Wellington; in Leeds, Mallorytown; in Dundas, North Mountain; and in Carleton, Grant.

With a few exceptions, all of the Consolidated Schools provide secondary school education in Fifth Classes, in Continuation Schools or in nearby High Schools. These Consolidated Schools, therefore, are providing educational facilities for the rural districts, in which these schools are located, in most cases remote from towns and cities, comparable with the facilities provided in urban centres.

In a community where a consolidated school has been established the people are unanimous in its favour.

Fifth Classes

For a great many years, Fifth Class work, covering the same field as is covered in the first and second years of the High School Courses, has been included as a part of the regular courses of study in the elementary schools. To-day Fifth Classes are to be found in many communities throughout the Province not served by a Continuation School, a High School, a Collegiate Institute or a Vocational School. The extent and character of the work which is being done by these Fifth Classes are apparent from the following statistics for the school year, 1928-1929. There were 109 Grade A, 90 Grade B and 98 Grade C Fifth Classes. In 623 other schools also, Fifth Class work was taught. In all, there was a Fifth Class or Fifth Classes in no less than 920 elementary schools. There were 2,360 pupils attended Grade A, Grade B, and Grade C Fifth Classes and 3,102 pupils attended other Fifth Classes or a total of 5,462 pupils attending Fifth Classes. From one-roomed schools conducting Fifth Classes candidates passed on 3,504 papers of the Lower School Departmental Examination out of 5,049 papers attempted, a percentage of 69.3. The legislative grants given for Fifth Classes was \$41,323.12. If the total number of Fifth Class pupils in this Province were brought into urban centres for secondary school education it would require twenty school buildings, each accommodating at least 220 pupils, to provide for them; at least 155 teachers would be needed for their instruction and an annual expenditure of \$600,000 would be required to maintain these schools.

School Attendance

Dr. J. B. MacDougall, Chief Attendance Officer, has submitted the following brief reviews for the year on School Attendance and Railway School Cars.

Both rural and urban schools are showing marked improvement in attendance. Obstacles to regular attendance in the former class of school are many and difficult to surmount. But measures such as road improvement, transportation, itinerant teachers and home correspondence are relieving the conditions or furnishing helpful alternatives to regular school conditions. Many rural inspectorates are measuring up almost to urban standards. A marked feature is the new value set by parents, teachers and officials upon school attendance as a factor in school progress. As an evidence of what has been accomplished, the records show that after deducting the number due to increase of population; on the average over 24,000 more children in Ontario are now receiving an adequate education than three years ago. More than 3,000,000 pupil days have been saved in actual attendance. The favourable reaction of this result on school efficiency and on the general progress of the pupils is beyond question. The new system of recording and reporting attendance promises still further to stimulate interest and to improve the standard.

Railway School Cars

The Travelling School Car, which carries the facilities for education and social betterment to isolated settlements along the railways, is improving and extending its service. Boys and girls who could never be reached by ordinary means are brought within the range of education. The principle of self-help which is imposed on them by the very necessities of the system, where a week of intensive study is followed by three weeks of self-dependence in study under the teacher's guidance, is doing much for them in the way of developing originality, initiative and self-reliance. This is quite manifest when by transfer to regular schools they measure their powers against their school mates under different conditions. The service the cars are rendering in the way of educating the non-English in the language, ideals and duties of Canadian citizenship is distinctive. The social benefit in assisting them through reading matter, good music, help in home craft, educational pictures, and in many other ways, is changing the entire life of these isolated communities. An additional car is now under construction for service in the far north-western area of the Province.

Rural School Fairs

Mr. R. S. Duncan, B.S.A., Director of the Agricultural Representative Branch, Department of Agriculture, presents below some comments and statistics relative to the Rural School Fairs held in 1929.

School Fairs, which are a co-operative effort of the Departments of Education and Agriculture, continue to play a worthwhile part among the boys and girls of the rural schools. Year by year, not only the interest of the children and their parents increases, but what is equally important, the School Fairs have a more practical value and more closely link up with the teaching of Agriculture in the schools.

The statistics which follow, for the years 1924 and 1929, are of interest, and indicate the steady growth which is taking place.

	1924	1929
Number of Fairs held.....	507	566
Number of schools taking part.....	4,392	4,831
Number of pupils participating.....	124,138	123,467
Number of entries at School Fairs.....	268,390	310,181

The Ontario Department of Agriculture supplies, free of charge, high quality vegetable seeds and cereal grains, and these are distributed to the boys and girls under the direction of the County Agricultural Representatives. While the Agricultural Representatives are directly responsible for the management of the Fairs held in their respective Counties, the Public School Inspectors give valuable assistance, not only on School Fair day, but also in formulating plans and ideas for improvement. To the rural school teachers is due a great deal of credit for the progress made in the past and the interest that continues to grow.

In some Counties the Public School Inspectors, in co-operation with the Agricultural Representatives, so plan the course of study in Agriculture that it not only supplements the School Fair programme but also co-ordinates with the senior agricultural extension programme in the respective Counties. It is our desire and aim that this will be extended to every County in the Province in the near future.

School Health Supervision

Dr. J. T. Phair, Director, Division of Child Hygiene, Department of Public Health, makes the following comments on the work for the year:—

The Department of Health, in co-operation with the Department of Education, has been attempting during the last two years to demonstrate the practicability of a worth-while type of school health supervision in various combinations of rural and urban municipalities. The areas chosen have been of varying sizes, and all types of combinations have been selected. The co-operation of the Inspectoral and Teaching staff has been, in the vast majority of cases, evident from the start. The interest of the School Boards and local Boards of Health has been easily won in many districts; in others, it is difficult to obtain. The question of cost seems to be the one obstacle impossible to overcome.

It is the opinion of those associated with the demonstrations, that school health supervision is practicable under ordinary climatic conditions. Its success, however, hinges on the ability of the staff employed to maintain a regular, all-the-year-round service, and on the sympathetic co-operation of all those presumably socially-minded people in the community being served. The Department is continuing the demonstrations this year with the hope that it may be possible to evolve some workable plan whereby this desirable adjunct to the educational programme may be extended to the rural and small urban municipalities throughout the Province.

Music and Art

The scheme of grants, as revised in September, 1929, made it possible for the one-teacher rural school to qualify for the grants for the teaching of Music. In a considerable number of the inspectorates special itinerant teachers are teaching music in the urban centres and the nearby rural schools. It is quite evident that many rural people look upon the subject of music as having a rightful place in the courses of study, and with the co-operation of trustees, teachers and inspectors, a rapid extension of the teaching of this subject is expected.

The comparison of grants for the teaching of Music and Art over a two year period, given below, is an indication of the extension of the teaching of these subjects.

Music

School Year	No. of Special Teachers	Grants paid to Teachers	No. of Boards	Grants paid to Boards	Total Amount of Grants
1927-1928.....	117	\$5,164 00	62	\$1,620 00	\$6,784 00
1928-1929.....	142	6,140 00	155	4,635 23	10,775 23
Increase.....	25	\$976 00	93	\$3,015 23	\$3,991 23

Art

School Year	No. of Special Teachers	Grants paid to Teachers	No. of Boards	Grants paid to Boards	Total Amount of Grants
1927-1928.....	97	\$4,050 00	36	\$1,450 00	\$5,500 00
1928-1929.....	98	4,264 00	37	1,526 25	5,790 25
Increase.....	1	\$214 00	1	\$76 25	\$290 25

The Penny Bank

Mr. J. R. Littleproud, Inspector for the Penny Bank of Ontario, has been good enough to submit the following statement regarding the progress of the Penny Bank during the year 1929.

"I have pleasure in reporting not only considerable expansion in this activity for the year but also a greater regularity of the pupils in making deposits in the centres where the Penny Bank has been in operation for some time.

This office has sought to give encouragement to the school savings system as operated throughout the Province by the Penny Bank of Ontario. The chief value of this activity is seen in the development of thrift habits among girls and boys. It serves as a direct contribution to good citizenship which is the main objective of any good school system.

I am pleased to report that new centres for school savings have been opened during the year in Arkell, Arkona, Birch Cliff, Bridgeburg, Brighton, Chippawa, East Windsor, Elora Separate School, Exeter, Fonthill, Fort Erie, Lakeview, Oakridge, Pembroke, Penetanguishene, Port Elgin (Indian School), Riverside, Stamford Tp. S.S. No. 1 and S.S. No. 5, Sarnia (Public and Separate Schools), Tecumseh, Thorold, Thorold Tp. (S.S. No. 2), and Weston Separate School.

There are now 414 schools operating the Penny Bank, with 155,978 pupils participating. The balance on deposit by the children amounts to \$1,290,186.70.

Correspondence Courses

Mr. Neil McDougall, General Inspector, presents the following reviews on Correspondence Courses, Summer Courses and the Interchange of Teachers within the Empire.

In the great Province of Ontario, comprising an area three and one-half times as large as that of the British Isles, with its vast northern districts being opened up for settlement and development, it is not surprising to find many families living in remote places out of reach of any school, and where conditions make it impossible for the present to establish schools. Some three or four years ago the District School Inspectors, after a survey of their inspectorates,

reported that there were many children of school age living in isolated parts of the province so far distant from a school that they were without educational opportunities of any kind. The Minister of Education, impressed with the seriousness of such a position, decided to provide Correspondence Courses for the benefit of those living out of reach of a school. These courses, which were begun on March 1st, 1926, cover the Public School Courses of Study from the Primer to the Fourth Book. Children may, therefore, by home study, proceed as far as the High School Entrance Examination.

Those eligible for admission are (a) children of school age who are so far from a school that they are unable to attend during any part of the year; (b) children who are able to attend school during part of the year but who are unable to attend during the winter months because of bad roads or on account of the school being closed; (c) persons of school age who by reason of physical condition are unable to reach school, but who are physically and mentally capable of doing the Correspondence Lessons; (d) other persons whose cases are considered according to all the circumstances. It should be clearly understood, however, that these courses are not intended to interfere in any way with existing school arrangements; nor are they intended to take the place of schools where such are needed and where conditions make it possible to establish them.

In 1926 the enrolment was 200; in 1927, 400; in 1928, 550; and in 1929 it has reached 800. The persons enrolled are from 6 to 18 years of age—a few being older. These have been placed in the various grades from beginners in the Primer Book to Entrance candidates in the Senior Fourth Grade. The necessary books and supplies are furnished free of charge to each person enrolled, and all expenses in connection with the courses are paid by the Department of Education. A complete set of lessons, based on the books authorized for use in the Public Schools of the province, have been carefully prepared for each grade from Primer to Fourth Book. Two Lesson Assignments are mailed regularly three times per month to each pupil enrolled. Answer sheets and stamped envelopes for the return of the answers are also provided.

The results have shown success beyond all expectations. The pupils have been prompt in the return of their answers and show constant improvement in their work, while the parents have shown a splendid spirit of co-operation. It would appear that the average child will complete the Public School Course as quickly by the Correspondence Courses as he would in a well-conducted school. Already eight of the pupils have passed the High School Entrance Examination. Many letters of appreciation have been received, and it is believed that the Correspondence Courses are destined to prove a great educational blessing to isolated families. Particularly will they be of benefit to pioneer settlers in sparsely settled districts in the northern parts of the province, until such time as conditions make it possible to provide schools.

Summer Courses

The Summer Courses conducted by the Department of Education for the benefit of teachers who desire to improve their academic and professional standing are becoming increasingly popular as evidenced by the constant increase in attendance. In 1929 the total attendance at the various Summer Schools held throughout the province was 3,833, as compared with 3,088 in the previous year. There were 1,018 men teachers and 2,815 women teachers in attendance. No fees are charged those who attend these courses, nor is there any allowance for living and travelling expenses except in the cases of those who served overseas

during the war. The latter receive one dollar per day for the period of the courses. Each year extensions are required in these courses to meet the educational needs of the teachers. In 1929 a course in Art was given at London for the first time and sixty attended, while the Refresher Courses in Science for secondary teachers given at Toronto were extended to include Chemistry, Botany and Zoology. These Refresher Courses are much appreciated.

The attendance at the various courses was as follows:—Agriculture, 295; Art, 265; Auxiliary Classes, 63; Cadet Corps, 67; Commercial, 184; High School Assistants, 38; Household Science, 76; Kindergarten Primary, 267; Manual Training, 55; Middle School, 12; Oral French, 102; Physical Training, 377; Science Refresher, 48; Vocal Music, 191; Upper School, 803; School Nurses, 45; Vocational, 100; English-French, 845.

Interchange of Teachers Within the Empire

Ever since the Imperial Education Conference held in London, England, some five or six years ago, at which a general plan for the interchange of teachers within the British Empire was agreed upon, the number of interchanges has been steadily increasing. For the present school year, 1929-30, thirty-five Public and Separate School teachers from Ontario are on interchange with teachers in England, Scotland, New Zealand, British Columbia and Alberta.

In addition to the teachers in Elementary Schools mentioned in the preceding paragraph, there are also three Collegiate Institute teachers from Ontario on exchange with teachers of Secondary Schools in England and Scotland. These are, Miss Helen Cowie, B.A., of Glebe Collegiate Institute, Ottawa, who is on interchange with Miss Helen M. Blackadder, M.A., of South Hamstead High School, England; Miss Muriel E. Paul, B.A., of Central Collegiate Institute, Hamilton, on interchange with Miss Katherine G. Fulton, M.A., of Neilston Institute, Paisley, Scotland; and Miss Gladys W. Chantler, B.A., of Oakwood Collegiate Institute, Toronto, on exchange with Miss Margaret A. Wilson, M.A., of Rotherham Municipal High School, in Rotherham, England. This is the largest number of interchanges of secondary school teachers that Ontario has had, but each year greater interest is being manifested.

Teachers in Ontario who desire to apply for interchange should write for application forms to the Interchange Officer, Department of Education.

Inspectors' Annual Reports

The following comments are made after reading the General Annual Reports of the Inspectors:—

1. BUILDING OF SCHOOLS:

A number of the inspectors report that rural boards are postponing the building of new schools and the renewal and repairing of the present schools until a decision is made with respect to the Township School Board measure. In some parts of the province the impression has gone abroad that this measure, or any other change, might suddenly bring about the closing of many schools and the building of many new schools of modern types.

It cannot be too strongly emphasized at the present time that the schools belong, and will continue to belong, to the people for the training of their children, and the trustees and ratepayers should carry out any necessary expenditures on buildings with the full assurance that any changes in the courses of study or methods of administration of the schools must take place by growth and adjustment rather than by any sudden throwing aside of the old and taking on of the new.

2. TEACHERS' INSTITUTES:

The Inspectors are unanimous in the opinion that the Teachers' Institute is a very valuable conference for the teachers. Not only has it a social value for them, but it offers excellent opportunities from an educational point of view. It is believed that the most successful conventions are those in which the teachers themselves are responsible for the major part of the programme, with as many of them as possible taking part in it. A very helpful session at some of the conventions is brought about by the division of the members into groups for the discussion of grade topics. Teachers interested in the same or a similar programme of work meet together, present their problems to one another, and receive suggestions which are worth while. At other conventions it has been the regular procedure to specialize each year on one of the subjects in the courses of study for elementary schools. By doing this, more intensive work is done and special help is given on the methodology of that subject. A very interesting number on the programme of several of the conventions has been a debate on a current educational topic. This number generally is very much appreciated by the members of the convention. For a change from the regular programme, every three years or so, the teachers of an inspectorate visit in a body the schools of a large urban centre and observe the work in the class-rooms as well as any special features which may be characteristic of the schools. In addition, the teachers may visit places of historical or general interest.

An opinion which is expressed in many of the inspector's reports, is that the addresses and demonstration lessons given by the speakers from the College of Education and the Normal Schools are inspirational, practical and helpful, and are enjoyed and appreciated by the members of the convention.

3. ARITHMETIC AND GRAMMAR:

It appears to be the opinion of most of the Inspectors of Public and Separate Schools that the academic knowledge of many of the teachers in the subjects of Arithmetic and Grammar is inadequate for the most successful teaching of these subjects. The correction for this lack of knowledge appears to be an extension of the courses in Arithmetic and Grammar now given in the secondary schools and emphasis placed on academic knowledge in these subjects in the second year of the Normal School Course.

4. SCHOOL ATTENDANCE:

It is gratifying to note that the Inspectors generally report that the school attendance of pupils has improved during 1929. Teachers, Courses of Study and the School Equipment may be the best possible; but the efficiency of the schools will remain in direct relation to the regularity of school attendance. This problem in the rural schools continues to be one of the most vital ones.

The present Township School Attendance Officer is doing better work than heretofore. The lack of sufficient support of this officer by many township councils, the appointment of persons in many cases who are not suited to the work, and the preference of many of these officers to be good neighbours rather than efficient attendance officers, are factors preventing the best results.

The Chief Attendance Officer is meeting with success in placing responsibility for good attendance upon parents, teachers and inspectors as well as upon attendance officers. The better recording and checking up of attendance by the Chief Attendance Officer is also bearing results.

General Remarks

Many bodies and organizations throughout the province are giving help and support to the schools. The interest and co-operation of the people in their elementary schools will always be the strongest support which teachers and inspectors may have in their work. And the children respond better in the classroom when there is a wholesome support of the school in the home and among public and welfare bodies.

The co-operation of the Department of Public Health and the Department of Agriculture through their different officials, is much appreciated by those interested in the schools.

I am indebted to the officials who have contributed reviews of their special fields of work in this report, and also to my colleague, Assistant Chief Inspector J. D. Campbell, for his hearty co-operation and assistance.

V. K. GREER,
Chief Inspector.

Toronto, January 31st, 1930.

APPENDIX B

REPORT OF THE HIGH SCHOOL INSPECTORS

It is very gratifying to be able to report another year of continued improvement in the facilities provided for secondary education by the High School Boards of the province. The number of the schools has been increased by five. Two are additional Collegiate Institutes established by existing High School Boards—The Hon. W. C. Kennedy at Windsor, and the York Memorial in York Township. Two others, Ridgeway and Sandwich, were formerly Continuation Schools, and the fifth is a new school, established for French-speaking pupils by the Hawkesbury High School Board. Accordingly, in the fall of 1929, there were in operation sixty-three Collegiate Institutes, and 142 High Schools, and the number of teachers employed was increased by ninety-two, to a total of 2,047.

This expansion in the number of schools was made necessary by a further increase in the numbers of pupils presenting themselves for enrolment in the High Schools; and this increase made necessary, also, improvements in building facilities in many of the High Schools throughout the province. Five entirely new buildings have been constructed, or completed, during the year as follows: The Brockville Collegiate Institute, to replace the old building destroyed by fire, the Hon. W. C. Kennedy Collegiate Institute at Windsor, and the York Memorial Collegiate Institute in York Township; and High Schools at Port Credit and Dundas. In addition to these, a beginning was made towards the new building for the Earl Haig High School in North York Township. In fifteen other schools, new additions, most of them of considerable size, have been under way during the year. The Collegiate Institutes so enlarged are: Barrie, London South, Oshawa, Sault Ste. Marie, Scarboro, and three in Toronto, viz., Malvern Ave., North Toronto, and Parkdale. Besides these, Brantford Collegiate has gained the use of a new gymnasium, and the Glebe Collegiate at Ottawa, four class-rooms, from the construction of adjoining Vocational buildings. The High Schools enlarged are those at Amherstburg, Blenheim, Bowmanville, Burlington, East York, Midland, Thorold and Watford. Stamford High School, also, began the erection of a new wing during the year.

All these buildings have been designed along modern lines and make greatly improved provision for thoroughgoing instruction in the several courses. This movement to provide the best type of accommodations in the High Schools has now reached such proportions that those communities that do not provide such accommodations are a small minority. Of the Collegiate Institutes, only seven out of sixty-three now continue with the old type of buildings. The rest are either wholly new, with the best of modern facilities in most respects, or have been modernized to a greater or lesser extent by fairly recent alterations and additions. In the case of the High Schools, the movement has been fully as remarkable. More than half are either wholly new buildings or have been recently enlarged and remodelled. These, accordingly, are of modern type with standard class-rooms, wide halls and stairs, well-equipped Science laboratories, proper and adequate lighting, steam heating, good ventilation, sanitary toilets, and sufficient provision for library, coat rooms, waiting rooms, teachers' rooms, etc. About half of all the High School buildings now provide, also, an auditorium and a gymnasium.

Many of the sixty-odd buildings which might be classed as old type in design, lay-out and accommodations are, of course, quite substantial in structure and still adequate in size. Accordingly, one would not propose the scrapping of such serviceable buildings and the replacing of them by structures of a modern type. There are, however, quite a number, perhaps twenty, of these that do not meet the local needs at all adequately. In some six or eight cases the Boards are giving very serious consideration to plans for new buildings; and all have, repeatedly, been urged to do so in the annual reports of the Inspectors. To the visiting Inspector, who naturally sees each school in comparison with others, the urgency of the need, and the baneful effects of poor physical conditions are, perhaps, more evident. Who can estimate the extent to which crowded, dilapidated or unsanitary conditions may affect the habits and lives of the pupils? Habits of neatness, orderliness, personal cleanliness, respect for public property, and for others' interests, and even of truthfulness and honesty are more difficult to inculcate in such surroundings. Viewed in this light, poor conditions of school buildings and accommodations have an intimate relation to juvenile delinquency. There are evidences on all hands that School Boards recognize the importance of this question and some Boards have undertaken the remodelling of old buildings, while most, at least, keep the whole school property in good repair. One enterprising Board, last midsummer, spent \$15,000 in overhauling, replanning and redecorating the whole building. By similar action, many a school of the old type could be made thoroughly modern, at least, in heating, ventilating and lighting, in sanitary arrangements (including flush closets and drinking fountains), in hardwood flooring, in provision for cap-rooms, for waiting, lunch, or exercise rooms, for library and teachers' rooms, for well-equipped Science laboratories and even, in some cases, for Assembly Halls.

Special Features of Importance

The Gymnasium.—There was a time when the general conception of a school building was that of four walls of masonry enclosing two or more class-rooms with, of course, the necessary connecting halls and stairs. The class-room is no longer considered the sole and sufficient accommodation for teaching. Among the special features, now accepted, almost invariably, as indispensable, is the gymnasium. Formerly, only Collegiate Institutes were provided with gymnasiums, and then they were usually separate buildings. Now, not only all the Collegiate Institutes, but about half of the High Schools are so provided and, in most cases, the gymnasium is an integral part of the building. A number of the largest schools have separate gymnasia for the boys and the girls, while in most of the others the Assembly Hall is used as an auxiliary exercise room.

For seven or eight months of the school year, regular outdoor exercise during school periods is impossible, and the class-room, crowded with seats, is, at best, a very poor exercise room. The value of well-conducted physical exercises, gymnastics, and games is now universally conceded, not only as a means of making and keeping the body fit, but also as a means of training the characteristics essential to a verile manhood and womanhood. It is a question whether the time has not arrived when a gymnasium should be made an obligatory feature of the accommodations for all High Schools.

The Auditorium.—Another special feature of the accommodations, now fairly generally recognized as essential to an up-to-date High School, is the auditorium. Like the gymnasium, this feature was formerly distinctive of a Collegiate Institute; but, to-day, it is found in almost all the Collegiates and

in about half of the High Schools. Formerly, too, the auditorium was stowed away up under the roof where the space was not otherwise valuable. To-day the attic hall is no longer favoured, both because of its inaccessibility, and of the fire risk; and the modern school makes the auditorium its central feature, on the ground floor, often immediately opposite the front entrance, where it becomes, as well, the community centre. In order to be convinced of the value to a school of an auditorium, one need only visit, in turn, the various High Schools in action and compare those having an auditorium, with those lacking this feature. In any case, the High School Inspectors are unanimously and thoroughly convinced that an auditorium may be made to play a most vital part in the life and programme of any such school.

In those schools which seem to make the auditorium minister most to the welfare of the school, daily assemblies of the whole school are held, lasting for ten or fifteen minutes. The usual routine programme includes a Scripture reading, the Lord's Prayer, a song, the school announcements, and the dismissal. Frequently the school orchestra plays while the school is assembling and dismissing, and the whole exercise is carried out in a very systematic, orderly fashion. These assemblies do much to foster a healthy school spirit, to train the pupils in public speaking, in self-control, in orderly habits, in consideration for others and in respect for authority; and they provide a convenient opportunity for the Principal to place matters of general interest before the whole school at once. Here and there are found features of these exercises worthy of special mention. In one school the recital of the Lord's Prayer is made more impressive by having it chanted by the whole school in unison. One Principal has accumulated a varied collection of choice quotations or of sayings of great men, and some of these are flashed on the screen while the school is assembling. In most schools, the National Anthem has its place on the programme; but one school makes this item most impressive by having the whole school stand facing the Union Jack at the side of the platform while the anthem is sung. In several schools the pupils remain standing until Principal and teachers take their places on the platform. The choice of suitable songs is one of the problems in making these assemblies effective. Many excellent songs are in use; and anyone who would make a collection of the best and publish the same, possibly through the medium of "The School," would be doing a real service to all.

Any statement as to the School Assemblies would be incomplete without some reference to the influence of the hall itself and its decorations. Many of the halls have great beauty of design, frequently enhanced by artistic curtains at the windows and the stage. Others have special mural decorations. Outstanding among the latter are the auditoriums at Jarvis Street Collegiate Institute, and Humberstone Collegiate Institute in Toronto, where well-known artists have painted on the walls scenes and designs of historic or symbolic significance. The unconscious stimulation of successive classes of pupils through this means is incalculable. Regular school assemblies, properly conducted, are most prized by those who have had most experience with them. Surely this, in itself, should highly commend the practice to all others.

The Library-Study.—Unfortunately the large library room or library-study room is a special feature found only in relatively few of the most recently constructed schools, and the number that are making effective use of such rooms is still more limited. Yet no other agency about a school offers greater possibilities of giving a real educational stimulus to the pupils. In a few schools, a beginning has been made, and many more are planning similar lines of action. The ideal towards which these few are working is the establishment of a distinct course

of training in books and how to use them, coupled with the encouragement of wide reading in spare periods. Such a course should be under a well-qualified teacher, who has been trained also in library work and who would preside over the library at all times and conduct the course of training in books and reading with the several forms in turn. One period per week for each form is the usual plan; but at other times, pupils may spend spare periods in the library, preferably to make use of its books, either in general reading, or at special reference work under the guidance of the Librarian.

In smaller schools the library room might be combined with the general study-room, where all pupils having study periods at the same time could be accommodated in the one room. But even in such cases, the services of a specially qualified Teacher-librarian would be necessary to carry out the programme proposed herein. To help to supply the schools with teachers so trained, a library course is being offered by the Department this summer (1930) in Toronto. Circulars announcing the course have been sent to the schools. Other courses will be provided as the need is made known.

The use of the school library as outlined above is far removed from that now common in most of our High Schools and Collegiate Institutes where the school library is housed in a comparatively small room, often locked up during the school session, and made available to pupils only for a few minutes before and after school, when they may apply to the teacher in charge for books for Supplementary Reading. If the Public Library is the "Peoples' University," why should not our High Schools prepare pupils for Matriculation therein? No greater service can be rendered to a girl or boy, than to send him forth from his High School with a taste for good literature, some knowledge of how to find it, and an unquenchable thirst for reading.

High School Inspectors.

Toronto, May 7th, 1930.

APPENDIX C

REPORT OF THE INSPECTORS OF CONTINUATION SCHOOLS

Number of Schools

In the Province of Ontario during the year 1929 there were in operation 221 Continuation Schools. In these schools 479 teachers were employed. In September, two schools—Ridgeway in Welland County and Sandwich in Essex County—became high schools, and two schools—Edgar in Simcoe County and Palgrave in Peel County—were discontinued by their Boards of Trustees. In September, 1929, five new continuation schools were established, namely, Bethany and Enniskillen, in Durham County, Castleton in Northumberland, Douglas in Renfrew, and Millbank in Perth. All these schools were Grade "C," one-teacher continuation schools. At the close of the year 1929, therefore, there were 217 continuation schools in the province, an increase of one over the year 1928.

Accommodations

Not so much activity in building or enlarging schools was shown during the year as in former years, but new school buildings or additions to older buildings were erected in eleven places, Agincourt, Allenford, Alton, Bobcaygeon, Feversham, Harrow, Mount Albert, Powassan, Scudder, Singhampton and Sutton.

Inspectoral Visits

Every continuation school in the province has received at least one official visit from an Inspector during the year. In a number of cases, where the situation seemed to make such action necessary, a second visit has been made. In particular, the Inspectors have endeavoured to visit all newly established schools early in the school year in order to aid the teacher and trustees in organizing the school. Later in the year a formal visit of inspection has been made. Reports to the Minister of Education have been made in connection with each visit of inspection.

In addition to the formal visits of inspection to establish continuation schools, the Inspectors have visited a number of places where the trustees and ratepayers desired information in regard to the best means of providing secondary school education to the youth of the community.

Teachers

The Inspectors are pleased to be able to bear testimony to the faithful, earnest and effective work of the teachers. All continuation schools employing two or more teachers provide four years' high school education for the pupils. It is easily seen that each teacher must teach a wide range of subjects. In order to fit themselves the better for their work large numbers of teachers devote a large part of their summer holidays to study at the summer classes provided by the Department of Education and by the Universities. The improvement in the teaching of special subjects, such as French, Art and Science, during the past few years has been great. This is due largely to the self-sacrifice of the teachers in undertaking study during the usual holiday season.

Many ambitious teachers are also attempting extra-mural work during the year in order to secure a degree in Arts. This is an excellent thing indeed, as the ambitious teacher is usually the best teacher. Perhaps, in a few cases, teachers have attempted to carry too great a load, in attempting the regular work of their profession and carrying on a large amount of University work as well.

Continuation School Situation

Continuation schools are to be found throughout the settled areas of Ontario. Very few small towns, villages and rural centres are now without secondary schools, usually continuation schools. There are, however, townships in a number of counties where continuation schools would prove of value to the community if some form of co-operation among school sections could be secured. The Inspectors feel that a township organization might well meet the need in certain counties. This township organization might be secured through the establishment of Township Boards to have control of primary as well as secondary schools, or to have control of secondary school education only.

When continuation schools were first established, the supporters of such schools hoped to provide opportunities for the training of pupils not only in the usual academic subjects, but also hoped and expected to provide opportunities for training in Agriculture. As the schools are usually situated in rural and small urban districts, it was hoped that there would be a general demand for training the youth of such districts along lines closely connected with the chief industry of the communities. Unfortunately, these hopes and expectations have not as yet been fulfilled. Only a few of our schools provide courses in Agriculture. But of late years the interest along the line of Agricultural teaching has increased. In a number of our schools excellent work has been and is being done. It is hoped that in the near future marked advancement will be made.

G. K. MILLS,
J. P. HOAG,
J. P. COWLES,

Continuation School Inspectors.

Toronto, February 15th, 1930.

APPENDIX D
**REPORT OF THE DIRECTOR OF TECHNICAL
EDUCATION**
1928-1929

PROGRESS DURING THE YEAR

The statistical tables show that the schools made satisfactory progress during the year 1928-29. Compared with the school year 1927-28, the day school enrolment in 1928-29 increased from 20,193 to 23,063, an increase of 14.21 per cent. The number of full-time day teachers increased from 831 to 997, or 19.98 per cent. Two new schools have been opened and a new constituency appealed to. In addition to the natural increase in school population, there was also some increase due to the initial operation of the Adolescent School Attendance Act upon the part of school boards.

Day Schools

The number of day schools or departments in operation during the year was forty-seven, including agricultural, mining and navigation schools. The subjects taught cover a very wide field, extending from a training in such academic subjects as English, mathematics, science, history, and a foreign language, to a broad range of subjects of a technical nature in the metal trades, building and construction, automobile mechanics, drafting, electrical and steam engineering, all phases of applied art and household economics, the latter including cooking, hygiene, dietetics, housekeeping, home nursing, sewing and dressmaking, power machine operating, laundering, millinery and embroidery. In addition a comprehensive commercial course is provided in such subjects as short hand, typewriting and bookkeeping, history, law, economics, geography, banking and correspondence. Emphasis is placed on penmanship, office routine, business forms, accounting and calculating machines.

Evening Classes

A comparison with last year reveals an increase in enrolment from 39,096 to 41,805, representing an increase of 6.93 per cent. The various branches of instruction offer opportunities for education along vocational lines to men and women at every stage of their career. Any course of instruction designed to meet the vocational needs of workers in any field may be organized. Reference to the separate statistical tables compiled is necessary to appreciate how effectively and to what extent this has been carried out. The students who attend vocational night schools are representative of every occupation in the province.

New Buildings

The Port Arthur combined technical and commercial school was ready for occupancy during the year 1928-29, and the whole accommodation was used during the first year. The building is a fine and modern addition to the secondary educational institutions of the community.

The Advisory Vocational Committee of the Board of Education of Toronto replaced a part of the old Jarvis Street Collegiate Institute, and used the addition for instruction in industrial work for pupils of auxiliary classes.

A creditable addition was made to the Collegiate Institute at Brantford and was ready for use in September, 1929. This structure will provide accommodation for technical and household economics classes.

Chatham completed a shop wing which will provide more suitable accommodation for technical work. The addition also included an assembly hall and gymnasium.

In the western district of Toronto a large building was erected to provide two schools, one for technical educational purposes and one for commercial educational purposes. The combined school was completed during the year 1928-29, and was open for enrolment in September, 1929.

Welland completed plans and made a beginning to erect an addition to the high school for technical and commercial work.

A large High School of Commerce under a separate principal was erected adjoining the Ottawa Glebe Collegiate Institute, and was completed during mid-summer. The new school was opened for use in September, 1929.

Plans were approved for a composite school in the Westdale district of Hamilton, with provision for technical, commercial and academic departments.

Oshawa replaced the old front of the Collegiate Institute and erected a new structure intended for commercial and household economics work. A large addition was made to the rear of the main building to take care of technical and industrial work. Satisfactory accommodation was thereby provided.

Sault Ste. Marie commenced the erection of an addition to the shop section and a gymnasium. The new structure will be used for the coming year.

Statistical Information

The following tables show the progress of the Vocational Schools:

DAY VOCATIONAL SCHOOLS

	1922-3	1924-5	1926-7	1927-8	1928-9
Number of full-time teachers.....	286	416	607	660	795

Matriculation Courses for Technical Schools

In previous reports it was stated that the University of Toronto had established matriculation courses for students in technical schools who are candidates for admission to the Faculty of Applied Science or to the Faculty of Household Science.

Recently, the University of Toronto has approved of special entrance requirements to the course in Commerce and Finance for students who are in attendance at and matriculate from a commercial high school or department.

Credits are also given at the Ontario Agricultural College for work done in the vocational agricultural schools, and at Queen's University for work done at the mining schools.

No door now remains closed upon vocational school students.

Appreciation of Apprenticeship Training in Technical Schools

Two letters have been received from construction companies which point out how technical instruction is benefiting the building trades and the apprentices employed in them.

QUOTATION "A"

From P. W. Price, representing Anglin-Norcross, Limited, Contracting Engineers and Builders, Toronto:—

"Regarding special day lessons for apprentices in carpentry and bricklaying, our opinion is that these are very beneficial to the boys.

"We find that they got a great deal out of these classes and came back ready to put it into practice."

QUOTATION "B"

From H. P. Frid, representing The Frid Construction Company, Limited, Contractors and Engineers, Hamilton:—

"The instruction given to the apprentices in these classes held during the months of January and February, in our experience, is a very important part of the boys' training. The boys derive from this training, three things:

"First, they are taught to read plans and really understand what they are trying to learn and do.

"Secondly, by being away from the job and the commercial side of their work, they are taught during these two months the art of their trade which we have found very highly developed in the boys after their intensive training. They come back to the job trying to do high class work.

"Thirdly, our experience has been that they appreciate their employer and try to give all they can to the work.

"Our company has been fortunate with apprentice boys, and last year at the Apprenticeship Competition in Hamilton held by the Canadian Construction Association, our boys were outstanding in their classes and everyone of them came in for some prize."

Changes in Administration Staff

Mr. L. S. Beattie, recently Principal of Napanee Collegiate Institute, was appointed an Inspector of Academic and Commercial Work in the Technical Branch. Mr. Beattie is a graduate in Arts and is a Commercial Specialist. Prior to his appointment as Principal at Napanee, he was a teacher at the Brockville Collegiate Institute. He succeeded Mr. J. D. Campbell, who was transferred from the Technical Branch and was appointed as Assistant Chief Inspector of Public Schools.

F. S. RUTHERFORD,

Acting Director of Technical Education.

Toronto, April 16th, 1930.

APPENDIX E

REPORT OF THE DIRECTOR OF PROFESSIONAL TRAINING

The enrolment at the Ontario College of Education and at the several Provincial Normal Schools in 1929-30 shows a slight increase over that in 1928-29. At the former the total attendance is 608 as against 517, and at the latter institutions 1,257 as against 1,186 in 1928-29.

The Ontario College of Education

In the College of Education the registration for 1929-30 is as follows:

1. In the One-Year Household Science Course.....		17
2. In the High School Assistant's Course:—		
(a) Intra-mural.....	92	200
(b) Extra-mural.....	10	6
(c) July Course.....	14	23
(d) Late Afternoon Class.....	12	10
	128	239
3. In the Courses for Degrees in Pedagogy:.....		367
(a) Number attending Summer Session.....		225
(b) Number attending the 1929-30 Winter Session.....		70
(c) Degrees granted, June, 1929 (i) B.Paed.....		25
(ii) D.Paed.....		3
4. In addition to the above, 24 students are registered in the Librarians' Course.		

The registration in the Courses for Specialists is as follows:

	Intra-Mural	Extra-Mural	Total
Classics.....	9	3	12
English-French.....	12	9	21
English and History.....	22	22	44
French and German.....	15	1	16
French and Spanish.....	6	1	7
Mathematics.....	1	..	1
Mathematics and Physics.....	6	4	10
Science.....	12	9	21
Agriculture.....	2	1	3
Art.....	17	..	17
Physical Education.....	45	..	45
Household Science.....	11	3	14
			211

In the Optional Courses the registration is:

In the First Class Public School Course.....	27
In the Elementary Art Course.....	27
In the Commercial Course.....	62
In the Music Course.....	7
In the Physical Education Course.....	108

The academic standing of the students in the High School Assistant's Course is indicated thus:

B.A. or M.A.....	528
B.A. Sc.....	1
B. Sc.....	3
B.S.A.....	2
B. H.Sc.....	2
B. Com.....	1
	367

Twenty-one students hold degrees from institutions outside Ontario. These may be classified as follows:

University of Manitoba.....	8
University of Saskatchewan.....	1
Bishop's University.....	1
Laval University.....	1
McGill University.....	1
Montreal University.....	3
University of New Brunswick.....	1
Cambridge University.....	1
Glasgow University.....	1
London University.....	1
Oxford University.....	1
University of Louisville.....	1

The increase in attendance as well as in the number of certificated courses at the College of Education renders urgent the need of increased accommodation in lecture rooms, in conference rooms, in library, and in gymnasium. Provision should also be made for a large demonstration room.

To secure smaller classes and more extensive training in Physical Education, Miss H. L. Bryans, B.A., has been added to the staff, and to provide for the new courses in the commercial branches, Major W. G. Benneth, B.A., B.Paed., has been appointed as Associate Professor in Commercial Subjects.

The Provincial Normal Schools

The enrolment of teachers-in-training at the Provincial Normal Schools in the courses for First Class, Second Class, and Kindergarten-Primary certificates, is indicated in the tables following:

FIRST CLASS COURSE

	Male	Female	Total
Hamilton.....	8	76	84
London.....	13	92	105
North Bay.....	5	46	51
Ottawa.....	13	61	74
Peterborough.....	9	37	46
Stratford.....	23	69	92
Toronto.....	19	118	137
Total.....	90	499	589

SECOND CLASS COURSE

	Males	Female	Total
Hamilton.....	5	54	59
London.....	7	62	69
North Bay.....	11	71	82
Ottawa.....	11	98	109
Peterborough.....	11	61	72
Stratford.....	21	60	81
Toronto.....	25	138	163
Total.....	91	544	635

KINDERGARTEN-PRIMARY COURSE

Toronto.....	33
Grand Total.....	1,257

The Normal Model School

In the Normal Model Schools the enrolment for 1929 was as follows:

	Boys	Girls	Total
Ottawa.....	320	250	570
Toronto.....	355	337	692
Total.....	675	587	1,262

Special Courses

At the several Normal Schools special instruction was provided in order that teachers-in-training in the First Class Course might qualify for Elementary Certificates in Art and Physical Training. The enrolment for this instruction was as follows:

ART

	Males	Female	Total
Hamilton.....	6	42	48
London.....	11	59	70
North Bay.....	5	44	49
Peterborough.....	9	27	36
Total.....	31	172	203

PHYSICAL CULTURE

	Males	Female	Total
Ottawa.....	11	37	48
Stratford.....	20	63	83
Toronto.....	19	40	59
Total.....	50	140	190

For the instruction of these special Physical Culture Classes and even more for the systematic physical education of all the teachers-in-training in attendance at the Normal Schools, provision should be made for up-to-date gymnasiums. Teachers above all others should have a thorough physical education, and for this the present gymnasium equipment at the Normal Schools is inadequate. For the work of the Special classes, arrangements have to be made for the use of gymnasiums connected with institutions and schools in the community where the Normal Schools are located.

In 1929 the Normal Schools suffered a severe loss in the removal by death of six members of the service who were prominently associated with these schools:

E. T. White, B.A., D.Paed., died April 6th, 1929. Dr. White was appointed a Departmental Master in the London Normal School in September, 1913.

S. A. Morgan, B.A., D.Paed., died July 11th, 1929. Dr. Morgan was appointed Departmental Master in the Ottawa Normal School in September, 1907, Principal of the Hamilton Normal School in September, 1908, and Director of Professional Training in August, 1919.

S. J. Keyes, B.A., D.Paed., died on August 30th, 1929. Dr. Keyes was appointed a Departmental Master in the Peterborough Normal School in September, 1908, a Departmental Master in the Toronto Normal School in September, 1916, and Principal of the Ottawa Normal and Model Schools in September, 1922.

S. J. Radcliffe, B.A., D.Paed., died on September 2nd, 1929. Dr. Radcliffe was appointed a Departmental Master in the London Normal School in Sept-

ember, 1907, Principal of the London Normal School in September, 1908, and Principal of the Toronto Normal and Model School in September, 1919.

John B. Gatenby died September 3rd, 1929. Mr. Gatenby was appointed Instructor in Music in the North Bay Normal School in September, 1922.

J. W. Emery, B.A., D.Paed., died on November 27th, 1929. Dr. Emery was appointed a Departmental Master in the Stratford Normal School in September, 1908.

These men lived well and worthily, and laboured effectively. They possessed high qualities of heart and mind, were ardently devoted to their chosen profession and did much through their untiring efforts in the cause of Education to promote its advancement.

The vacancies created by the passing of these members from the service made necessary the following appointments:

Mr. White, B.A., B.Paed., was transferred from the Hamilton Normal School and appointed Principal of the Toronto Normal and Model Schools.

G. O. McMillan, M.A., D.Paed., was appointed Principal of the Hamilton Normal School.

F. A. Jones, M.A., D.Paed., was appointed Principal of the Ottawa Normal and Model Schools.

J. A. Bannister, B.A., D.Paed., was appointed Principal of the Peterborough Normal School.

H. L. Bamford was appointed Instructor in Music in the North Bay Normal School.

In addition to these appointments, Miss E. Preston was appointed Instructor in Household Science in the North Bay Normal School, to succeed Miss D. Stephenson, who resigned.

Provisional Certificates Issued

During 1929, provisional standing was granted to applicants from outside Ontario as follows:

Provisional High School Assistants.....	2
Provisional First Class.....	2
Provisional Second Class.....	29
	33

The countries and provinces from which these applicants came are classified thus:

England.....	8	Wales.....	1	Manitoba.....	3
Scotland.....	5	British Columbia.....	3	Quebec.....	1
France.....	1	Alberta.....	2	New Brunswick.....	2
United States.....	1	Saskatchewan.....	4	Nova Scotia.....	1
		Prince Edward Island...	1		

D. WALKER,
Director of Professional Training.

APPENDIX F

**REPORT OF THE PRINCIPAL OF THE ONTARIO
TRAINING COLLEGE FOR TECHNICAL
TEACHERS**

Attendance

From five to ten years ago when many new schools were being established, and the number of trained teachers of vocational subjects was limited, technical school authorities were frequently under the necessity of employing craftsmen who had no professional training. Practically all of these teachers have been afforded opportunity to attend the Training College and become duly certificated.

In recent years there has been a fairly steady influx of new vocational teachers, until now the supply is quite equal to the demand. As the number of new schools to be established in the next five years will probably be fewer than the last five years, not so many new teachers will be needed. Further, experience has shown that the turnover among vocational teachers is not high. So it is probable that the number of applicants for admission to the Training College has become stabilized.

In this situation the desirability of requiring higher standards for admission to the profession should be considered.

Extension Work in Teacher Training

The arrangements made in 1928 for sending periodically a circular letter on some particular phase of the teaching process of interest to evening class teachers was continued during the past year. The letters are intended primarily for teachers who are regularly engaged in some wage-earning occupation during the day time, and who as a rule have no professional training in teaching other than that procured in short extension courses given by the Training College. As the work of the extension course is necessarily brief and intensive, the letters are designed to amplify and to show the application of the principles of teaching taken up in the extension course.

Through lack of time, due to other work being done by the staff, it was found impossible to offer extension lectures in teaching during the winter session of 1929. Arrangements were made, however, in December, 1929, to carry on an extension course in the Windsor-Walkerville Technical School for two days a week during the winter session of 1930. The prospective enrolment is in the neighbourhood of thirty persons, many of whom already hold teachers' certificates. An examination of the qualifications of evening class teachers in a number of centres shows that the proportion of such teachers who have no professional training in the methods of teaching is becoming smaller. The increase in the proportion of trained teachers tends to make the evening class programme more effective.

Specialist Certificate for Vocational Teachers

The summer courses for the Specialist Certificate in vocational subjects attracted a large enrolment, no fewer than forty-six teachers being in attendance. Of these, twenty-six have completed the residence courses for the certificate,

and are now ready to try the required examination in trade skill and knowledge. As there are many vocations represented in this group the arrangements for this examination present some difficulty. It will, however, be necessary to make some provision for giving tests in trade attainments.

Each student in the senior group of the Specialist class was required to make a course of study designed for a particular group of technical school students, such for example as the apprentice groups in the building trades required under the Apprenticeship Act to attend technical schools for a stated number of weeks each year. Members of the group submitted studies that should be very helpful in the new apprenticeship courses. These studies are available for consultation by teachers and school authorities.

Manual Training Specialist Certificates

The second group to take the course of a Manual Training Specialist Certificate finished the work with the session of 1929. Eighteen students completed satisfactorily the required work in cabinet making, wood finishing, and art metal work. The members of this group carried on their activities with energy and enthusiasm. The appeal of this work to the students was such that all worked with the greatest zest the full eight hours a day provided.

As pointed out in my last report the amount of work that should be taken up for this certificate is too much for two summer sessions. Hereafter three summer sessions will be provided for the course.

Domestic Arts Teachers

In providing teachers of shop or vocational subjects in the technical schools the general principle of recruiting them from the trades has been adopted in Ontario. As pointed out in a previous report this method of providing an adequate supply of suitable domestic arts teachers, i.e., teachers of sewing, dressmaking, and millinery, has not proved satisfactory.

Accordingly a special one-year course in Domestic Arts, similar to that offered in Domestic Science, was offered. This course has now been in operation for a sufficient length of time to test its merits in furnishing a supply of suitable teachers of dressmaking. The teachers so provided have measured up well with the other members of the staff, and do such excellent work that it is probable the schools will prefer teachers so trained to those recruited from the trade.

Vocational Guidance Course

The question of making provision in the schools for offering to the students vocational and educational guidance is a live one. It is being discussed both with and without the school system. As vocational schools are specially concerned in providing such assistance to their students the teachers in schools should have some knowledge of the principles of vocational guidance. The Training College has been aware of this need and has made vocational guidance one of the subjects of study for the Ordinary Certificate.

There should be in each school one or more teachers on whom the responsibility for the work chiefly rests. They should be seized with the importance of vocational guidance, well versed in its principles, thoroughly informed of the local situation, and of desirable personality. To provide opportunity for teachers to prepare for such work a special course in vocational and educational guidance has been arranged by the Training College to be taken in summer sessions, and leading to a certificate valid in any school. The course consists of two parts each of which may be completed in one summer session.

Part I.—School Organization and Administration; Economics, Educational Measurements; Educational and Labour Legislation; Sociology.

Part II.—Principles and Problems of Vocational Education; Vocational and Educational Guidance; Surveys, Job Analysis, Plant Studies, etc.; History of Industry.

The first part of the course will be given in the summer session of 1930.

Summer Courses

A striking feature of the work of the Training College is the great interest shown by the teachers of vocational subjects in summer courses. Many of them who have become legally qualified continue to take summer courses of one kind or another in the effort to improve themselves in the work of teaching. This tendency to take improvement courses speaks well for the professional spirit of the teachers, and cannot but be reflected in the efficiency of the service they give the schools.

Enrolment

The enrolment in the Training College for 1929 was as follows:

1. Ordinary Vocational.			
Spring Session	Men	Women	Total
Summer Session	26	8	34
Autumn Session	54	14	68
2. Special Course "A"	7	1	8
3. Ordinary Manual Training:	4	4
Winter and Spring Session	8	8
Autumn	7	7
4. Summer Courses	107	77	184

This statement does not take into account the following classes established during the latter part of the year 1929:—

1 Hard of Hearing Class, Ottawa.

1 Promotion Class, Sarnia.

13 Special Industrial Classes, Toronto.

1 Institutional Class, Toronto.

8 Training Classes—Collingwood, 1; Fort William, 1; Hamilton, 1; Hamilton Separate Schools, 1; Niagara Falls, 1; Sudbury, 1; York County, 2

Allowance must likewise be made for the facts: (1) that a number of classes are operating in hospitals, institutions, forest schools, etc., the teachers of which do not hold auxiliary class certificates and hence do not come under inspection of the Auxiliary Classes Department; (2) that the enrolment of a class at the time of inspection is likely to be lower than the total enrolment for the year; (3) that the two per cent. standard hereafter referred to is based upon averages and is not necessarily applicable to any particular centre.

Extensions

It is generally accepted that two per cent. of an average public school population are so distinctly of the direct-learning type as to be eligible for admission to training, promotion or special industrial classes. From the above table of statistical information it will be seen that great progress is being made among urban centres in the institution of special facilities for the training of this type of child. These advantages are now extended to towns and villages by making possible the formation of Partial Auxiliary Classes in centres where not fewer than four nor more than twelve pupils requiring such special consideration can be selected; the auxiliary group to be augmented by sufficient pupils from a single grade (preferably either junior or senior second) to bring the maximum attendance to from twenty to twenty-four; the teacher to hold an auxiliary class certificate; and government grants toward accommodation, equipment and the teacher's bonus salary to be provided pro ratio to the regular auxiliary class grants in proportion to the size of the auxiliary class group.

In smaller centres and in rural communities it would seem feasible that pupils of the auxiliary class type be classified as such by the teacher and local inspector; that the course of study for such be modified in accordance with the syllabus outlined for auxiliary classes; that teachers-in-training receive a brief course in this work during the Normal School term; and that certain government grants toward equipment be provided.

Teacher Training

All teachers of auxiliary classes are specially trained in a five-weeks summer course. The minimum qualifications of applicants are: (1) Normal School graduation; (2) three years teaching experience; (3) a certificate from their inspector of special aptitude for the work.

Courses are provided for teachers in: (1) training, promotion and special industrial classes; (2) sight-saving classes; (3) lip reading, hard-of-hearing, and speech correction classes; (4) orthopedic, hospital, and sanitarium classes. Refresher courses may also be organized from time to time.

Sixty-two teachers attended the Summer School of 1929, four of whom were from the Province of Quebec and two from the Province of New Brunswick.

Brief courses will be given each year in the Normal Schools of the province, more especially for those graduates who may have to deal with auxiliary type pupils in rural schools.

In the spring of 1930 brief courses on the work of auxiliary classes will be given urban and rural inspectors of recent appointment.

The auxiliary class teachers throughout the province have been organized into seven associations. The monthly or bi-monthly meetings of these groups are well attended and the teachers are stimulated by the (1) discussion of problems, (2) exhibitions of craft work, (3) the study of new methods. Valuable assistance is rendered by the annual O.E.A. meeting and the *Auxiliary Class Teachers' Bulletin*.

The Establishment of Classes

In Ontario, the establishment of Auxiliary Classes is a matter within the autonomy of local school boards. Advisory assistance, free surveys and grants equivalent to one-half the excess cost of education are provided by the Government.

Upon receipt from a school board of a request to establish a class in a new centre the Department assists in the conduction of a preliminary survey. Record forms are supplied the teachers and school nurses of the area and instructions given as to their use. A continued confidential and sympathetic study of the child is made. The teacher reports on the pupil's educational history, class standing and school characteristics; the school nurse and health officer on his medical history, health conditions, home environment and heredity. A psychometric specialist then gives the child a Stanford Binet examination. All three reports are confidentially considered by a local auxiliary class board which consists of the Public or Separate School Inspector, the School Principal, together with a health supervisor. With the approval of the Auxiliary Classes Inspector a sufficient number of candidates are selected to constitute a class. When a class has once been established in any centre, its continuance and the organization of other classes are left in the hands of the local school authorities, subject to the approval of the Inspector of Auxiliary Classes.

It will be seen that the selection of pupils is based upon the broadest possible considerations. No one instrument of examination is deemed sufficient in the diagnosis of a case. A rapidly growing knowledge and a rapidly widening tolerance compel the recognition of many factors and many standards in education. In the case of children, requiring the educational facilities afforded by training, promotion, and special industrial classes, the application of such terms as subnormal, mental deficient, etc., are reminiscent of an age of educational fanaticism and pedantic snobbery. The low scores obtained by these pupils on a Binet Simon examination have a negative significance only. They tell us that these children cannot *indirectly* through the study of book symbols and the apprehension of theory, learn to control behaviour. Such children are essentially *direct learners* acquiring control of behaviour through direct contacts with experience. It is hoped that the term *direct learners*, instead of an offensive terminology, will be generally employed to designate pupils of this type.

The Conduction of Classes

Since auxiliary class pupils have been segregated from the grades because of their inability to make progress under ordinary school conditions, modifications in class organization, methods of teaching or the subject matter of instruction became necessary.

In classes made up of physically handicapped children, who later may pursue a collegiate or university education, the ordinary public school courses of study are followed. Schoolroom organization and methods of instruction are adapted to the pupil's special need and to the conservation of his health. In training, promotion and special industrial classes for children of the direct-learning type the following modifications of usual schoolroom procedure have been deemed advisable.

(1) Since these pupils will never proceed to High School Entrance, the horizontal system of classification and promotion by grades has been superseded by a vertical system of classification and promotion by subjects whereby the pupil's progress is kept at a maximum, his special aptitudes developed, and his special weaknesses given more adequate attention.

(2) Certain phases in the curriculum, which require abstract symbolic processes of thought or which are merely foundational to more advanced courses of study and have but little practical application in ordinary life, are replaced by more realistic aspects brought down from senior grades. Thus in Arithmetic, simplified processes of estimating interest, taxes, trade discount, insurance premiums, etc., have been brought down from the course of study in Grade 8 and substituted for common measure and multiples and cancellation in Grade 6.

(3) Since this pupil learns largely by direct rather than by indirect processes, a fair share of his school time is devoted to craft work, whereby he gains control of behaviour through direct response to actual situations. Reading, Arithmetic, Geography, Civics, etc., are taught almost exclusively by objective methods.

(4) Since conduct with these pupils is largely a matter of direct rather than considered response, the development of moral, social and vocational habits and attitudes constitutes an important part of their education. Explicit rather than incidental training is provided and a system of classifications and promotions in various phases of social efficiency, similar to ordinary promotions in academic and craft work, provide an incentive toward improvement.

(5) Vocational guidance, training and placement are prominent factors in the educational programme of senior pupils.

Dr. Sinclair's Retirement

In September, 1920, on the occasion of the appointment of Dr. Helen MacMurchy to the position of Chief of the Division of Child Welfare, Health Department, Ottawa, Dr. S. B. Sinclair (formerly Vice-Principal of the Ottawa Normal School and latterly Dean of the Teacher Training Department, Macdonald College, Quebec), was transferred to the vacant position of Inspector of Auxiliary Classes. Bringing to the work a rich background of educational experience and the considered thought of a widely recognized author in the field of educational psychology, he was instrumental in the rapid establishment of auxiliary classes throughout the province and the organization of their administration upon a sound basis. His many friends and admirers will be glad to learn that since Dr. Sinclair's retirement in the summer of 1929 he has been associated with the Nova Scotia Department of Education in the extension of auxiliary class work throughout that province.

H. E. AMOSS,

Inspector of Auxiliary Classes.

Toronto, February 24th, 1930.

APPENDIX II
REPORT OF THE INSPECTOR OF ELEMENTARY
AGRICULTURAL CLASSES

PUBLIC AND SEPARATE SCHOOLS

Agricultural instruction is given in the Public and Separate Schools to the pupils of Forms III and IV, where local School Boards decide to carry on such classes, as the subject is optional.

A steady increase in the number of schools undertaking this work is noted year by year, as may be seen by the table given below:

Year	No. of Schools	Year	No. of Schools	With School Gardens	With Home Gardens
1903.....	4	1914.....	264	208	56
1904.....	7	1915.....	407	222	185
1905.....	6	1916.....	585	324	261
1906.....	8	1917.....	989	466	523
1907.....	2	1918.....	1,020	588	432
1908.....	14	1919.....	1,408	618	790
1909.....	16	1920.....	1,648	702	946
1910.....	17	1921.....	1,804	690	1,114
1911.....	33	1922.....	2,047	796	1,251
1912.....	101	1923.....	2,288	843	1,445
1913.....	159	1924.....	2,285	831	1,454
		1925.....	2,509	783	1,726
		1926.....	2,802	852	1,950
		1927.....	3,193	981	2,212
		1928.....	3,595	1,059	2,536
		1929.....	3,952	1,077	2,875

One hindrance to the development lies in the difficulty in securing qualified teachers. Legally qualified teachers may be obtained from two sources:— Teachers may secure Elementary certificates in Agriculture by attending two summer sessions of five weeks each, either at the Ontario Agricultural College, or at Kemptville Agricultural School.

Secondary Schools

Secondary schools include Collegiate Institutes, High Schools, Continuation Schools and Form V in Public and Separate Schools. The subject is optional and may be carried on under one of the three following schemes:

(1) Elective classes offered as a four-year course, and may lead to Junior Matriculation.

(2) Department of Agriculture under the High Schools Act.

(3) Department of Agriculture under the Vocational Education Act.

The following schools are now carrying on under the scheme indicated in (1) above:

Collegiate Institutes—

Barrie, Belleville, Brockville, Clinton, Cobourg, Cornwall, Fort William, Goderich, Ingersoll, Kitchener, Lindsay, Napanee, Perth, Picton, Port Arthur, Renfrew, Smith's Falls, Strathroy, York County-Runnymede, York Memorial.

High Schools—

Amherstburg, Beamsville, Bowmanville, Bracebridge, Burlington, Cayuga, Dundas, Dunnville, Elmira, Essex, Fergus, Flesherton, Fort Frances, Haileybury, Iroquois, Kincardine, Kingsville, Leamington, Listowel, Madoc, Midland, Mitchell, Nepean, New Liskeard, Niagara Falls South, Norwich, Oakville, Petrolia, Port Perry, Ridgetown, Saltfleet, Scarborough, Shelburne, Smithville, Thessalon, Uxbridge, Waterdown, Watford, Whitby, Williamstown, Winchester.

Continuation Schools—

Acincourt, Arkona, Coldwater, Comber, Drayton, Drumbo, Fenelon Falls, Ilderton, Jarvis, Kinmount, Lobo, Lynden, Lyndhurst, Milford Bay, Mindemoya, Mount Brydges, Mount Pleasant, Pakenham, Princeton, Ridgeway, Sparta, Swansea, Thamesford, Thedford, Thornbury, Thorndale, Wheatley, Wooler.

Public and Separate Schools with Form V—

S.S. 7, Biddulph; Hesson, R.C.S.S. Britton, R.R. 2; Walkerton, R.C.S.S.; R.C.S.S. 3, Mara; R.C.S.S. 4, Wellesley.

The following schools are giving instruction in Agriculture in (2) above: Drayton, Elmira, Listowel, Mitchell, Port Perry, Wheatley and Whitby.

Under (3) above are the following: Beamsville High School, Renfrew Collegiate Institute, Ridgetown High School and St. Thomas Collegiate Institute.

The schools providing Vocational Agricultural Education are producing good results. The boys attending the classes are practically all farm boys who return to the farm. The following report from the Renfrew Collegiate and Vocational School is given by Mr. Throop, the teacher of Agriculture. This report represents the situation in all of these schools.

1924-25—Total number of students, 12—

Farmers' sons, 7. At present 6 of these are farming in Renfrew County, and one has purchased a farm near Napanee.

Non-farmers, 5. At present these are in the following occupations: 1 barber, 1 baker, 1 in automobile factory in Detroit, 1 in factory in Renfrew and 1 working for construction department, C.P.R.

1925-26—Total number of students, 20—

Farmers' sons, 7. At present 5 are farming in Renfrew County, 1 clerking, 1 garage mechanic.

Non-farmers, 13. At present 1 master weaver, 3 garage mechanics, 1 photographer, 1 manager, A. & P. Store, 1 foreman railway construction, 1 undertaker, 2 machinists, 1 auto factory Detroit, 1 printer and 1 graduating this year from O.A.C.

1926-27—Total number of students, 18—

Farmers' sons, 11. At present 10 farming in Renfrew County, 1 clerk.

Non-farmers, 7. At present 1 garage mechanic, 1 sign painter, 2 machinists, 2 millhands, 1 continuing to Matriculation.

1927-28—Total number of students, 28—

Farmers' sons, 18. At present 16 farming in Renfrew County, 2 continuing to Matriculation.

Non-farmers, 10. At present 3 continuing to Matriculation, 1 baker, 1 painter, 2 machinists, 1 scaler, 1 carpenter, 1 employee on construction of Bell Telephone Co.

Training of Teachers

Two summer sessions of five weeks each are given at the Ontario Agricultural College and at Kemptville Agricultural School. At the Ontario Agricultural College the courses lead to the following certificates:

- (1) An Elementary certificate;
- (2) An Intermediate certificate;
- (3) A Specialist's certificate;
- (4) A certificate in Farm Mechanics.

At the Kemptville Agricultural School is given only that which leads to an Elementary certificate.

An Elementary certificate in Agriculture applies only to Public and Separate Schools. The other certificates are for High School teachers.

A Specialist's certificate in Agriculture may also be obtained by the holder of a B.S.A. degree who completes a year's attendance and passes the examinations at the College of Education.

The following tables show the attendance at the summer courses:

Attendance at the Ontario Agricultural College Summer Courses in Agriculture

Normal Schools

Instruction in Agriculture is given in each of the seven Normal Schools with a view towards fitting the teachers-in-training for teaching the subject rather than for furnishing a fund of Agricultural knowledge.

The Instructors in these Normal Schools hold at least Intermediate certificates in Agriculture and they are experienced and competent.

Practically the same course in Agriculture is given to those teachers-in-training for First Class as for Second Class certificates.

Comments from Trustees and Others

The following statements taken from the annual reports submitted to the Department of Education, indicate to some extent how the subject is appreciated by those actually concerned.

S.S. No. 2, Yarmouth, Elgin County.

There seems to be a tendency on the part of the parents, who are engaged in Agricultural pursuits, to belittle their privileges and opportunities. This attitude has the wrong influence for the good of the county.

Agriculture is the basis of all true wealth and prosperity. Let us illuminate the oldest and best vocation known to man.

H. GORDON SMITH, Secretary.
I. M. BINNS, Teacher.

S.S. No. 6, South Walsingham, Norfolk County.

Concerning Agriculture, I think it is a splendid subject to take up in the schools, especially rural schools.

FRED A. BROWN, Chairman.

S.S. No. 4, South Gower, Grenville County.

We think Agriculture is a benefit to the Courses of Study. In this school the children are very interested in this subject. They apply their knowledge of the garden work in their gardens at home after leaving school.

P. J. MCGAHEY,
MAYME MCGINLEY, Teacher.

S.S. Nos. 8 and 20, Charlottenburgh, Glengarry County.

I have found Agriculture well worth the time spent on it and, also, I have found the pupils have taken a keen interest in this subject.

DONALD HOPE,
M. J. MCKAY,
DONALD A. GRANT, } Trustees.
JESSIE B. CLARK, Teacher.

Port Perry Public School, Port Perry.

We find that Agriculture is very helpful in our school. It interests the scholars in learning how to do things for themselves, and the competition at the School Fair makes them alert by trying to do and make things better. It also interests the parents.

GEORGE E. DAVEY, Chairman.
GERTRUDE V. STONIN, Teacher.

S.S. No. 3, Leeds and Lansdowne, Leeds County.

In reference to Agriculture taught in our school, I would say the children seem very enthusiastic about it. On visiting the school I was surprised at the knowledge the children had on the subject.

It should be very helpful to them as it is a general knowledge that they might not have opportunities of getting in any other way.

LLOYD GREEN, Secretary.
MITA S. DAVIS, Teacher.

J. B. DANDENO,

Inspector of Elementary Agricultural Classes.

Toronto, December 31st, 1929.

APPENDIX I
REPORT OF THE
PROVINCIAL SCHOOL ATTENDANCE OFFICER

A threefold object is to be achieved by proper attendance enforcement:—

- (1) to protect the lax attender from the handicap of ignorance and inefficiency;
- (2) to safeguard the faithful attender from impairment of his own life chances through enforced association with less faithful class mates;
- (3) to inculcate in all pupils in their plastic years habits of promptness, regularity and dependability which may function more fully in social and civic efficiency in the sphere of the larger life.

These aims are not to be lightly evaluated in the total scheme of educational effort. They postulate the underlying principles apart from which any system of state-wide education, however well appointed, must largely prove a failure. It must bring within its compass the entire body of prospective citizens. It must not allow the few to lie fallow and unfurnished for life themselves, and indirectly to slow up the general pace and drag the masses down to lower levels of efficiency. It must remove all casual obstacles and leave the school unhampered to devote itself to its real task of training the youth of the land as a whole for the higher ends of all-round citizenship.

To lay the foundation in as full a complement of children day by day as possible,—this the attendance forces have set out to accomplish in a thorough way. The result of their efforts in the past decade is shown in the following table:—

TABLE I
Comparative Statement of Increase in Enrolment and Average Attendance for the ten-year period 1919-1928

	Enrolment		Average		Per cent. of Average to Total Enrolment		Per cent. Increase
	1919	1928	1919	1928	1919	1928	
Public Schools.....	471,729	537,786	308,708	384,903	65.44	71.57	6.13
Separate Schools.....	74,833	103,342	49,289	74,944	65.86	72.52	6.66
Continuation Schools.....	5,126	9,843	3,955	8,161	75.37	82.91	7.54
High Schools and Collegiate Institutes.....	33,036	57,110	26,816	49,455	79.72	86.60	6.88
Vocational Schools.....	2,199	23,177	1,764	18,228	80.21	78.65	1.56
Totals.....	586,923	731,258	390,532	535,691	66.54	73.26	6.72

The above table presents some significant facts:—

1. In the ten-year period the enrolment of elementary schools has increased by 94,566, or 17%, whereas the secondary school enrolment shows 49,779, or a 123.3% increase. This indicates the shift in the tidal flow toward secondary education.

2. The percentage of increase on the average is 6.39 for elementary, and, apart from vocational schools, 7.21 for secondary schools. This means that on the basis of average attendance over 35,000 more pupils per annum are receiving an adequate elementary school education than ten years ago, exclusive of the number due solely to increase in population.

Progress in Elementary School Attendance

The past ten years is a significant period in the movement of education from two points of view:—

1. It follows directly the close of the disintegrating period of the Great War. An analysis should reveal what education has accomplished side by side with other forms of peace re-construction.

2. It comprises the first decade of controlled attendance under the new Attendance and Adolescent Attendance Acts. The facts are shown in the following figure:—

FIGURE I

CURVE OF PROGRESS IN ATTENDANCE,—DISTRICT AND COUNTY RURAL SCHOOLS AND ALL URBAN SCHOOLS

A-A. Percentage of average to total enrolment 1919-1928,—District Rural Schools.

B-B. Percentage of average to total enrolment 1919-1928,—County Rural Schools.

C-C. Percentage of average to total enrolment 1919-1928,—All Urban Schools.

a-a, b-b, c-c, Corresponding percentages based on relation of Actual to Possible Aggregate.

The following facts emerge from a study of the Figure:—

1. All classes of schools have registered an appreciable increase in attendance—District Rural Schools, 14.59 per cent and 7.24 per cent. in relation (a) to total enrolment and (b) possible aggregate; County Rural Schools, 7.26 per cent. and 4.94 per cent., and Urban Schools, 4.76 per cent. and 3.67 per cent. respectively, the District Schools showing the greatest improvement.

2. The spread between the three classes of schools is steadily diminishing as they rise toward the maximum efficiency.

3. The schools have not only recovered the balance as compared with the conditions before the War, but have out-distanced all previous achievements. For 1913 the average attendance of all schools was 64.63 per cent. of the enrolment; in 1928 it had risen to 72 per cent.

The curve for urban schools and for county rural schools seems to be stabilizing at 70 to 75 per cent. on the basis of total enrolment. It may be that the handicaps with which pupils have to contend under present conditions, such as the prevalence of epidemics, defy unaided effort to surmount them. Betterment lies along the line of the extension of Public Health and Welfare work, and the provision of facilities for education beyond the range and content of the present academic system.

Losses Due to Irregularity

Through a cross-section survey of the province, an estimate of losses due to irregularity classified under standardized causes has been made. The comparative conditions as between urban and rural schools are shown in the following figure:—

CODE: P—Privation; PN—Parental Neglect; PO—Physical Obstacles; I—Illness; HH—Home Help; UR—Unclassified Reasons; T—Truancy.

FIGURE II

DIAGRAM SHOWING LOSSES DUE TO IRREGULARITY IN RURAL AND URBAN SCHOOLS UNDER STANDARDIZED CAUSES

NOTE.—Black columns—Rural Schools. Hatched columns—Urban Schools.

In both urban and rural schools the outstanding source of loss is illness, the urban exceeding the rural losses by more than 20 per cent. Epidemics have been frequent and widespread. Because of its compactness, the community centre suffers more than the dissociated homes of the rural area, and this fact registers in attendance losses. Home help as a cause of absence reverses the conditions. Seasonal pressure on the farm is responsible for drafting the grown child from the school to fill the breach, and the rural school shows excessive loss due to home employment. Privation and truancy stand at the opposite end of the scale with merely nine cases and one case per 1,000 due to privation, and four and two cases per 1,000 due to truancy in urban and rural schools, respectively. The total loss per pupil per year is about sixteen days for rural schools and twenty days for urban schools. This gives an approximate loss of 4,000,000 days for rural and 8,000,000 days for urban schools, or a total loss of 12,000,000 days per year for the entire province.

The New Attendance System

In order to function effectively, an attendance system must have a proper foundation in Law and Regulation as a working basis, a clear definition of duties of the various officers in charge, and a close co-ordination of effort in parent-teacher-attendance officer control. This the newly devised system aims to achieve. The teacher holds the key position. He is the nerve centre of the active organization. He collects the absentee data with annexed reasons, lists the losses, sifts out the needy but curable cases day by day and sets the attendance forces in operation by way of effecting a prompt and, as far as possible, permanent cure. The tenets of good business practice must be applied so that each loss will be followed up to a conclusion, the leak stopped if possible, and the overhead cost of absence reduced to a minimum. To this end a complete recording and reporting system has been devised with a view to bringing the facts of loss into focus, concentrating on necessary cases only and reaching a remedy with the least possible expenditure of time and effort. The system already gives promise of valuable results both in practical attendance work and in the collection of helpful statistics for use of Public Health and Social Welfare organizations in co-operative service.

TABLE 2

Comparative Statement of Enrolled Adolescents, 1927 and 1928

	Form I	Form II	Form III	Form IV	Form V	Totals	
						1927	1928
Elementary Schools, 1927.	680	2,174	11,935	35,597	3,589	53,975	
Elementary Schools, 1928.	664	2,228	12,572	37,124	3,847		56,435
	1st and 2nd years		3rd and 4th years		5th year		
Secondary Schools, 1927.	31,136		7,189		176	38,501	
Secondary Schools, 1928.	33,189		8,284		197		41,670
						92,476	98,105

TABLE 3
Comparative Statement of Employed Adolescents, 1927 and 1928

	Home Permits		Employment Certificates		Totals	
	1927	1928	1927	1928	1927	1928
Rural Schools.....	501	511	381	437	882	948
Urban Schools.....	885	1,026	4,138	4,207	5,023	5,233
	1,386	1,537	4,519	4,644	5,905	6,181

Table 2 shows an increase of 5,629 enrolled adolescents in the year 1928 over that of 1927. According to life tables, 1,700 of these may be accounted for through increase of population, so that the balance, viz., 3,929, must be credited to improved attendance supervision. Of the total of 98,105 adolescents enrolled in 1928, 6,181 were granted school exemption, or 6.3 per cent. of the total. This is practically identical with conditions in 1927, which show a percentage of 6.4 of the adolescent school attendance. The figures prove that care and good judgment are being exercised throughout the province in the administration of the exemption clauses of The Adolescent School Attendance Act since only 6 per cent. of the enrolled adolescents, or 1 per cent. of all pupils of compulsory school age are released from school under working concessions.

TABLE 4
Part-time Classes for Adolescents, 1928 and 1929

	Teachers		Enrolment		Total
	Full Time	Part Time	On Home Permits	On Employment Certificates	
Toronto:

Hamilton.....	7	1	167	534	701
Totals.....	18	37	506	1,988	2,494

In addition to the above named centres, Brantford, Galt and Guelph have classes in operation since September, 1929. These classes aim to extend the general education of pupils who, under conditions of financial pressure, or other conditions beyond control, are drafted into the working world, and further to help fit them for the demands of life by training in hand work closely co-ordinated with their occupational tasks. All classes are under capable teachers of special aptitude for the work and are proving eminently effective in this special form of co-operative training.

School Attendance and Crime

A by-product of school attendance, not to be ignored, is the protection of the state by placing proper safeguards at the threshold of life against those slighter defections during school years that open the way to anti-social misdemeanours and crime. *Facilis est descensus averno* is a truism,—dilatatoriness, indolence, delinquency, crime, are easy stages in the downward course. During the past two years a complete census of rural school attendance delinquents has been made and the entire list is card-indexed and classified according to districts in the central office. A similar plan is under way for urban schools. By careful checking and follow-up work, organized effort is busied in stopping the by-wash of the school stream into possible channels of delinquency and crime, and thus is making substantial contribution to the building of well-ordered society.

TABLE 5
Judicial Enforcement of Attendance, 1928

	Number of Informations laid	Number of Convictions			Total Convictions
		1. Re illegal employment of children under 14	2. Re illegal employment of adolescents	3. Re Parental negligence	
URBAN SCHOOLS:					
In Districts	53	..	5	12	17
In Counties	620	6	5	66	77
RURAL SCHOOLS:					
In Districts	12
In Counties	55	8	15	2	25
Totals for 1928	740	14	25	80	119
Totals for 1927	580	30	10	61	111

This table reflects the practical principle that underlies attendance control, viz., that legal enforcement should be used only when other available means fail. For the entire province, only 740 complaints were laid, and out of this number only 119 convictions were registered, or 16 per cent. of the total. Out of an enrolment of 502,891 pupils of compulsory age, only 1.4 infringements of the Act for every thousand pupils had to be referred to the Courts, and only about one per cent. of these issue in convictions on the count of parental negligence. In many instances the case is brought into court for tactical reasons. The review under a thoughtful judge gives him a chance to emphasize the ethical points in the case. Parental responsibility is stressed, and suspended sentence under promise of improvement or under surveillance of a probation officer acts as a sufficient deterrent without the onus of a penalty.

The splendid service of the Children's Aid Society, the Big Brothers, Big Sisters, Neighbourhood Workers, Home Visitors, Service Clubs, and other social and benevolent organizations assists greatly in solving refractory cases and by their self-denying co-operation many otherwise hopeless maladjustments in the school and social order are rectified and the children saved for wholesome citizenship.

J. B. MACDOUGALL,

Provincial School Attendance Officer.

Toronto, December 31st, 1929.

APPENDIX J

**REPORT OF THE
ACTING INSPECTOR OF PUBLIC LIBRARIES**

The death on September 27th, 1929, of Mr. W. O. Carson, Inspector of Public Libraries for the Province, and head of this branch of the Department, caused sincere regret to his associates and to librarians generally. Mr. Carson had been engaged in library work for a quarter of a century. Appointed librarian of the London Public Library in 1904, he was chosen Provincial Inspector in 1916, identifying himself henceforward with the various interests and movements which during the past fifteen years have accompanied the development of this branch of education on the continent. He was President of the Ontario Library Association in 1914 and was a frequent attendant at the annual meetings of the American Library Association. At the time of his death he was a valued member of their Board on "the Library and Adult Education", "the Curriculum Study Advisory Committee of the Board of Education for Librarianship", "the Committee on Legislation," and was the only Canadian representative on these committees. He was also an elected member of the Council of the American Library Association.

Summary

At the end of 1928 there were 215 free public libraries and 301 association public libraries on the official list. During 1929 there were added the Danforth Branch of the Toronto Public Library, and the South Branch of the Walkerville Public Library to the list of free libraries, and Alvinston, Bruce Mines, Fulton and Oil Springs to the association public libraries, thus bringing the number of libraries in Ontario at the end of December, 1929, to 521, Toronto having combined two branches in one.

General Progress

A steady progress has been maintained in all branches of library activities.

- (1) The circulation of books has shown an increase, over ten million five hundred thousand books having been circulated in 1928.
- (2) The increase in the amount expended on books in 1928 in comparison with the previous year is over \$19,000.
- (3) Larger amounts have been earned in Government grants.
- (4) More libraries have been visited and given assistance.
- (5) The travelling libraries show a slight increase over last year.

It is not the intention in this report to enlarge on the problems that are facing the libraries of the Province, but to give in a concise form the outstanding events of the past year.

Amendments to the Public Libraries Act

The Public Libraries Act was amended during the 1929 session of the Legislature. There were two amendments, as follows: (1) Section 29 of the Public Libraries Act is amended by adding thereto the following subsection: "The provisions of the Municipal Act as to taking land compulsorily and making compensation therefor, and as to the manner of determining and paying the

compensation shall *mutatis mutandis* apply to the public library board, and to the exercise by it of the powers conferred by this section, and where any act is by any of such provisions required to be done by the clerk of the municipality, or at the office of such clerk, the like act shall be done by the secretary of the board, or at his office as the case may be."

(2) Subsection 1 of section 39 of the Public Libraries Act is amended by striking out the words "seventy-five cents" in the fifteenth line and inserting in lieu thereof the figures "\$1."

New Library Buildings

The village of Osgoode, which is situated about twenty miles south of Ottawa, and which has a population of about eight hundred, in May of last year erected a small library building, the material used in construction being art stone with cement foundation, the finishings British Columbia fir. The actual cost of the materials was about eight hundred dollars, but a great amount of time and material were donated, so as a result Osgoode has a building worth about fourteen hundred dollars.

The local Women's Institute was instrumental in having the work started and the building is a distinct addition to this beautiful village.

Tobermory, a fishing village at the peak of the Bruce Peninsula, has become the possessor of perhaps one of the most unusual library buildings in Ontario. This was made possible by the generous gift of Mr. Henry E. Bodman and Mr. Dabock of Detroit. Land was purchased in the centre of the village and a log cabin 24 feet x 36 feet erected. It has thick stone gables built from the rock for which Tobermory is famous. The ceiling is of British Columbia fir, two inches thick, tongued and grooved, and is supported by stout old-fashioned cross-beams. A large fireplace at one end of the room is constructed of rugged stone, and is ideal for the fisher folk of the village to sit around and read during the long winter evenings. The library furnishings were also supplied by the benefactors. The chairs were made by the Chippawa Indians on the Saugeen Reserve. All the furniture is in keeping with the architecture of the building. The building, ground and furniture were deeded to the municipality as a library and reading room, without reserve. The library is now operating as a School Section Library under Part I of the Public Libraries Act.

The Danforth Branch of the Toronto Public Library system was opened for service on November 23rd, 1929. It is situated at 701 Pape Avenue, near the corner of Danforth. The building has a frontage of 40 feet by a depth of 105 feet, and is of English architecture. The appropriation received from the city to cover cost of site and building was fifty thousand dollars. The ground floor is devoted to adult books and reading room, and the first floor is given up to juvenile readers. A small room at the rear of the first floor is used as a study room, the brick fireplace, small chairs and pictures on the wall giving it a cozy appearance. The architecture and inside arrangements are distinct from the usual type, and it seems to answer the modern demand in a library building.

Travelling Libraries

One of the needs of this branch is more space for the travelling libraries. The system is expanding yearly, yet the compilation of the lists and the assorting of the cases is largely confined to what can be accomplished in one of the vaults, consequently a large number of the books have to be stored in the basement. We are hoping that additional space will be given for this worth while project.

Library Assistance

Visits were made to a number of libraries that had not been in active operation. In every case the library was reorganized, and in two instances within a few weeks after the reorganization the association was taken over by the Council and the necessary by-laws passed making them free libraries under Part I of the Public Libraries Act. Assistance was also given to a number of libraries in cataloguing and classification.

It is the wish this year to cover to a great extent by visits, all of the smaller libraries in the Province, and more particularly those that have not reported for sometime. It is "missionary" work to a great extent, but we are sure that it will have a lasting influence in spreading the gospel of Adult Education.

Publications

The *Ontario Library Review* has been published quarterly and is sent to all libraries, librarians, and library trustees in the Province. The August number of the *Review* contained "A reading list in English History." A reprint was ordered and a copy mailed to every High and Continuation School.

Work of the Public Libraries Branch

The work of the branch has been carried on during the long illness and since the death of the Inspector by the members of the staff under the direction of the Deputy Minister. Every member has been loyal and the kindly spirit of co-operation that has been manifest has made the work a pleasure.

I present below a statement of the statistics of the Public Libraries of the Province.

S. B. HERBERT,

Acting Inspector of Public Libraries.

Toronto, February 6th, 1930.

Six new libraries were added during 1928.

Two were added to the list of Free Public Libraries, Danforth Branch of the Toronto Public Library and the South Branch of the Walkerville Public Library.

Four Association Public Libraries were added during the year. These are Alvinston, Bruce Mines, Fulton and Oil Springs.

APPENDIX K

REPORT OF THE SUPERINTENDENT OF THE
ONTARIO SCHOOL FOR THE BLIND

Attendance

The average attendance for the school term which ended June, 1929, was 136. School opened the first week of October, 1928, with an enrolment of 134. During the term, four new pupils were admitted, bringing the total up to 138, of which number sixty-four were girls and seventy-four were boys. The total registration for the twelve months from October 31, 1928, to October 31, 1929, was 159—one less than in the preceding year. At the opening of school in September, 1929, there were 127 pupils in residence.

In September, 1929, thirty-two of the former pupils, of whom nineteen were boys and thirteen were girls, did not return to school, for the following reasons:

- 10 Completed their course.
 - 2 Left to continue their studies in schools for the seeing.
 - 1 To attend sight-saving class.
 - 1 Had too much sight.
 - 2 For eye treatment.
 - 4 On account of ill-health.
 - 1 Not suitable.
 - 3 Indifference of parents.
 - 1 Died.
 - 3 Found employment before completing their course.
 - 2 To attend Toronto Conservatory of Music.
 - 2 Reasons unknown.
-
- 32 Total.

Changes in the Staff

Except for one change, the teaching and executive staff of the Ontario School for the Blind remains the same as last year. The resignation of Miss Emma Moffitt, literary teacher, was accepted, Miss Moffitt wishing to continue her studies at Queen's University. Her place has been acceptably filled by Miss Ruth Taylor, of Petrolia.

Health of the Pupils

There were several cases of serious illness in the school during the year. In October, one boy in an accident sustained a slight fracture of the skull, which kept him in the hospital for about a month. In December, another lad underwent an operation which was badly needed for a rupture, with the very satisfactory result of a great improvement in his physical condition. On Christmas Day a young boy from the west was stricken with what was at first thought to be cerebral meningitis, and was at the point of death for several days. His mother came on from the west to nurse him and, on his recovery several weeks later, it was thought best for him to return home, but he pleaded to be allowed to remain. In April, another child required an immediate operation for acute

appendicitis. Still another boy was sent home after a protracted illness, and, unfortunately, died a month later. There was one case of scarlet fever which was sent to the isolation ward of the General Hospital.

The most strenuous time of the year, as far as the health of the pupils was concerned, commenced during the Christmas holidays. With every precaution taken, it was impossible to escape the epidemic of influenza which was prevalent throughout the country at that time. Most of the Ontario pupils had returned to their homes for the holidays, but practically all of the remaining students contracted the disease, mostly, however, in a mild form. In an effort to check the spread of the disease, the opening of school after the Christmas vacation was postponed until the second week in January. It was impossible on account of the activity of the epidemic in the city and vicinity to get adequate nursing assistance, and in the emergency two of the teachers who had remained on duty turned in and gave untiringly of their services and, fortunately, every child in the school recovered.

The health of the pupils is carefully watched. Their diet is given strict attention. Regular hours of retirement and plenty of exercise are insisted upon. In the winter, when outside exercise is often impossible, special classes are held in the gymnasium, under the very excellent supervision of our physical director. A trained nurse is always on duty in the school hospital to give immediate attention to any slight illness. The children are sent once a year to the dentist for a thorough examination of their teeth, and any work required is done for them.

Just before the opening of the fall term, the prevalence of infantile paralysis throughout the Province of Ontario offered cause for some alarm. Notices were sent out in September to parents of pupils residing in the affected districts, advising them that a health certificate would be required from each child on return to school. In one case, where it was felt that the child might have been exposed to the disease, that pupil was kept at home until all danger was past.

Louis Braille Cup

To celebrate the centenary of the birth of Louis Braille, author of the Braille system of dot writing which is universally used by the blind, Fred. C. Johnson, a friend and former pupil of the Ontario School for the Blind, offered a silver cup, to be known as "The Louis Braille General Proficiency Cup." This cup is to be donated in miniature each year to the girl considered to be the most proficient, not only in general scholarship, but also in deportment. The name of the girl selected each year is engraved on the large cup, which remains the property of the school.

During the summer, news came of the death of Mr. Johnson, the donor of the cup. His death is a real loss to the blind of this province. A very successful business man, his own interests never crowded out the fine sympathy and kindly friendship he showed for all people similarly affected.

June Concert

The June Concert was held this year on the evenings of June 17th and 19th. The hall was crowded both nights: in fact, on the second night, over a hundred people had to be refused admittance. An excellent programme was presented. A special feature of it was an attractive playlet given by the Junior pupils in delightful flower costumes, which were made by the teachers in charge. The minuet, danced by eight of these small children, some of whom were totally blind, was beautifully handled.

A number which is always popular at our concerts is the one put on by the gymnasium classes. This year, it consisted of a remarkable demonstration of mat work by nine boys of different ages and classes, as performed by the physical classes in the Kingston Military Academy. It is always a revelation to seeing people when they realize that such feats can be performed by the blind.

The musical numbers were splendid. Two of the girls who gave such creditable piano selections are this year studying at the Toronto Conservatory of Music, and one of them is studying under a scholarship offered by the I.O.D.E. to the blind.

The whole tone of this year's concert was in keeping with the high standard of excellence set by concerts of previous years. During the evening, awards were made of different trophies won by pupils in athletic events in the school.

Athletic Events

The big athletic event of the year was the return visit of the athletes from the New York State School for the Blind at Batavia. In May, 1928, eight of our boys were taken to Batavia to compete with their students for the possession of a silver cup donated by the New York School. We were successful in the competition, and, in May, 1929, the Batavia students came to Brantford to reclaim the cup. The weather was cold and rainy, but failed to dampen the ardour of the competing teams, and the Ontario School for the Blind, successful in three out of five events, retained possession of the trophy. We were especially proud of our success, inasmuch as the Batavia boys were very sturdy opponents.

The regular Field Day of our school was held on the first of June, both boys and girls taking part. Even the smallest children participated in the events. After the activities of the day, a picnic supper was served to all the pupils in the park grounds, and in the evening a dance was held in the gymnasium in honour of the victorious athletes.

Meeting of the Alumni

In the latter part of June, after the close of the school term, the Alumni Association held its fifth biennial meeting at the school. One hundred and sixteen former pupils attended from all parts of the province and, as on previous occasions, there was much delight shown in the meeting of old friends. Mr. Fred. Johnson, of Toronto, whose death took place a few weeks later, did much to contribute to the pleasure of the Reunion. His genial good fellowship was in evidence everywhere, and he provided many treats which were highly relished. Letters and telegrams were received in abundance from members who were unable through illness and other reasons to be present.

Rev. H. L. Roberts, of Colborne Street United Church, Brantford, offered the invocation, and an address of welcome was given by the Superintendent, after which the evening was devoted to dancing and other entertainment.

The main feature of the programme this year was the reading of essays on the topic, "Has Blindness Its Compensations?" and the awarding of prizes to the winners. The prizes were awarded in order of merit to Edna Tolton, Guelph; Robert Troughton, Arthur; John Murray, Toronto; Elizabeth McCallum, Wallacetown; and Winnifred Davison, Toronto.

Thoroughly enjoyable addresses were given by Mr. W. G. Raymond, ex-M.P., and Mr. Rixon Rafter, of the *Arthur Enterprise*, taking the form of reminiscences. Appreciation was extended to Mr. and Mrs. Donkin, whose unselfish services were largely responsible for the success of the meeting. The

newly elected officers were:—Mr. Rixon Rafter, President; Miss Ethel Squair, 1st Vice-President; Mr. S. C. Swift, 2nd Vice-President; Mr. W. B. Donkin, Secretary-Treasurer.

Standard of Eligibility of Pupils Admitted

Many applications for admission to the school have been made during the past year in behalf of children who are sub-normal mentally, and it is increasingly difficult to convince those interested that the school cannot admit them. Unfortunately there seems to be no provision made for blind children of feeble intelligence, and resentment at refusal to admit them is natural. The parents of normal children object to having feeble minded blind children associating with their either in the classrooms, the dormitories or in the play ground.

The Future of Our Graduates

As the time draws near for our pupils to sever their connection with the school, it is natural that they should have some concern about the future. The care-free days of their earlier school career give way to real anxiety, as they are faced with the problem of going out into the world of seeing people to make a living for themselves. They are by no means all equipped to face the problem without tolerant and sympathetic consideration from those who are the employers of labour. It is a matter of satisfaction that the Canadian National Institute for the Blind of Toronto has officials who make it their business to secure employment for many of our graduates and place them in the niche in which they best fit. During the past year, many young men and women have been admitted to different business concerns where they have been given an opportunity to demonstrate their ability to do work almost as well as those who have sight. The Director of the Canadian National Institute for the Blind in Toronto and his staff have kept in close touch with the school with the object of placing the pupils in good positions as soon as possible after they leave.

W. B. RACE,
Superintendent.

Brantford, January 21st, 1930.

PHYSICIAN'S REPORT

Sir,—I beg to submit my annual report as Physician to the Ontario School for the Blind.

The past year was a rather busy one in the School Hospital. An epidemic of influenza broke out in the school during the Christmas holidays. About half of the students had remained at school during vacation, and practically every one contracted the disease. The epidemic lasted for five weeks, in spite of the precaution taken by delaying the return of the other pupils.

In the early fall one of the boys was struck by a motor car and injured. He was cared for in the General Hospital.

In the spring there were eight cases of measles and fortunately only one of scarlet fever.

There were two operative cases, one for acute appendicitis and another for hernia. Both cases recovered nicely without complications.

One cerebral case gave some anxiety for a while, and another boy—a brain case—was finally returned to his home, where he subsequently died.

Respectfully submitted,

J. A. MARQUIS.
Physician.

DENTAL SURGEON'S REPORT

Sir,—I have the honour to submit the following report for the year ending October 31st, 1929.

The teeth of the pupils have been taken care of with the following work done:—

Boys—Fillings inserted, one hundred and thirty-six. Extractions, four permanent and thirteen deciduous teeth.

Girls—Fillings inserted, one hundred and twenty-four. Extractions, ten permanent and fourteen deciduous teeth.

I wish to express my admiration for the manner in which the pupils conduct themselves while in my office. Whether undergoing treatment or passing the time in the waiting-room, their behaviour is excellent. I think such comment is due them for this survey extends over a number of years.

I would extend to the Principal and his staff my thanks for their co-operation.

Respectfully submitted,

J. R. WILL

REPORT ON MUSICAL INSTRUCTION

Sir,—I have the honour of presenting my Report on the Department of Music in connection with the Ontario School for the Blind, Brantford.

The annual examination which took place in the week of June 3rd, included the following practical and theoretical subjects: Piano, Organ, Violin, Solo-singing, Part-singing, Harmony, Musical Form and Musical History.

In Piano Playing—

Introductory Grade: Six passed, four with honours.

Elementary Grade: Five passed, four with honours.

Primary Grade: One passed.

Junior Grade: Eight passed, four with honours.

Intermediate Grade: One passed.

Organ—

Elementary Grade: One passed.

Intermediate Grade: One passed.

Violin—

Elementary Grade: Two passed.

Primary Grade: One passed with honours.

Singing and Voice Production—

- Elementary Grade: Four passed, one with first-class honours, and one with second-class honours.
 Junior Grade: Three passed, two with honours.

Harmony—

- Junior Grade: Of eight candidates, one only failed, four gained honours.

Musical Form—

- Intermediate Grade: Two passed with honours.

Musical History—

- Intermediate Grade: Two passed, one with honours.

I find that the general work of the Piano class is good; several students showing quite exceptional natural talent. There are great possibilities in this particular branch of study; but, in order that the best possible results may be obtained, it is essential that more frequent lessons be given. I venture to suggest further, that a system of supervision of the practice hours, especially in the case of the younger students who are in the formative stage, is very desirable. This additional interest in each student's work would tend to quicken the growth of their musical perception. The supervision would ensure correct results, preventing the formation of bad habits, and as a consequence, would save considerable time.

The present staff of teachers, Mr. F. Lord (Musical Director), Miss Z. Perry, A.T.C.M., and Miss S. Miller, a former student in the school, is an excellent one, and their teaching is based on the best methods possible.

In addition to the piano students who took the regular school examination, I tested two "progressive" students who played extremely well.

Organ.—Two lads were examined. Both have good natural talent. With further careful training they should become capable church and recital organists.

Again I would venture to hope for a larger class of organ students next year.

Violin.—This class is a small one, but the work accomplished under Mrs. F. Lord's able guidance is distinctly promising.

Singing.—In solo singing there is a gratifying improvement. The selected songs were sung with good phrasing, fair breath-control and production, and capital enunciation.

Choral Class Singing.—The Choral Class, under the conductorship of Mr. F. Lord, is an outstanding feature of the musical life of the school, and is now in a very efficient state. The compositions by British composers were well chosen, and the performance of both accompanied and unaccompanied numbers was excellent.

A Junior Children's Class of thirty-six members, trained by Miss S. Miller, sang their little pieces with much charm.

A quartette of senior lads performed a selection most effectively.

Theoretical Subjects.—The Junior Harmony Class did good work. This class is conducted by Miss S. Miller. The Intermediate History and Musical Poem were satisfactory as a whole, but a little more attention to detail is necessary.

No candidates were presented in Counterpoint or in the Rudiments of Music classes.

In the interest of the younger students, I recommend that these classes, particularly the one in Rudiments, should be resumed as soon as possible, and that the teaching should include the practice of expressing in Braille type, the fundamental principles of musical knowledge.

The Tuning Class, with sixteen members, is doing really good work under the guidance of their able instructor, Mr. Ansell. The tuning of the twenty pianos in the Main Building is done by Mr. Ansell and his young pupils. Most of these students are good tuners and are also able to deal with mechanical difficulties in pianos and reed organs in a remarkably efficient way.

In conclusion, I extend my congratulations to the courteous and able Principal, Mr. W. B. Race, and to his staff of assistants on the general efficiency and discipline of the whole school.

I have the honour to be, Sir,

Yours obediently,

ALBERT HAM.

LITERARY EXAMINER'S REPORT

Sir,—Herewith I beg to submit my report as Literary Examiner at the Ontario School for the Blind for the school year ending June, 1929.

The Staff.—The Staff, headed by Principal Race, are all duly qualified teachers. They are all interested in their work and devote much time and energy to preparation and presentation of work to the classes. The pupils co-operate with the teachers and are interested in their work, the result being that progress is made by practically every pupil.

The Course of Study.—The course of study is the same as that used in the Public and Separate Schools and in the Junior Grades of High Schools. No art is taught, but the course in Literature and History embraces more than is taught in the regular schools of the province. I am pleased to see that the pupils are very conversant in current events and the staff deserves great credit for this standing.

Mr. Cole's Class.—Mr. Cole has charge of the Fifth class and has succeeded in bringing the pupils to a high standard of proficiency. In Literature, the class had studied the Merchant of Venice and showed a knowledge in detail of the play and the literature of the period. In Ancient History much ground had been covered and the pupils were familiar with the work. Great interest is shown in History. In Physics, a wide course had been covered and the pupils were well up in the work. If experiments could be performed, this would prove one of the most interesting subjects on the curriculum. Perhaps the greatest advancement noticed in this class was in Algebra and Geometry. The pupils have very alert minds and enjoy the geometry.

Mr. Langan's Class.—Mr. Langan has charge of the Entrance Class and has given them a good grounding in the work. His class of twenty were given a written test quite on a par with the Departmental Entrance Examinations, and fourteen made a very creditable pass. Mr. Langan is doing good work.

Miss Draper's Class.—Miss Draper is in charge of the Senior III class. I examined this class in Arithmetic, Composition, Spelling, Literature, Geography,

Writing and History. The knowledge and appreciation of Literature was more than I expected. This class did well in Arithmetic, History and Geography, and exceptionally well in Spelling. The Writing and Composition were good.

Miss Moffitt's Class.—Miss Moffitt has been on the staff for some years and has the work well in hand. She has charge of the Junior III. This class did excellent work in Geography, Spelling and Literature and good work in Composition, Reading and Arithmetic. The work in History was not quite so good, but was commendable.

Miss Snetsinger's Class.—Miss Snetsinger is an energetic worker and has charge of the Second Book classes. I examined this class in Reading, Spelling, Literature, Arithmetic, Writing, Geography and History and found them generally proficient except in a few cases. These cases being those of pupils who had entered the school during the year and had not received the foundation training of the others. Miss Snetsinger is doing good work with her class.

Miss O'Donohue's Class.—Miss O'Donohue is in charge of the First Book class. She is energetic and secures the interest of her pupils. This class has suffered somewhat from pupils entering during the year, but is doing quite satisfactory work. The pupils who had been in attendance during the year showed evidence of progress in Arithmetic, Reading, Composition, Spelling, Geography and History. Those who had entered during the year were not so well up in the work. I consider that Miss O'Donohue has done good work during the past year.

Miss Babb's Class.—Miss Babb has charge of the Kindergarten class and is particularly suited for the work. The pupils learn to read here and the majority of them showed much progress. The Arithmetic and Spelling in this class were excellent. The pupils were familiar with the fundamental principles in Hygiene. Three pupils of this class are very backward, but it is not due to lack of interest or ability on the part of the teacher.

Manual Training and Household Science.—The Manual Training is in charge of Mr. Donkin. His methods of teaching and his handling of the pupils is excellent. The work done by these pupils is beyond what one would expect, and reflects credit on both instructor and pupils.

The Domestic Science is in charge of Miss Behrns and Mrs. Strowger. The former gives the girls a good course in cooking and sewing, while the latter instructs in knitting. The exhibit of work done by the girls was very fine indeed.

Typewriting.—Miss Kellett gives instruction in typewriting to a number of pupils. She uses good methods in her teaching and the results were very satisfactory.

Physical Training.—The physical training is given by Major Clegg. He has succeeded in making a great improvement in the physique of both boys and girls. The pupils do their exercises with accuracy and precision. I was pleased to note that our school was successful again this year in the International competition.

E. E. C. KILMER, B.A.,

Literary Examiner.

OCULIST'S REPORT

Sir,—I have the honour to report the results of the ocular examinations of the new pupils entering the Ontario School for the Blind, October, 1929.

There were twenty-three new pupils presented for eye examination, thirteen of whom are males, and 10 females.

Condition of Sight

	Male	Female	Total
1. Limited objective vision in both eyes.....	7	7	14
2. Limited objective vision in one eye.....	4	1	5
3. Quantity of Perception of Light in both eyes.....	1	1	2
4. Perception of Light in one eye, none in other.....
5. Without Perception of Light in either eye.....	1	1	2
	<hr/> 13	<hr/> 10	<hr/> 23

One of the unusual things met with in this group of pupils is the fact that many of them have some vision in one or both eyes. Fourteen of the twenty-three are able to see in varying degrees with both eyes. It is not sufficiently good enough, however, for them to obtain a visual education, but it is sufficient for them to see to get about the school. One of the most encouraging things in this year's class is that there are only two who are totally blind in both eyes. This is a much smaller number than usually met with.

Diseases Causing Blindness

	Male	Female	Total
1. Optic Atrophy.....	1	..	1
2. Cataract (Congenital).....	3	3	6
3. Ophthalmia Neonatorum.....
4. Injury to one eye followed by Sympathetic Ophthalmia in other.....	2	..	2
5. Injury to both eyes.....	3	..	3
6. Choroiditis.....	1	1	2
7. Microphthalmus (Congenital).....	1	3	4
8. Myopia.....	..	1	1
9. Iritis and Uveitis.....	..	1	1
10. Keratitis.....	2	1	3
	<hr/> 13	<hr/> 10	<hr/> 23

Cataracts of the congenital and juvenile type produce the chief causes of blindness, there being six cases in this class. Then follow four cases of Microphthalmus, all of which were due to some condition affecting the eyes at birth, or during pre-natal life. There was no case which could be definitely traced to being a result of Ophthalmia Neonatorum, although in this latter group of cases, and in one of the Keratitis class, our suspicions would be in favour of a Neisserian infection at birth.

Injury to one eye, followed by Sympathetic Ophthalmia—two cases. Injury to both eyes—three cases—all occurring in boys; two of these were caused by explosions at the time of life when youthful inquisitiveness is at its height. There were no cases of Retinitis Pigmentosa or Interstitial Keratitis.

A number of the former pupils were examined, and in two or three cases, improvement in their sight was noted. In one or two others, recommendation for glasses was made. We did not find it necessary to advise any operative interference for any of the pupils as, apparently, they had all received medical attention before coming to the school, and nothing further could be done to improve their condition.

Respectfully submitted,

NORMAN BRAGG.

APPENDIX L

**REPORT OF THE ACTING SUPERINTENDENT
OF THE ONTARIO SCHOOL FOR THE DEAF**

Permit me to submit for your consideration our annual report for the year ending October 31st, 1929.

At the opening of school on September 12th, 1928, our attendance was 295, being composed of 166 boys and 129 girls, and at the closing in June, 1929, there were 304 pupils, our average attendance during the session being 303.

During the session, we were visited by a general epidemic of influenza, which almost broke up the classes, but which, I am pleased to state, showed great devotion on the part of the officers, the supervising staff and teachers to the care of those afflicted, as well as by the Nurse and Doctor in charge,

The work of the school has progressed satisfactorily, as will be shown by the report of the Inspector, Mr. H. J. Clarke.

The physical education of the children, under our care, has been, I am sure, as well attended to as could be done without a gymnasium. In a large school, such as this, the need for regular physical exercise is apparent, and a gymnasium, properly fitted out, would be of great assistance in maintaining the health and vigour of our boys and girls. However, we have an efficient athletic committee, into whose plans the children enter so heartily, that they obtain a great deal of benefit in this way.

The social side of the education of the pupils has been well attended to, that they may be able, when they leave our care, to go among their fellow citizens as one of themselves.

The work of the farm and the shops has been well conducted and, on the whole, the past efficiency of the work here has been maintained. Improvements have been made in the Engineer's department, two Jones' stokers having been installed, and are apparently giving satisfaction.

A new bus has been furnished us, through the Public Works Department, for work between the school and the city. This fills a great need and we are pleased to have it.

Our sewage system is being connected with that of the City of Belleville, which will, I am sure, prove very satisfactory, when completed. On the whole, we feel, when looking back over the past year's work, that the primary object of our existence has been kept constantly in view, to the end that those unfortunate in the absence of hearing may go out among their fellows as little handicapped as possible.

The report of the Literary Examiner, H. J. Clarke, B.A., and that of Dr. Boyce, the Attending Physician, are hereto appended.

In closing, I wish to thank you, Sir, and your Deputy Minister, Dr. Colquhoun, for the courtesy and assistance given me during the time I have been Acting Principal.

I have the Honour to be, Sir,

Your obedient servant,

WM. J. CAMPBELL,
Acting Principal.

Belleville, November 1st, 1929.

Literary Examiner's Report

I beg to submit herewith my report on my recent inspection of the Literary Classes in the Ontario School for the Deaf.

Before proceeding, however, to my report proper, I wish to again express my deep regret that your late Superintendent, Dr. C. B. Coughlin, was not spared for a little while longer to see the full accomplishment of his ideas and ambitions for that school, which, with the loyal support of yourself and the other members of the teaching staff, he was able to carry to so high a degree of proficiency. Having been privileged to officially inspect the school, practically, from the time that the late Superintendent took charge, I have seen the development of the school and am, therefore, perhaps better qualified to give an opinion than anyone else in the province. Doctor Coughlin came to a school that was officially known as "An Institution." He left it a "School" in the best sense of that word. The change from a Manual School to practically an Oral School has, beyond any question, been of immense importance to the children who have come under the influence of the school. They now go out into the world with a better equipment, with which to meet the hearing part of the population, and are thus better able to compete in the race for life. I know that the average pupil is more alert than formerly. But I need not go on with these points,

which are known to the parents whose children have been in the school since Doctor Coughlin took charge. He is gone, but the school he has left behind him is the finest possible monument to a man, who gave so many years, gave so much of himself for the betterment of the conditions of the deaf of the province.

I have spent rather more time than usual in the inspection this school year owing to the interruption that occurred when the late Superintendent died so suddenly during my Autumn visit of inspection. I have gone thoroughly into the workings of each class in the school, and I am pleased to be able to report to you that I found a satisfactory state of proficiency in every class, where it could be expected. I found the teachers, one and all, intensely interested in their work, and with the love and confidence of the children. From the nature of things here, your teachers are privileged to get nearer to the hearts of the pupils than is possible in a public school. While the children are small, the teachers perform the duties of parents to the little people during the school year, and, on many occasions, I have been deeply touched at seeing some little chap cuddle up to his teacher, whose loving arm about him went a long way towards supplying the mother-love that he consciously or unconsciously wished for at that particular time. A year ago, I reported upon the excellent spirit of harmony that prevailed among the members of the staff. It gives me pleasure to report that I found the same spirit at this inspection, and I compliment you, Sir, on being able to hold the esteem and support of the whole staff while acting in your present capacity. In this respect, I have just one regret, namely, that it was not found convenient to relieve you of part, at least, of your duties as an instructor, while you are acting as Superintendent. However, matters are moving along smoothly, and the Minister of Education was fortunate in his choice of an Acting Superintendent. Your long and successful experience in the school gives you a knowledge of conditions and a sympathy that was particularly necessary in this sad interim.

Your teaching staff, reporting as they do regularly on their several classes, it is not necessary for me to recapitulate my findings in individual classes, particularly as we discussed many of these matters during my recent visit. I would, however, like to refer briefly to the class doing secondary work. You understand that I was not supposed to inspect that class this year, nor did I do so, but at the same time, I did see them at work. I do not intend to comment in any way on the nature of that work, for that will doubtless be dealt with by the High School Inspector, who made the inspection. I would, however, like to say just this much, that it is a source of great satisfaction to me to see it demonstrated that this grade of work can be successfully done in your school. This was one of the things most desired by Doctor Coughlin, and he was spared long enough to see this class well started. I shall watch their progress with interest, whether or not I am privileged to inspect them.

A year ago, I commented on the excellence of your Course of Study, providing, as it does, a complete course for the child who is able to go no further than the Junior Department, as well as for those of greater capacity, who are able to complete the Senior Department prescription. What I mean to imply is that each department is a unit in itself, and at the same time, blends naturally in the department next above it. There will, no doubt, be changes that are desirable from time to time, but as a whole you have a very fine outline of work laid down.

I referred at some length a year ago to the two scientific appliances that had recently been installed, the Audiometer and the Radio-Ear. The former gives an exact indication to the instructor as to how much hearing there is to

deal with. It will also show definitely whether or not that residual hearing is developed by the treatment with the latter machine. I did not inquire particularly whether this had been tested out by actually measuring again the hearing with individual pupils, but I did see the Radio-Ear in use, and I am perfectly satisfied of its value as a medium of instruction, particularly in giving the child inflection, etc., that he would otherwise be unable to hear. And the children undoubtedly derive a great deal of pleasure from the machine. No person can say what it is worth to those deaf children to be able to sit there and hear musical selections. One has to see the pleasure in their faces to appreciate what it is meaning to them.

I was particularly interested this year in the rapid development that has taken place in the Rhythmic work. I cannot describe in words what I saw. It has to be seen to be appreciated, but the way these little people have developed along this line is simply marvellous. To me that "Orchestra" is simply wonderful. I wish to compliment most heartily the teachers who are carrying on this work, which must undoubtedly greatly help the children.

If I may be permitted to offer a suggestion, it is this:—"In the matter of classification, I would recommend a greater use of what is called "Ungraded" classes for pupils who, from any cause, are not able to move along at the same rate as the others. It would be better for the children who are able to go faster, and it would be better for the slower ones, as they would get more individual attention and would move along just as fast as they are able to go. In such a class, each child would be practically a class by himself and would, therefore, never have to wait for someone else, nor would anyone else be waiting for him.

In conclusion, let me express to you, and through you, to the staff, my deep appreciation of the courtesy shown me during my inspection. Everyone seemed ready and anxious to give me every opportunity to know exactly what was being done, and I appreciated it very much.

All of which is respectfully submitted.

H. J. CLARKE,

Public School Inspector,

South Hastings, Belleville and Trenton.

Physician's Report

The opening of school in September brought together three hundred children, all in a condition of health that enabled them to begin their class-room work.

From the beginning of the session until December 1st, we had very little acute sickness and, consequently, very little loss of school time. During this period, our attention was given to the improvement of those, whose general health was below par, the better to fit them for the session's work.

From early in December until the end of January, we had more than the average amount of sickness, and at one period, the school was pretty well disorganized because of the epidemic of influenza, a condition which at that time was pretty general throughout the province. The first few cases were mild and occurred during the second week of December. During the following two weeks, two hundred were taken down and confined to bed. A number were seriously sick, a few were complicated with pneumonia and broncho-pneumonia, but on the aggregate the epidemic would be considered a mild one, and without

an exception, all made a satisfactory recovery. Excepting the complicated cases, the average duration of acute symptoms was five to seven days, and the loss of school time from two to three weeks. The convalescent period was somewhat protracted, as is ordinarily the case with this disease, but the children—many of them still under treatment—were kept at school.

I feel that, as School Physician, I may be privileged to say a word in praise of the splendid assistance given by members of the staff at this time, when their aid was so much needed.

In April, we had an outbreak of chicken-pox. The children generally were not very sick, but isolation and quarantine were necessary. It was of trifling importance excepting that it kept the children from school.

In my report, I am omitting mention of temporary indisposition or unimportant and trifling ailments, of which we had the ordinary average number.

The following may be especially mentioned:—Asthma, 4; bronchitis, 13; pneumonia and complications, 6; tonsilitis, 13; pleurisy and empyemia with resection of rib, 1; heart disease, 4; abscess, 4; otitis media acute, 3; inflammatory rheumatism, 1; vincent's angina, 1; skin diseases, 8; fracture and fracture dislocation, 2; minor accidents and wounds, 16; scarlet fever, 4; gastrointestinal infection, 20; inflammatory croup, 1.

The session of 1928-29 will be remembered because of the death of our Superintendent, the late Dr. Coughlin. He had been in poor health for some time, but his passing was sudden and unexpected—a great loss to the school and deeply regretted by those associated with him in advancing the progress of the school and the welfare of the children.

I am, Sir,

Yours respectfully,

W. W. BOYCE,
Physician.

III.—GENERAL

Elementary and Secondary Schools

	1928	Increase for the year
Total number of schools: Day, 7,656; Evening, 107.....	7,763	61
Total number of Day full-time teachers: men, 3,828; women, 15,831	19,659	324
Number of vocational part-time or occasional teachers (142 supervise or teach also in High School).....	204	33
Total number of Day teachers.....	19,863	453
Total enrolment of schools:		
Elementary (January-December, 1928):		
Day.....	641,128	6,536
Evening.....	3,346	175
Secondary (September, 1928-June, 1929):		
(1) Academic:		
Day.....	66,953	69
Evening.....	3,128	759
		(Decrease)
(2) Vocational:		
Day (full-time, part-time, special).....	26,730	2,217
Evening.....	41,593	2,497
	782,878	11,735
*Number of students in Elementary and Secondary Day Schools for the calendar year 1928.....	702,330	9,848
Number of students in Elementary and Secondary Day and Evening Schools.....	750,397	11,759
Percentage of Ontario's population in attendance at Day and Evening Schools.....	24.8	
Total expenditure by Municipalities.....	\$52,389,674	\$3,879,459
Legislative grants received.....	\$5,100,983	\$162,406
Net expenditure of Municipalities.....	\$47,288,691	\$3,717,053

*This figure is less than 734,811 (the total enrolment of Elementary and Secondary Day Schools) by 32,481, those who entered Secondary School for the first time during 1928.

Comparative School Statistics, 1912-1928

I.—ELEMENTARY SCHOOLS

1. Day School Attendance

Year	Total Enrolment	Boys	Girls	Average Daily Attendance	Percentage of Average Attendance to Total Enrolment	Percentage of Aggregate to Possible Aggregate, i.e., Percentage of Actual to possible Attendance
1912.....	467,022	239,187	227,835	291,210	62.35
1917.....	527,664	266,255	261,409	342,571	64.92
1922.....	601,485	306,225	295,260	425,018	70.66	86.80
1926.....	623,231	318,224	305,007	444,236	71.28	88.01
1927.....	634,592	324,138	310,354	456,978	72.01	88.49
1928.....	641,128	327,713	313,415	459,847	71.72	89.09

In arriving at the possible aggregate, all the school days for the term of a pupil of non-compulsory age, and all the school days of a child of compulsory age, are counted, except in case of illness, properly certified, or of exemptions allowed by law, so long as he is a resident of the school section or until he is registered in a secondary school.

Duplications of enrolment in elementary schools owing to removals from one elementary school to another during the year, or owing to transfer to secondary schools, are carefully avoided in this calculation.

The percentage of average attendance to total enrolment, viz., 71.72, is low owing to the fact that a pupil once entered on the roll, if only for a few days, is counted in the enrolment for the year. The percentage of actual to possible aggregate attendance (89.09) as given above, represents correctly the situation as regards regularity of attendance in the elementary schools.

2. Classification of Pupils

(A) RURAL

Year	Kindergarten	Kindergarten-Primary	Form I	Form II	Form III	Form IV	Form V*	Total	Percentage of total Enrolment
1912.....			93,005	43,775	42,450	44,049	3,984	227,263	48.67

XI. SUPERANNUATED TEACHERS

(Ryerson Superannuation Scheme)

Summary for Years 1912-1929

Year	Teachers on List	Expenditure for the Year	Gross Contributions to the Fund	Amount Refunded to Teachers or to the Estates of Teachers
1912.....	297	\$ 52,696 90	\$ 4504 65	\$ 443 01
1917.....	245	48,232 00	4353 60	810 92
1922.....	159	55,799 75	4 00	73 80
1927.....	91	31,334 50
1928.....	82	29,977 00
1929.....	72	24,851 00	1,052 55

The annual allowance to each Superannuated Teacher was increased by the Legislature in 1920. Payments are at the rate of \$11 per year of service instead of at \$6 as formerly.

†For fiscal year ending 31st October.

XII. HIGH SCHOOL ENTRANCE EXAMINATION RESULTS

Year	Sr. IV Enrol- ment	Candidates		Successful Candidates						Number who attempted the written test

VOCATIONAL SCHOOLS

XVII. MISCELLANEOUS:

Aviation	71
Science of Pulp and Paper Making	14

OCCUPATION OF EVENING PUPILS ON

ENTERING SCHOOL:

Textile Industries	496
Chemical Industries	239
Sheet Metal Work	237
Machine Shop Work	2,129
Forge Work	230
Foundry Work	343
Leather Work	198
Cabinet Making and Joinery	466
Carpentry and Building Construction	928
Painting and Decorating	307

Plumbing	596
Power Plant Operating	421
Electrical Work	1,072
Printing and Bookbinding	651
Photography, etc.	70
Other Trades	3,063
Commerce	6,988
Teaching	784
Nursing	169
Civil Service	655
Mining	472
Farming	211
Art and Design	247
Women at work in factories	2,530
Women at work in shops and stores	2,054
House Workers	1,945
Housekeepers	3,418
Other Occupations	7,173
Without Occupations	3,840

VOCATIONAL

XIX	Prescott (in part); Towns of Hawkesbury, Vankleek Hill.....	F. Choquette, B.A.....	Hawkesbury.

B—Secondary Schools

1. High Schools and Collegiate Institutes:

I. M. Levan, B.A.
R. W. Anglin, M.A.
A. J. Husband, B.A.
W. A. Jennings, B.A.

2. Continuation Schools:

G. K. Mills, B.A.
J. P. Hoag, B.A.
J. P. Cowles, B.A.

3. Technical Schools:

D. A. Campbell, B.A.
F. S. Rutherford, B.A.Sc.
Miss A. M. Hamill, B.A.
L. S. Beattie, B.A.

Address:—Toronto, Parliament Buildings.

TABLE 21

SUMMARY OF HIGH SCHOOL ENTRANCE EXAMINATION RESULTS, 1929

Enrolment, Senior Fourth Grade, 1928.....	61,866
Number of High School Entrance Candidates:	
Recommended by Principal on Group II.....	13,314
Taking written test on Group II.....	33,483
	46,797
High School Entrance candidate percentage of 1928 Senior Fourth enrolment.....	75.64
Number of candidates successful on written test on Group II:	
By Regulation II—(1) and (2).....	23,150
—(3) and (4).....	991
—(5).....	371
—(6).....	334
	24,846
Total number of successful candidates.....	38,160
Percentage of all candidates who were successful, 81.54 (28.45 by Principals' recommendation and 53.09 by passing the written test.)
